CITATION

2010 Census Summary File 2 – [name of state¹ or United States]/prepared by the U.S. Census Bureau, 2011.

TYPE OF FILE

Summary statistics.

SUBJECT CONTENT

Summary File 2 (SF 2) contains the data compiled from the questions asked of all people and about every housing unit. SF 2 includes population characteristics, such as sex, age, average household size, household type, and relationship to householder such as nonrelative or child. The file includes housing characteristics, such as tenure (whether a housing unit is owner-occupied or renter-occupied), age of householder, and household size for occupied housing units. Selected aggregates and medians also are provided. A complete listing of subjects in SF 2 is found in [Chapter 3, Subject Locator](#). The layout of the tables in SF 2 is similar to those in SF 1.

These data are presented in 47 population tables (identified with a “PCT”) and 14 housing tables (identified with an “HCT”) shown down to the census tract level; and 10 population tables (identified with a “PCO”) shown down to the county level, for a total of 71 tables. Each table is iterated for 331 population groups: the total population, 75 race categories, 114 American Indian and Alaska Native categories (reflecting 60 tribal groupings), 47 Asian categories (reflecting 24 Asian groups), 43 Native Hawaiian and Other Pacific Islander categories (reflecting 22 Native Hawaiian and Other Pacific Islander groups) and 51 Hispanic/ not Hispanic groups. The presentation of SF 2 tables for any of the 331 population groups is subject to a population threshold of 100 or more people. That is, if there are fewer than 100 people in a specific population group in a specific geographic area, their population and housing characteristics data are not available for that geographic area in SF 2. See [Appendix H, Characteristic Iterations](#), for more information.

GEOGRAPHIC CONTENT

Summary File 2 is released as individual files for each of the 50 states, the District of Columbia, Puerto Rico, and the United States. The tables (matrices) are identical for all files, but the geographic coverage differs.

[Chapter 4, Summary Level Sequence Chart](#), outlines the hierarchical and inventory geographic summaries in their entirety. Summary level sequence charts are provided for the state files and for the national file.

¹ This includes the District of Columbia and Puerto Rico.

The SF 2 for states, the District of Columbia, and Puerto Rico provides data for states, counties,² county subdivisions,³ places, ZIP Code Tabulation Areas (ZCTAs), school districts, census tracts, state parts of American Indian and Alaska Native areas, tribal subdivisions, metropolitan areas, and Hawaiian home lands.

The SF 2 national files include summaries for the entire United States, as well as for regions, divisions, states, counties, county subdivisions, places, American Indian and Alaska Native areas, tribal subdivisions, and metropolitan areas. The Urban/Rural Update file includes data for urban (urbanized areas and urban clusters) and rural areas.

Some geographic entities are not shown because the number of people in the specified population group does not meet the population threshold of 100 people in that geographic entity for the specified group.

USER UPDATES

User updates inform data users about corrections, errata, and related explanatory information. However, sometimes this information becomes available too late to be reflected in the tables (matrices) or related documentation. User updates for 2010 Census data products are available on the Census Bureau's Internet site at <www.census.gov/prod/cen2010/notes/errata.pdf>.

RELATED PRODUCTS

Listed below are 2010 Census data products available through American FactFinder and on DVD.

2010 Census Redistricting Data (Public Law 94-171) Summary File. Files containing counts of the total population and the population 18 years and over, by race and Hispanic origin. Counts of occupied and vacant housing units also are included. Data are available down to the census block level, in 52 files—one for each state, the District of Columbia, and the Commonwealth of Puerto Rico. (Release: February–March 2011)

2010 Census National Summary File of Redistricting Data. One file containing the same data tables as in the Redistricting Data (Public Law 94-171) Summary File, but for the United States, regions, divisions, states, and geographic areas that cross state boundaries such as American Indian areas and Core Based Statistical Areas. (Release: April 2011)

2010 Census Demographic Profile. One quick table available in American FactFinder that contains a limited set of counts and cross-tabulations, including age groups, sex, race, Hispanic or Latino origin, household relationship, household type and size, family size, group quarters population, housing occupancy, and tenure. Data are available for the United States, regions, divisions, states, counties, places, and minor civil divisions. (Release: May to August 2011)

2010 Census Summary File 1 (SF 1). Files containing counts and cross-tabulations of information including age, sex, race, Hispanic or Latino origin, household relationship, household type, household size, group quarters population, whether a housing unit is occupied or vacant, and whether the occupied housing unit is owned or rented (tenure). Data are available down to the block level for many tabulations. Other tabulations are available down to the census tract level, and yet others are available only down to the county level. Summary data are included for many geographic areas such as ZIP Code Tabulation Areas (ZCTAs), Congressional Districts (111th Congress), school districts, and state legislative districts. There are 52 individual state files (release: June–August 2011). Summary File 1 is updated with national level data (release: October 2011) and with urban/rural data (planned release: October 2012). Summary File 1 tables for core based statistical areas are planned for release in August 2013. Files and reference maps will be made available through American FactFinder <<http://factfinder.census.gov>> and on DVD.

² Parish in Louisiana; borough, census area, city and borough, or municipality in Alaska; and municipio in Puerto Rico. In Maryland, Missouri, Nevada, and Virginia, one or more cities are independent of counties and are treated as statistical equivalents of counties. The entire District of Columbia, which has no counties, is treated as a county equivalent.

³ In Puerto Rico, some county subdivisions (barrios-pueblo and barrios) are divided into subminor civil divisions (subbarrios).

2010 Census CPH-1, *Summary Population and Housing Characteristics* report series. One report for the United States, each state, the District of Columbia, and Puerto Rico providing selected data and maps for the state, counties, places (incorporated places and census designated places), county subdivisions, American Indian and Alaska Native areas, Hawaiian home lands, urbanized areas, metropolitan areas, and micropolitan areas. Available only on the Internet in Portable Document Format (PDF). (Planned release: 2012)

2010 Census CPH-2, *Population and Housing Unit Counts* report series. One report for the United States, each state, the District of Columbia, and Puerto Rico providing 2010 Census and selected historical population and housing unit counts and maps for the state, counties, places (incorporated places and census designated places) and other county subdivisions, urban areas (urbanized areas and urban clusters), metropolitan areas, and micropolitan areas. Available as a printed report and on the Internet in Portable Document Format (PDF). (Planned release: 2013)

For more information on 2010 Census data products, contact the U.S. Census Bureau's Customer Services Center on 1-800-923-8282 or 301-763-INFO (4636).

INTRODUCTION

This chapter serves as a guide for data users to both the file and the technical documentation. Novice users trying to understand how to use the documentation and the file should read this chapter first.

DATA FORMAT AND ACCESS TOOLS

Flat ASCII files by state are available for download via File Transfer Protocol (FTP) from American FactFinder on the U.S. Census Bureau's Web site <www.census.gov>.

Users can utilize their standard software packages to manipulate the data, which can be easily imported. The geographic header record data are presented in fixed-length ASCII format, and the data file is in comma-separated ASCII format.

The DVD product contains an updated version of the Census 2000 Data Engine software that can aggregate user-defined areas, allows for multiple geographic selections, and creates customized variables and reports. Both the state files and national file will be included as a single DVD product. The software can export files in several formats, including databases and spreadsheets. Files can also be exported for use with popular Geographic Information System (GIS) applications.

GEOGRAPHIC HIERARCHY PRIMER

The smallest component for all census geography is the block. [Figure 2-3](#) at the end of this chapter provides an example of the various geographic hierarchies used, building from the block. Take some time to review this chart to become familiar with the different hierarchies. Begin reading the schematic from the bottom at the blocks entry. By following the lines, you can see the hierarchy very quickly. For example, follow blocks to block groups to census tracts to counties. This path indicates that census

tracts and their sublevels in the hierarchy are uniquely identified within a county and do not cross county boundaries. Follow blocks to the school district hierarchy. This path tells you that school districts can cross jurisdictional boundaries but do not cross state lines. [Figure 2-4](#) at the end of this chapter presents similar information for the American Indian area/Alaska Native area/Hawaiian home land hierarchy. Again, read the schematic from the bottom, beginning with the lowest level of geography, i.e., census blocks.

GEOGRAPHIC HEADER RECORD

The geographic header record, [Figure 2-5](#) at the end of this chapter, defines each field and provides its data dictionary reference name, field size, starting position, and data type. In addition, the presence or absence of an “X” in each summary level column is a guide to the presence or absence of geographic information for that particular summary level. For example, on the column for summary level 040, we see “X” for the first 10 fields, indicating that there will be information for those fields. In the county field, there is no “X,” indicating that there is no information for county in summary level 040. Since 040 is the summary level for state, this is perfectly logical.

New ANSI Codes

The geographic header record includes, for the first time, space reserved to accommodate the transition from the Federal Information Processing Standards (FIPS) 55 Code Series to the American National Standards Institute (ANSI) Code Series for the identification of selected geographic entities. Each of nine fields has eight character spaces reserved for an eight-digit Geographic Names Information System (GNIS) identifier code that has been adopted as part of a new national standard. The GNIS is the nation’s official geographic names repository database and has been designated by the U.S. Board on Geographic Names as the official source of geographic names for use by the federal government and its contractors. Federal agencies are expected to adopt the GNIS ID as a standard code for public and federal data exchange. The fields identified in the geographic header record are:

Field length	Field name
8	State (ANSI)
8	County (ANSI)
8	County Subdivision (ANSI)
8	Place (ANSI)
8	Consolidated City (ANSI)
8	American Indian Area/Alaska Native Area/Hawaiian Home Land (ANSI)
8	American Indian Tribal Subdivision (ANSI)
8	Alaska Native Regional Corporation (ANSI)
8	Subminor Civil Division (ANSI)

The GNIS identifier for states, counties, and equivalent areas are supplemental codes that do not replace the federal standard two-digit state and three-digit county codes also appearing in the header. The Census Bureau will continue to maintain and use in its unique geographic identifiers the existing five-digit codes for place, county subdivision, consolidated city, Alaska Native Regional Corporation, and subminor civil division and will assign and issue codes for new entities to meet customer needs, although these codes are not “official” or part of the new ANSI standards. The Census Bureau also will continue to maintain the existing four-digit codes for American Indian area/Alaska Native area/Hawaiian home land and three-digit codes for American Indian tribal subdivision.

GEOGRAPHIC COMPONENTS

In SF 2, data are tabulated not only for specific geographic entities, such as a specific state, county, or place, but also for geographic components of these entities. Examples of this include all federally-recognized American Indian reservations within a specific entity (e.g., state, nation), all metropolitan statistical areas within the state or nation, portion within micropolitan statistical areas of specific size ranges, and a large number of combinations. These combinations are identified in the field called GEOCOMP, which begins in position 12 of the geographic header record. All possible geographic components are listed in endnote 3 of the identification section of the Data Dictionary (Chapter 6).

CHARACTERISTIC ITERATION

In SF 2, tables are repeated (iterated) for various population groups. The characteristic iteration (CHARITER) field provides a three-digit code indicating the population group being tabulated for the record. A listing of the 331 population groups and their characteristic iteration codes appears in [Appendix H](#) of this technical documentation. This three-digit iteration code is a component of the file name.

Presentation of an SF 2 table for any population group is subject to a population threshold of 100 or more people in the geography being tabulated. For example, if tract xx has 99 people in the Asian alone race group, the iteration tables will not appear for that group. If there are 100 residents in the Asian alone race group, the tables will appear.

SUMMARY LEVEL SEQUENCE CHART

The [summary level sequence chart \(Chapter 4\)](#) identifies each geographic level and provides the code that is in the SUMLEV field. The last geographic area type listed in the sequence identifies the geography of the summary level; the prior codes simply identify the geographic hierarchy.

- 140 State-County-Census Tract
- 144 State-County-Census Tract-American Indian area/Alaska Native area/Hawaiian home land

For summary level 140, the record contains data for a census tract, within a county, within a state. Census tracts are uniquely numbered within a county and do not cross county boundaries. Since counties do not cross state boundaries, this is a simple application. Thus, summary level 140 provides data for a complete census tract.

In summary level 144, the geography is more complex. The key is to work backward through the hierarchy. Thus, summary level 144 is a record for the portion of an American Indian Area (or an Alaska Native area or a Hawaiian home land) within a specific census tract within a specific county within a state.

When reading the summary level sequence chart, it is important to recognize that hyphens (-) separate the individual hierarchies, while slashes separate different types of geography (such as place/remainder) within the same hierarchy.

DATA STRUCTURE AND SEGMENTATION

The data in Summary File 2 and other 2010 Census summary files are segmented. This is done so that individual files will not have more than 255 fields, facilitating exporting into spreadsheet or database software. The data and the corresponding geographic information for an individual state is known as the file set. The file set for a state may consist of up to 3,643 files broken down as follows: a geographic header record file and 11 segment files per iteration (331) for a maximum of 3,641 files, and a packing list. [Figure 2-2](#) provides the file/table details. This file design is comparable to that used in Census 2000.

The geographic header record is standard across all electronic data products from the 2010 Census. A unique logical record number (LOGRECNO in the geographic header) is assigned to all files for a specific geographic entity. This is done so all records for that specific entity can be linked together across files. Besides the logical record number, other identifying fields also are carried over from the geographic header file to the table file. These are file identification (FILEID), state/U.S. abbreviation (STUSAB), characteristic iteration (CHARITER), and characteristic iteration file sequence number (CIFSNUM). [Figures 2-1a](#) and [2-1b](#) provide examples of geographic header information for file01–file11. Codes are shown in parentheses following the data dictionary reference name.

Note to Users of Microsoft Access

Due to the FieldSize property limitations within Microsoft Access, modifications to field types are required when importing the geographic header record file and file01 through file11:

- All fields classified as numeric (N) should be imported as long integers.
- AREALAND and AREAWATR should be imported as text.

Failure to make these changes may result in missing data upon import.

Figure 2-1a.

Chapter 3.

Subject Locator

GENERAL INFORMATION

The Subject Locator is an index designed to quickly identify the tables (matrices) in the summary file. This index is arranged in alphabetical order by the name of a subject. Under each subject heading appears the universe or the type of entry being tabulated (shown in *italics*) and the relevant table number. Each variable is arranged alphabetically by universe, then by variable of cross tabulation, if any. If you are looking for a table tabulating age by sex for all individuals, check the index under either of the two variables ("age" or "sex"). Please note that if the universe of a table (matrix) is "Households," "Families," "Occupied housing units," "Population in households," "Population in families," or "Population in occupied housing units," the universe is classified by the race or ethnic group of the householder. Table PCT 5, "Sex by Age for the Population in Households" is the exception to the rule; the data in this table refer to the race, Hispanic or Latino origin, or tribe/tribal grouping of the person. See [Appendix H, Characteristic Iterations](#), for the list of race and ethnic groups available for this summary file.

Subjects	Table numbers
Age	
<i>Families</i>	
by Average Family Size	PCT31
<i>Households</i>	
by Average Household Size	PCT7
<i>Institutionalized Population</i>	
by Group Quarters Population in Institutional Facilities by Sex	PCO2
<i>Noninstitutionalized Population</i>

Chapter 4.

Summary Level Sequence Chart

Summary levels specify the content and hierarchical relationships of the geographic elements that are required to tabulate and summarize data. In the Summary Level Sequence Chart that follows, the summary level code precedes the summary level area, and symbols are used with special meaning for summary levels:

Hyphen “-” separates the elements of a hierarchy.

Slash “/” denotes equivalent elements that have different names.

Parentheses “()” are not used in the specification for summary levels, but are used occasionally in the usual and customary manner in statements of clarification.

¹ State, District of Columbia, or Puerto Rico.

² Parish in Louisiana; borough, census area, city and borough, or municipality in Alaska; and municipio in Puerto Rico. In Maryland, Missouri, Nevada, and Virginia, one or more cities are independent of counties and are treated as statistical equivalents of counties. The entire District of Columbia, which has no counties, is treated as a county equivalent.

³ Subbarrio in Puerto Rico only.

⁴ American Indian Area/Alaska Native Area (Reservation or Statistical Entity Only) includes American Indian Reservations; Oklahoma Tribal Statistical Areas (OTSAs); Tribal Designated Statistical Areas (TDSAs) (federal areas); State Designated Tribal Statistical Areas (SDTSAs) (state areas); and Alaska Native Village Statistical Areas (ANVSAs) (Alaska).

⁵ Tribal Subdivisions exist only within those federally recognized American Indian reservations and/or off-reservation trust lands and Oklahoma tribal statistical areas (OTSAs) where tribal officials provided boundaries to the Census Bureau.

⁶ 111th Congress.

IDENTIFICATION SECTION

Field name	Data dictionary reference name	Field size	Starting position	Data type
------------	--------------------------------	------------	-------------------	-----------

NOTE: The filling of codes and data attributes in the files is specific to summary level; not all fields are filled for every summary level. Where a code or attribute is specified, the actual value is assigned to the field except for the use of three special codes:

Assignment of codes of nine (9) indicates a balance record or that the entity or attribute does not exist for this record.

Assignment of pound signs (#) indicates that more than one value exists for this field and, thus, no specific value can be assigned.

Assignment of exclamation marks (!) indicates that the data are not yet available for this product.

Geographic Area Codes—Con.

FIPS County Class Code ⁸	COUNTYCC	2	33	A/N
-------------------------------------	----------	---	----	-----

- | | |
|----|--|
| C7 | An incorporated place that is independent of any county |
| H1 | An active county or equivalent area |
| H4 | An inactive county or equivalent area |
| H5 | A statistical county equivalent area |
| H6 | A county or equivalent feature that has consolidated its government with an incorporated place |

County Size Code ⁹	COUNTYSC	2	35	A/N
-------------------------------	----------	---	----	-----

County Subdivision (FIPS) ^{7, 8}	COUSUB	5	37	A/N
---	--------	---	----	-----

- | | |
|-------------|--|
| 00000 | Water area not assigned to a county subdivision |
| 00001–89999 | County subdivision in a state-level entity with governmental entities and in Alaska and Puerto Rico |
| 90000–98999 | County subdivision in a state with administrative or statistical entities (excluding Alaska and Puerto Rico) |

FIPS County Subdivision Class Code ⁸	COUSUBCC	2	42	A/N
---	----------	---	----	-----

- | | |
|----|---|
| C2 | An active incorporated place that is legally coextensive with a county subdivision but treated as independent of any county subdivision (an independent place) |
| C5 | An active incorporated place that is independent of any county subdivision and serves as a county subdivision equivalent (an independent place) |
| C7 | An incorporated place that is independent of any county (an independent city) |
| T1 | An active county subdivision that is not coextensive with an incorporated place |
| T2 | An active county subdivision that is coextensive with a census designated place |
| T5 | An active county subdivision that is coextensive with an incorporated place |
| T9 | An inactive county subdivision |
| Z1 | A nonfunctioning county subdivision |
| Z2 | A county subdivision that is coextensive with or wholly contained within a legal American Indian, Alaska Native, or Native Hawaiian area and is independent of any other county subdivision |
| Z3 | A county subdivision defined as a statistical unorganized territory |
| Z5 | A statistical census county division (CCD) or census subarea (Alaska only) |
| Z7 | An active incorporated place that is legally coextensive with or independent of any county subdivision in a state with only nonfunctioning county subdivisions (an independent place) |
| Z9 | Water area not assigned to a county subdivision |

Area Characteristics—Con.**Legal/Statistical Area Description Code—Con.**

- 00 None—no legal/statistical area description exists; no text is appended to the name of the entity
- 03 City and borough—legal county equivalent in Alaska (Juneau, Sitka, Wrangell, and Yakutat); “City and Borough” is appended to the name of the entity
- 04 Borough—county equivalent in Alaska; “Borough” is appended to the name of the entity
- 05 Census area—statistical county equivalent in Alaska; “Census Area” is appended to the name of the entity
- 06 County—legal division of 48 states; “County” is appended to the name of the entity
- 07 District—1) legal tribal subdivision in Arizona, Minnesota, Montana, Nebraska, North Dakota, and South Dakota; 2) state legislative district (upper chamber) in Massachusetts; and 3) state legislative district (lower chamber) in Massachusetts; “District” is appended to the name of the entity
- 12 Municipality—legal county equivalent in Alaska (Anchorage and Skagway); “Municipality” is appended to the name of the entity
- 13 Municipio—legal county equivalent in Puerto Rico; “Municipio” is appended to the name of the entity
- 15 Parish—legal county equivalent in Louisiana; “Parish” is appended to the name of the entity
- 20 Barrio—minor civil division (MCD) in Puerto Rico; “barrio” is appended to the name of the entity
- 21 Borough—1) minor civil division (MCD) in New York; 2) MCD equivalent (independent place) in New Jersey and Pennsylvania; 3) incorporated place in Connecticut, New Jersey, and Pennsylvania; “borough” is appended to the name of the entity
- 22 Census county division (CCD)—statistical county subdivision in 20 states; “CCD” is appended to the name of the entity
- 23 Census subarea—statistical county subdivision in Alaska; “census subarea” is appended to the name of the entity
- 25 City—1) legal county equivalent in Maryland, Missouri, and Virginia (independent city); 2) minor civil division (MCD) equivalent in 23 states and the District of Columbia (independent place); 3) incorporated place in 49 states and the District of Columbia; 4) consolidated city in Connecticut (Milford) and Indiana (Indianapolis); “city” is appended to the name of the entity
- 27 District (election, magisterial)—minor civil division (MCD) in Virginia and West Virginia; “district” is appended to the name of the entity
- 28 District (commissioner, election, magisterial, supervisors’, or parish governing authority)—1) minor civil division (MCD) in Louisiana, Maryland, Mississippi, Nebraska, Tennessee, Virginia, and West Virginia; 2) tribal subdivision in Arizona and South Dakota; “District” is added before the name of the entity
- 29 Election precinct—minor civil division (MCD) in Illinois and Nebraska; “precinct” is appended to the name of the entity
- 30 Election precinct—minor civil division (MCD) in Illinois and Nebraska; “Precinct” is added before the name of the entity
- 31 Gore—minor civil division (MCD) in Maine and Vermont; “gore” is appended to the name of the entity
- 32 Grant—minor civil division (MCD) in New Hampshire and Vermont; “grant” is appended to the name of the entity
- 36 Location—minor civil division (MCD) in New Hampshire; “location” is appended to the name of the entity
- 37 Municipality—1) minor civil division (MCD) equivalent in Pennsylvania (independent place); 2) incorporated place in Alaska (Anchorage) and Pennsylvania; “municipality” is appended to the name of the entity
- 39 Plantation—minor civil division (MCD) in Maine; “plantation” is appended to the name of the entity
- 41 Barrio-pueblo—minor civil division (MCD) in Puerto Rico; “barrio-pueblo” is appended to the name of the entity

Area Characteristics—Con.**Legal/Statistical Area Description Code—Con.**

- 42 Purchase—minor civil division (MCD) in New Hampshire; “purchase” is appended to the name of the entity
- 43 Town—1) minor civil division (MCD) in eight states; 2) MCD equivalent in New Jersey, Pennsylvania, and South Dakota (independent place); 3) incorporated place in 30 states; “town” is appended to the name of the entity
- 44 Township—minor civil division (MCD) in 16 states; “township” is appended to the name of the entity
- 45 Township—minor civil division (MCD) in Arkansas, Kansas, Minnesota, Nebraska, and North Carolina; “Township” is added before the name of the entity
- 46 Unorganized territory—minor civil division (MCD) in nine states; “UT” is appended to the name of the entity
- 47 Village—1) minor civil division (MCD) equivalent in New Jersey, Ohio, South Dakota, and Wisconsin (independent place); 2) incorporated place in 19 states; “village” is appended to the name of the entity
- 49 Charter township—minor civil division (MCD) in Michigan; “charter township” is appended to the name of the entity
- 51 Subbarrio—subminor civil division (sub-MCD) in Puerto Rico; “subbarrio” is appended to the name of the entity
- 53 City and borough—incorporated place in Alaska (Juneau, Sitka, and Wrangell); “city and borough” is appended to the name of the entity
- 55 Comunidad—statistical place (census designated place) in Puerto Rico; “comunidad” is appended to the name of the entity
- 57 Census designated place—statistical place in all 50 states; “CDP” is appended to the name of the entity
- 62 Zona urbana—statistical place (census designated place) in Puerto Rico; “zona urbana” is appended to the name of the entity
- 68 Census region—statistical division of the United States; “Region” is appended to the name of the entity
- 69 Census division—statistical division of the United States; “Division” is appended to the name of the entity
- 70 Urban growth area (UGA)—legal area in Oregon and Washington; “UGA” is appended to the name of the entity
- 75 Urbanized area (UA)—statistical urban area in all 50 states, the District of Columbia, and Puerto Rico; “Urbanized Area” is appended to the name of the entity
- 76 Urban cluster (UC)—statistical urban area in all 50 states and Puerto Rico; “Urban Cluster” is appended to the name of the entity
- 77 Alaska Native Regional Corporation—legal Alaska Native area in Alaska; “Alaska Native Regional Corporation” is appended to the name of the entity
- 78 Hawaiian home land—legal Native Hawaiian area in Hawaii; “Hawaiian Home Land” is appended to the name of the entity
- 79 Alaska Native village statistical area—statistical Alaska Native area in Alaska; “ANVSA” is appended to the name of the entity
- 80 Tribal designated statistical area—statistical American Indian reservation equivalent in California, New York, and Washington for federally recognized tribes without a legal land base outside of Oklahoma; “TDSA” is appended to the name of the entity
- 81 Colony—American Indian reservation in Nevada; “Colony” is appended to the name of the entity
- 82 Community—1) American Indian reservation in California, Minnesota, Nevada, Oregon, and Wisconsin; “Community” is appended to the name of the entity; 2) American Indian tribal subdivision in North Carolina and Oklahoma
- 83 Joint-use area—American Indian reservation equivalent in Kansas and New Mexico; “joint-use area” is appended to the name of the entity

Area Characteristics—Con.**Legal/Statistical Area Description Code—Con.**

- 84 Pueblo—American Indian reservation in New Mexico and Texas; “Pueblo” is appended to the name of the entity
- 85 Rancheria—American Indian reservation in California; “Rancheria” is appended to the name of the entity
- 86 Reservation—1) American Indian reservation in 34 states; 2) minor civil division (MCD) equivalent in Maine and New York; “Reservation” is appended to the name of the entity
- 87 Reserve—American Indian reservation in Alaska; “Reserve” is appended to the name of the entity
- 88 Oklahoma tribal statistical area—statistical American Indian reservation equivalent in Oklahoma; “OTSA” is appended to the name of the entity
- 89 Trust land—legal American Indian reservation equivalent in nine states; “Trust Land” is appended to the name of the entity
- 90 Joint-use Oklahoma tribal statistical area—statistical American Indian reservation equivalent in Oklahoma; “joint-use OTSA” is appended to the name of the entity
- 91 Ranch—American Indian reservation in Nevada; “Ranch” is appended to the name of the entity
- 92 State designated tribal statistical area—statistical American Indian reservation equivalent in Alabama, Delaware, Louisiana, New Jersey, North Carolina, South Carolina, and Virginia; “SDTSA” is appended to the name of the entity
- 93 Indian village—American Indian reservation in California; “Indian Village” is appended to the name of the entity
- 94 Village—American Indian reservation in California and Oregon; “Village” is appended to the name of the entity
- 95 Indian community—American Indian reservation in Michigan and Minnesota; “Indian Community” is appended to the name of the entity
- 96 Indian reservation—American Indian reservation in Arizona, California, Montana, Nevada, Oregon, South Dakota, and Washington; “Indian Reservation” is appended to the name of the entity
- 97 Indian rancheria—American Indian reservation in California; “Indian Rancheria” is appended to the name of the entity
- 98 Indian colony—American Indian reservation in Nevada and Oregon; “Indian Colony” is appended to the name of the entity
- 99 Pueblo de—American Indian reservation in New Mexico; “Pueblo de” is added before the name of the entity
- 9C Pueblo of—American Indian reservation in New Mexico; “Pueblo of” is added before the name of the entity
- 9D Settlement—American Indian reservation in Iowa; “Settlement” is appended to the name of the entity
- BG Block group—statistical area in the United States and Puerto Rico; “Block Group” is added before the name (code) of the entity
- BK Block—statistical area in the United States and Puerto Rico; “Block” is added before the name (code) of the entity
- C1 Congressional district (at large)—congressional district in a single-district state (Alaska, Delaware, Montana, North Dakota, South Dakota, Vermont, and Wyoming); “Congressional District (at Large)” appears as the name of the entity
- C2 Congressional district—congressional district in a state with more than one district (43 states); “Congressional District” is added before the name (code) of the entity
- C3 Resident commissioner district (at large)—congressional district equivalent in Puerto Rico; “Resident Commissioner District (at Large)” appears as the name of the entity
- C4 Delegate district (at large)—congressional district equivalent in the District of Columbia; “Delegate District (at Large)” appears as the name of the entity

Area Characteristics—Con.**Legal/Statistical Area Description Code—Con.**

- CG Consolidated government—consolidated city in Georgia (Augusta-Richmond County); “consolidated government” is appended to the name of the entity
- CN Corporation—incorporated place in West Virginia (Ranson); “corporation” is appended to the name of the entity
- CT Census tract—statistical area in the United States and Puerto Rico; “Census Tract” is added before the name (modified code) of the entity
- IB Tribal block group—statistical area within specified legal American Indian areas; “Tribal Block Group” is added before the name (code) of the entity
- IT Tribal census tract—statistical area within specified legal American Indian areas; “Tribal Census Tract” is added before the name (modified code) of the entity
- L1 Ward—state legislative district (upper chamber) equivalent in the District of Columbia; “Ward” is added before the name of the entity
- L2 Senatorial district—state legislative district (upper chamber) in Nevada; “Senatorial District” is appended to the name of the entity
- L3 Assembly district—state legislative district (lower chamber) in California, Nevada, New York, and Wisconsin; “Assembly District” is added before the name of the entity
- L4 General assembly district—state legislative district (lower chamber) in New Jersey; “General Assembly District” is added before the name of the entity
- L5 State legislative district—state legislative district (lower chamber) in Maryland; “State Legislative District” is added before the name of the entity
- L6 State legislative subdistrict—state legislative district (lower chamber) in Maryland; “State Legislative Subdistrict” is added before the name of the entity
- L8 State senate district—state legislative district (upper chamber) in Vermont; “State Senate District” is appended to the name of the entity
- L9 State house district—state legislative district (lower chamber) in Vermont; “State House District” is appended to the name of the entity
- LL State house district—state legislative district (lower chamber) in 41 states and Puerto Rico; “State House District” is added before the name of the entity
- LU State senate district—state legislative district (upper chamber) in 47 states and Puerto Rico; “State Senate District” is added before the name of the entity
- M0 Combined statistical area—statistical area in 45 states, the District of Columbia, and Puerto Rico; “CSA” is appended to the name of the entity
- M1 Metropolitan statistical area—statistical area in all 50 states, the District of Columbia, and Puerto Rico; “Metro Area” is appended to the name of the entity
- M2 Micropolitan statistical area—statistical area in 47 states and Puerto Rico; “Micro Area” is appended to the name of the entity
- M3 Metropolitan division—statistical area in 17 states and the District of Columbia; “Metro Division” is appended to the name of the entity
- M4 Combined New England city and town area—statistical area in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; “Combined NECTA” is appended to the name of the entity
- M5 Metropolitan New England city and town area—statistical area in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; “Metropolitan NECTA” is appended to the name of the entity
- M6 Micropolitan New England city and town area—statistical area in Connecticut, Maine, Massachusetts, New Hampshire, and Vermont; “Micropolitan NECTA” is appended to the name of the entity
- M7 New England city and town area division—statistical area in Massachusetts and New Hampshire; “NECTA Division” is appended to the name of the entity

Area Characteristics—Con.**Legal/Statistical Area Description Code—Con.**

MG	Metropolitan government—1) incorporated place in Tennessee (Lynchburg, Moore County); 2) consolidated city in Tennessee (Nashville-Davidson); “metropolitan government” is appended to the name of the entity
MT	Metro government—consolidated city in Kentucky (Louisville/Jefferson County); “metro government” is appended to the name of the entity
OT	Off-reservation trust land—trust land component of an American Indian reservation with associated trust land in 23 states; “Off-Reservation Trust Land” is appended to the name of the entity
P5	Public use microdata area (PUMA)—statistical area in all 50 states, the District of Columbia, and Puerto Rico; “PUMA” is added before the name (code) of the entity
T1	Area—American Indian tribal subdivision in Arizona and Utah; “Area” is appended to the name of the entity
T2	Chapter—American Indian tribal subdivision in Arizona, New Mexico, and Utah; “Chapter” is appended to the name of the entity
T3	Segment—American Indian tribal subdivision in Minnesota, North Dakota, and South Dakota; “Segment” is appended to the name of the entity
TA	Administrative area—American Indian tribal subdivision in Arizona; “Administrative Area” is appended to the name of the entity
TB	Addition—American Indian tribal subdivision in Wisconsin; “Addition” is appended to the name of the entity
TC	County district—statistical American Indian tribal subdivision in Oklahoma; “County District” is added before the name of the entity
UC	Urban county—incorporated place in Kentucky (Lexington-Fayette); “urban county” is appended to the name of the entity
UG	Unified government—1) incorporated place in Georgia (Cusseta-Chattahoochee County, Georgetown-Quitman County, and Webster County); 2) consolidated city in Georgia (Athens-Clarke County); “unified government” is appended to the name of the entity
V1	Voting district (VTD)—legal voting district in 32 states and Puerto Rico; “VTD” is added before the name of the entity
V2	Voting district (VTD)—legal voting district in 32 states; “VTD” is appended to the name of the entity
Z5	ZIP code tabulation area (5-digit)—statistical area in all 50 states, the District of Columbia, and Puerto Rico; “ZCTA5” is added before the name of the entity

ENDNOTES

1. A unique, six-character identifier for each file series. See [“How to Use This Product”](#) for further information.
2. Identifies the geographic level for which the data matrices on the summary file have been summarized. The summary level sequence chart describes the hierarchical arrangement of the specified geographic areas with other geographic areas, if any. The summary level must be used in combination with the geographic area codes to identify a specific geographic area (for example, summary level 050 and a specific state and county code must be used together to locate the data for a particular county). See [“How to Use This Product”](#) for further information.
3. Indicates an iteration (repetition), for the specified summary level, of the data matrices on the summary file for the geographic components listed in the Geographic Component field. The Redistricting Data Summary File products contain no components. See [“How to Use This Product”](#) for further information.

Geographic Component Description

00	Not a geographic component
01	Urban
04	Urban—in urbanized area
05	Urban—in urbanized area of 5,000,000 or more population
06	Urban—in urbanized area of 2,500,000 to 4,999,999 population
07	Urban—in urbanized area of 1,000,000 to 2,499,999 population
08	Urban—in urbanized area of 500,000 to 999,999 population
09	Urban—in urbanized area of 250,000 to 499,999 population
10	Urban—in urbanized area of 100,000 to 249,999 population
11	Urban—in urbanized area of 50,000 to 99,999 population
28	Urban—in urban cluster
29	Urban—in urban cluster of 25,000 to 49,999 population
30	Urban—in urban cluster of 10,000 to 24,999 population
31	Urban—in urban cluster of 5,000 to 9,999 population
32	Urban—in urban cluster of 2,500 to 4,999 population
43	Rural
44	Rural—place

- Indicates an iteration (repetition), for the specified summary level, of the data matrices on the summary file for a population or housing characteristic. These iteration fields apply to Summary File 2 (SF 2) and the American Indian and Alaska Native Summary File only. See [Appendix H](#) for the list of possible iterations.
- The sequence number of the table file within the set of physical files for the state (i.e., the geographic header record file and one or more table files). See [“How to Use This Product”](#) for more information.
- The logical record is the complete record for a geographic entity defined by the summary level, but exclusive of the characteristic iteration. A logical record may have one or more parts (or segments). Each logical record has an assigned sequential integer number within the file. See [“How to Use This Product”](#) for further information.
- See [Appendix A, “Geographic Terms and Concepts,”](#) for definition of this field.
- The Federal Information Processing Standards (FIPS) codes were withdrawn as a standard in 2005. The U.S. Census Bureau, however, has renamed these codes as Federal Information Processing Series codes and retained the acronym. The two-digit state and congressional district and three-digit county FIPS codes (former FIPS 5, 9, and 6, respectively) are unchanged, but with oversight transferred to the American National Standards Institute (ANSI). The five-digit FIPS 55 codes are no longer a federal code standard; however they are retained in Census Bureau files as administrative codes and used as primary key codes for many geographic entity types. The U.S. Geological Survey has received ANSI oversight for a code standard that uses the Geographic Names Information System identifier (GNIS ID). The new ANSI standard using the GNIS ID as the official codes for Named Physical and Cultural Geographic Features of the United States and Puerto Rico also is included in Census Bureau files for state, county, county subdivision, place, consolidated city, American Indian area, Alaska Native area, Hawaiian home land, American Indian tribal subdivision, and subminor civil division or equivalent features. The Census Bureau references these fields in the geoheader as ANSI codes and using the term National Standard code. The codes represent the official numeric GNIS ID as an eight-digit character field with leading zeroes. The Census Bureau treats the state and county or equivalent area ANSI codes as supplemental standard codes.

The following lists the published code standards used for the 2010 Census (with its associated Census 2000 standard):

- INCITS.38-200x (R2004), Codes for the Identification of the States, the District of Columbia, Puerto Rico, and the Insular Areas of the United States (Formerly FIPS 5-2)

ENDNOTES—Con.

- INCITS.31-200x (R2007), Codes for the Identification of Counties and Equivalent Areas of the United States, Puerto Rico, and the Insular Areas of the United States (Formerly FIPS 6-4)
- INCITS.454-200x, Codes for the Identification of Metropolitan and Micropolitan Statistical Areas and Related Areas of the United States and Puerto Rico (Formerly FIPS 8-6)
- INCITS 455-200x, Codes for the Identification of Congressional Districts and Equivalent Areas of the United States, Puerto Rico, and the Insular Areas (Formerly FIPS 9-1)
- INCITS 446-2008, (GNIS) Identifying Attributes for Named Physical and Cultural Geographic Features (Except Roads and Highways) of the United States, Its Territories, Outlying Areas, and Freely Associated Areas, and the Waters of the Same to the Limit of the Twelve-Mile Statutory Zone (Formerly FIPS 55-4)

Note: INCITS refers to InterNational Committee for Information Technology Standards.

9. Identifies areas within predetermined population ranges. The actual codes and ranges are common to all entities with a size code field. The complete list of size codes follows:

00	Not in universe
01	0
02	1–24
03	25–99
04	100–199
05	200–249
06	250–299
07	300–499
08	500–999
09	1,000–1,499
10	1,500–1,999
11	2,000–2,499
12	2,500–4,999
13	5,000–9,999
14	10,000–19,999
15	20,000–24,999
16	25,000–49,999
17	50,000–99,999
18	100,000–249,999
19	250,000–499,999
20	500,000–999,999
21	1,000,000–2,499,999
22	2,500,000–4,999,999
23	5,000,000 or more

The size code fields are not filled for the Redistricting Data Summary File products.

10. Codes in unspecified arrangement for Census Bureau use.
11. Federal Information Processing Series (FIPS) 55 codes are assigned by state. Because American Indian areas and tribal subdivisions can exist in more than one state, multiple FIPS 55 codes can exist for the entity.
12. Urban Areas, Urban/Rural classification, ZIP Code Tabulation Areas, and Public Use Microdata Areas are not available in the Redistricting Data products.
13. Blank values in the Congressional District (111th) field indicate areas where no congressional district was assigned by state redistricting officials.
14. State legislative district codes have three characters and can include a hyphen (-). The code ZZZ indicates state legislative districts not defined. In the District of Columbia and Nebraska, both of which have a single legislative body, the state legislative districts are reported as upper chamber districts, and the lower chamber districts are coded as 999.

ENDNOTES—Con.

15. Voting district codes can have one to six characters including special characters of a hyphen (-), dot (.), and forward slash (/). If the code contains less than six characters, the field is right-justified with leading blanks. The code ZZZZZZ indicates voting district not defined in a county or equivalent area containing one or more defined voting districts. A code of six blanks is used in Kentucky, Rhode Island, Oregon (except Multnomah County), and 14 of the 50 counties in Montana, where participants did not define voting districts for entire states or counties.
16. Land area measurement in square meters. The accuracy of the area measurement is limited by the inaccuracy inherent in the mapping of the various boundary features in the Census Bureau's geographic database. Land area includes areas classified as intermittent water, swamps, and glaciers, which appear on census maps and in the Census Bureau's geographic database as hydrographic features. Square miles can be derived by dividing square meters by 2,589,988. See [Appendix A, "Geographic Terms and Concepts,"](#) for definition of this field.
17. Water area measurement in square meters. The accuracy of the area measurement is limited by the inaccuracy inherent in the mapping of the various boundary features in the Census Bureau's geographic database. Water area excludes areas classified as intermittent water, swamps, and glaciers, which are treated as land even though they appear on census maps and in the Census Bureau's geographic database as hydrographic features. Square miles can be derived by dividing square meters by 2,589,988. See [Appendix A, "Geographic Terms and Concepts,"](#) for definition of this field.
18. Name of the lowest-level entity represented by the summary level. In addition to the name of the entity, the name field contains the legal/statistical area description (LSAD), when appropriate, and sometimes contains the state abbreviation. For legal entities, the name is the one reported to the Census Bureau in the Boundary and Annexation Survey or by other appropriate sources, such as state education officials for school districts. For statistical entities, the name is determined by the Office of Management and Budget for metropolitan and micropolitan areas. The remaining statistical area names usually are supplied by tribal, state, or local sources according to published criteria. For redistricting data entities, names are reported by the state redistricting data liaison. For other areas, the name is determined by the local officials, usually in cooperation with the Census Bureau. When the summary level data represent only part of the area specified in the name, the name usually will have "(part)" appended to the name/code terminology to designate that this entry for the entity represents only a part of the total entity.
19. The total number of persons enumerated in the specified geographic entity as determined in the 100 percent processing.
20. The total number of housing units enumerated in the specified geographic entity as determined in the 100 percent processing.
21. Latitude in degrees, to seven decimal places, of a point within the geographic area represented by the summary level. The character immediately preceding the first digit of the latitude of an internal point identifies the direction (hemisphere): a plus sign (+) indicates the Northern Hemisphere; a minus sign (-) indicates the Southern Hemisphere. See [Appendix A, "Geographic Terms and Concepts,"](#) for definition of this field.
22. Longitude in degrees, to seven decimal places, of a point within the geographic area represented by the summary level. The character immediately preceding the first digit of the longitude of an internal point identifies the direction (hemisphere): a plus sign (+) indicates the Eastern hemisphere; a minus sign (-) indicates the Western Hemisphere. A point on the 180th meridian is assigned to the Western Hemisphere (-180.0000000). See [Appendix A, "Geographic Terms and Concepts,"](#) for definition of this field.
23. Congressional District (113th), Congressional District (114th), and Congressional District (115th) are reserved for areas established after reapportionment and redistricting.
24. State Legislative District—Upper and Lower Chamber—for Year 2, 3, and 4 are reserved for areas established after redistricting.

TABLE (MATRIX) SECTION

The 2010 Census Summary File 2 is provided as a set, including 1 geographic header file and 11 data files. The data files are presented in the table (matrix) section in segments. The data files are ASCII format with variable length fields delimited by commas. The data fields are numeric with the maximum size shown in MAX SIZE. Each data file begins with a subset of fields from the geographic header file. They are: file identification (FILEID), state/U.S. abbreviation (STUSAB), characteristics iteration (CHARITER), two-character file sequence number (CIFSN), and a logical record number (LOGRECNO). See also Chapter 2, How to Use This Product.

Table number	Table contents	Data dictionary reference name	Segment	Max size
--------------	----------------	--------------------------------	---------	----------

POPULATION SUBJECTS SUMMARIZED TO THE CENSUS TRACT LEVEL

File 01—File Linking Fields (comma delimited). These fields link File 01 with the geographic header.

Field name	Data dictionary reference name	Max size	Data type
File Identification	FILEID	6	A/N
State/U.S. Abbreviation (USPS)	STUSAB	2	A
Characteristic Iteration	CHARITER	3	A/N
Characteristic Iteration File Sequence Number	CIFSN	2	A/N
Logical Record Number	LOGRECNO	7	N

POPULATION SUBJECTS SUMMARIZED TO THE CENSUS TRACT LEVEL—Con.

PCT23. HOUSEHOLD TYPE FOR THE POPULATION IN HOUSEHOLDS [13]—Con.

Note 1: When a category other than Total Population is selected, the data in this table refer to the race, Hispanic or Latino origin, or tribe/tribal grouping of the person.

Note 2: A household that has at least one member of the household related to the householder by birth, marriage, or adoption is a "Family household." All persons living in family households are included in this total regardless of their relationship to the householder. Same-sex couple households are included in the family households category if there is at least one additional person related to the householder by birth or adoption. Same-sex couple households with no relatives of the householder present are tabulated in nonfamily households. "Nonfamily households" consist of people living alone and households which do not have any members related to the householder. Responses of "same-sex spouse" were edited during processing to "unmarried partner." Nonrelatives include any household member not related to the householder by birth, marriage, or adoption. This includes unmarried partners.

PCT24. HOUSEHOLD TYPE BY RELATIONSHIP FOR THE POPULATION UNDER 18 YEARS [16]

Universe: Population under 18 years

Total:	PCT0240001	5	9
In households:	PCT0240002	5	9
Householder or spouse	PCT0240003	5	9
Related child:	PCT0240004	5	9
Own child:	PCT0240005	5	9
In husband-wife family	PCT0240006	5	9
In other family:	PCT0240007	5	9

Note 1: When a category other than Total Population is selected, the data in this table refer to the race, Hispanic or Latino origin, or tribe/tribal grouping of the householder.

Note 2: A household that has at least one member of the household related to the householder by birth, marriage, or adoption is a "Family household." Same-sex couple households are included in the family households category if there is at least one additional person related to the householder by birth or adoption. Same-sex couple households with no relatives of the householder present are tabulated in nonfamily households. Responses of "same-sex spouse" were edited during processing to "unmarried partner." "Nonfamily households" consist of people living alone and households which do not have any members related to the householder.

MASTER ADDRESS FILE DEVELOPMENT

As in Census 2000, the base for the address list for the 2010 Census was the address list from the previous census. Various updates were made to the address list during the intervening decade. The primary source of new addresses after Census 2000 was the Delivery Sequence File (DSF) from the U.S. Postal Service (USPS). The U.S. Census Bureau acquired this file of all mailing addresses in the United States and updated the Master Address File (MAF) twice a year (March and October) until February 2010. Addresses must be associated with a block to be included in the census. The process of associating these addresses with a block is called geocoding. For the Census Bureau, the file where geographic information is contained is the Topologically Integrated Geographic Encoding and Referencing System (TIGER®). During this decade, the MAF and TIGER® have been integrated into the MAF/TIGER® database (MTdb).

For the processing of the DSF records, city-style addresses (containing a house number and street name) of residential units were applied to the MAF in those blocks that, in general terms, had been found to have a majority of city-style addresses in order that duplication would not result from the addition of these addresses. Another file from the USPS, the Locatable Address Conversion System (LACS), contained linkages for addresses that had been changed. Use of this file by the Census Bureau allowed for old and new addresses to be linked in the MTdb. This was especially desirable for linking the non-city-style addresses that had been converted to city-style addresses.

Various field operations, such as census tests and the update of rural area addresses for the American Community Survey, led to localized updates or updates in specific types of areas. In particular, updating addresses with post office box type addresses in the rural area was meant to balance the updating of the MTdb with city-style addresses from the DSF.

Local Update of Census Addresses

The first large-scale update of addresses for the decennial census was the Local Update of Census Addresses (LUCA) program. In this program, governmental units (GUs) were allowed to participate in updating the address list in three different ways. One option allowed for review of the Census Bureau's address list, while the other options allowed only for the GUs to submit a list of addresses to the Census Bureau. Under any of these options, new addresses submitted by the GUs were included on the subsequent address list. These addresses could be for housing units (HUs) or for group quarters (GQs). The submitted addresses were then included in the universe for validation in the next major address list development operation, Address Canvassing, which occurred between April and July 2009.

Address Canvassing

Address Canvassing was conducted in all areas of the United States and Puerto Rico except in the areas that were designated for Remote Alaska or Remote Update Enumerate in the census. Address Canvassing was a dependent check of the list of addresses, as well as of the maps. The Address Canvassing operation was performed using automation, which allowed for the integration of address and map updates, as well as the imposition of rules on what constitutes a minimum allowable address and the collection of particular geographic fields. The allowable actions on the addresses in Address Canvassing were validate, nonresidential, delete, duplicate, address correction, and an action for designating possible GQs. Adds to the list were also allowed. All deletes and duplicates were validated during the next phase of the operation, called delete verification. The results from Address Canvassing were incorporated into the MTdb. One of the first uses of these results was for creating feedback to the GUs participating in LUCA. The results from processing the Address Canvassing updates were also used for the creation of the initial census address list starting in July 2009, the initial Universe Control and Management (UC&M) file. Printing of the questionnaires used this address list.

Group Quarters

The results of Address Canvassing also contributed to the universe for the next operation, which was Group Quarters Validation (QGV). The procedures for creating the address list of GQs were significantly different for the 2010 Census as opposed to previous censuses. In order to reduce duplication and geographic data errors, the address lists of HUs and GQs were integrated in the MTdb. The list of potential GQs going into QGV was the accumulation of GQ addresses from Census 2000, GQ addresses acquired from various sources, and addresses listed as Other Living Quarters (potential GQs) in Address Canvassing. Cases designated as GQs through other sources were intended to be sent to QGV regardless of the Address Canvassing status. However, it was discovered during processing of the LUCA updates that GUs often listed apartment buildings or commercial units as GQs. The schedule for completing QGV, in October 2009, was one of the riskiest in the census. For these units to remain on the list of units to be checked in QGV put timely completion of the operation at risk, and thus, the entire census schedule. Therefore, from the LUCA updates making their way to QGV, only the units with facility names that included special key names known to be associated with group quarters were designated for follow-up in QGV unless they were also designated as possible GQs in Address Canvassing. The addresses in QGV could receive an action of GQ—along with the type of GQ, HU, nonresidential, vacant, transient (meaning the location was connected to a geographic area that should be enumerated in the Enumeration at Transitory Locations operation), delete, or duplicate.

The results from QGV were processed in November 2009. Updates were made to the initial UC&M, resulting in the enumeration UC&M, or the full census universe. Units that were marked as housing units

in GQV were designated as adds to the initial UC&M universe. Other adds to this universe resulted from DSF updates that had occurred between the creation of the Address List for Address Canvassing and the creation of the enumeration UC&M. There were three DSFs contributing new adds to this UC&M file. A supplemental printing of addressed questionnaires resulted from this updated file. These questionnaires were either added to the mail stream at the point that questionnaires were delivered by the USPS or sent to the Local Census Offices in those areas where the added addresses occurred in Update/Leave areas.

Update/Leave

Update/Leave (U/L) is an operation in which questionnaires are hand-delivered due to potential problems with postal delivery of addresses. The presence of staff in the field for this delivery allows the simultaneous updating of the address lists and maps. Addresses on the address list in U/L areas received the actions of verify, correction, nonresidential, delete, or duplicate. Maps could also receive updates. The operation occurred between March 1 and April 2, 2010. There were approximately 12 million housing units in stateside U/L areas, and Puerto Rico (about 1.6 million addresses) was entirely U/L. There was no check on the deletes and duplicates designated in this operation because the operation was performed on paper and there was a timing issue with processing. The status of nonresponding units that were in the enumeration universe was checked in the later Nonresponse Follow-Up operation.

Nonresponse Follow-Up

Nonresponse Follow-Up (NRFU) is the operation in which nonresponding households from both mailout/mailback and U/L areas are followed up and enumerated, if possible. Other options within NRFU are to mark the unit vacant (either a regular vacant or seasonal), delete, or duplicate. It is also possible to add units and perform the enumeration on them. The maps also may be updated. The status of regular vacants and deletes is checked in the subsequent operation, the Vacant/Delete Check.

Other Address and Geocoding Operations

No additional updates were made to the enumeration universe in the UC&M before the start of NRFU. However, there were still operations and processes adding addresses to the MTdb, or in some cases, adding geographic data that allowed the addresses to be included in the census. These were: 1) LUCA Appeals; 2) New Construction; 3) HU Address Review; 4) Count Review; 5) Spring 2010 DSF; 6) newly geocoded addresses; 7) addresses resulting from a follow-up of INFO-COMMs (standardized forms used to document problems, issues, and unusual situations or to ask questions about procedures and other work-related matters by field staff) submitted during Address Canvassing; and 8) U/L added addresses.

LUCA Appeals was a process where a GU that participated in LUCA submitted challenges to the outputs from Address Canvassing. The challenged addresses were reviewed, and those that were approved were accepted back onto the census list.

New Construction was an effort similar to LUCA in which the participating GU submitted addresses that represented newly constructed and livable housing.

The HU Address Review was a headquarters review of addresses coming from a variety of sources. In general, these were people who reported situations, such as large apartment buildings missing from the census universe, where the report made it to headquarters personnel. Staff in the Geography Division researched these address submissions to determine if they were truly missing from the census address list and, if so, why. When it was found that addresses should be included on the census address list and did not duplicate other addresses already on the census address list, they were submitted for processing in the same format as files from the New Construction and Count Review programs.

Count Review was another effort undertaken with governmental representatives with an eye toward identifying housing that was missing from the list.

The Spring 2010 DSF contained mailable addresses as of February 2010. Residential addresses appearing on this list that were not already included in the MTdb were assumed to represent mostly newly constructed units. For the next source of addresses on this update, there were a few million addresses residing on the MTdb that had not yet been geocoded. It was assumed that these addresses would be added in Address Canvassing if they truly existed.

However, when Address Canvassing was completed and only about half of the addresses had been added in the operation, and at the same time there were some concerns about the coverage of the list, the Census Bureau undertook an independent effort in early 2010 to find geocodes for these units after first checking that the addresses were not represented on the list in another form.

The next addition of addresses resulted from Address Canvassing INFO-COMMs. The design of the automated instrument did not allow for units to be added during the Quality Control (QC) phase of the operation if the assignment had passed QC. Nevertheless, in some areas QC staff found large numbers of missing addresses that were not picked up within the QC sample. They filled out an INFO-COMM to apprise the local office staff of the situation. In early 2010, there was an effort to identify which of these cases were really missing units and where they should be added to the list. An input file that mimicked the inputs of the other operations adding addresses was created for these units to be added to the census list in this process, as well.

The final source of new addresses listed here was U/L adds. These are units that did not appear on the list used for U/L but that were identified as valid in the field. Questionnaires were delivered to these units, and updates were made to the MTdb based on the results of this operation. However, the processing of U/L actions could not be completed in time to update the NRFU universe without automation. Thus, in order to perform enumeration on U/L adds for households that did not return the form, the units needed to be included in the subsequent updated universe.

Vacant/Delete Check

These addresses just described made it into the enumeration universe for the first time for the Vacant/Delete Check (VDC). Not all of these addresses required a visit for enumeration during the VDC. In particular, if a householder at an address added during U/L mailed in the form in time, no additional visit was required. In addition, an operation dubbed the Late Add Mailing resulted in many of these addresses being mailed forms earlier than enumeration would have occurred. In particular, the LUCA Appeals addresses, the addresses from the most recent DSF that were geocoded to a block, and the addresses that were newly geocoded during the geocoding research were placed on a file for which questionnaires were printed and mailed. A unique processing ID was printed on each of these questionnaires, which enabled the questionnaires to be linked up to the census ID that was used when the units were added to the VDC universe. This also allowed for the information about receipt of a questionnaire to be passed back to the universe file and removed from the universe of follow-up cases. Therefore, the final list of units requiring follow-up and potential enumeration in VDC were the regular vacants and deletes as designated in NRFU and the new units added from the seven sources listed above for which no questionnaire was received by the time of universe creation. The universe of addresses printed within the address registers were all units that appeared in the enumeration universe plus the units added from the seven sources listed. One category of new address that did not appear on the VDC listing pages, due to timing, were the units that were added during NRFU.

Field Verification

There was one final check of particular addresses in the field. This operation is called Field Verification, and it was performed in the 2010 Census much as it was in Census 2000. Only specific addresses within the entire universe of addresses were acted on during this status check. Units designated for follow-up in this operation received a status of valid (or verify), delete, or duplicate. The addresses in the universe for this check in the 2010 Census included two categories of cases. The first was a check of new addresses that resulted from Be Counted forms or calls to the Telephone Questionnaire Assistance line that did not

have a related census ID. These addresses needed to be verified in the field before they were added to the census. They must be associated with a particular block before they could be sent for field work. The second category of cases was units that potentially needed to be removed from the universe based on the identification of duplicated persons in those units. Person duplication occurs for many reasons, one of which is duplication of housing units on the address list. Units linked by person matching that are within a close geographic area have been found in testing to be highly associated with housing-level problems. However, there are other situations that can lead to such person duplication that are not housing unit duplication, so these units identified as potential duplicates needed to be field checked before they could be safely removed from the census address list. For those units that were designated as duplicates, an indicator of which unit on the list that unit duplicated was collected.

Remote Areas

The descriptions above cover the vast majority of housing units in the United States and in all of Puerto Rico. However, there are some particularly remote or problematic areas that were designated for other types of enumeration. The first of these to start was Remote Alaska. In this operation, enumeration was scheduled to occur in fishing and hunting villages before the ice broke and the villagers scattered from their winter homes. Other areas in Alaska that were remote but where the population is stationary were designated for Remote Update/Enumerate. The methodology is the same for these two operations. The incoming address list was based on what was there during Census 2000. Updates were made to the address list and maps, and the households were enumerated at the same time. An area of Maine was also designated for Remote Update/Enumerate.

Some areas of the country (covering about 1.5 million addresses) were designated for Update/Enumerate. In these areas, Address Canvassing was completed, but it was felt that enumeration by Mailout/Mailback or U/L would have been problematic. These areas could be seasonal housing, federally designated tribal areas, or areas with particularly low predicted response rates based on various demographic factors. In Update/Enumerate, as in Remote Update/Enumerate and Remote Alaska, updates were made to the address list and maps at the same time that enumeration was completed. In general, this is the last operation that occurs in these areas, although it is possible for units in the Field Verification universe to be in these areas.

GROUP QUARTERS ENUMERATION

A list of nonstandard housing, such as college dormitories and group homes, was tracked in the MTdb in conjunction with the housing unit list. The list of these GQs was compiled from various sources, including the Census 2000 list of GQs, LUCA participants, the Federal-State Cooperative for Population Estimates, and Address Canvassing. The GQV of these addresses occurred in October 2009, as described above. The units that remained GQs after this check were included in Group Quarters Advance Visit (GQAV), and then Group Quarters Enumeration (GQE). In GQE, individual census questionnaires—meaning individual questionnaires for each person—were distributed at the GQs and collected by the field staff. A count of persons associated with a particular GQ resulted from this operation.

SERVICE-BASED ENUMERATION AND ENUMERATION AT TRANSITORY LOCATIONS

Service-Based Enumeration (SBE) was designed to account for the enumeration of persons without a usual residence that use service facilities (i.e., shelters, soup kitchens, and mobile food vans). In the 2010 Census, 3 days (March 29–31) were designated for these enumeration activities. Different types of facilities were designated for different days. Only persons using the service facility on the interview day were enumerated at that location. It was possible for people to be counted in more than one location due to use of different facilities on subsequent days. There is an unduplication of SBE persons for the purpose of minimizing this duplication.

People experiencing homelessness could also complete a Be Counted form and check the box indicating this status. To the extent that such persons could be associated with a state and county based on the information provided on the form, they will be counted at a Group Quarters within that state and county.

Certain areas were designated for Enumeration at Transitory Locations (ETL). These included RV parks and marinas where people were living as of Census Day if people living in these locations had no other permanent place to stay. The locations where ETL took place were designated in GQAV. When people were enumerated in ETL, the particular location was considered a housing unit.

CONFIDENTIALITY OF THE DATA

The Census Bureau has modified some data in this data release to protect confidentiality. Title 13 U.S. Code, Section 9, prohibits the Census Bureau from publishing results in which an individual's data can be identified.

The Census Bureau's internal Disclosure Review Board monitors the disclosure review process and sets the confidentiality rules for all data releases. A checklist approach is used to ensure that all potential risks are considered and addressed. A list of possible concerns is created and the Disclosure Review Board makes sure that the appropriate steps are taken to assure the confidentiality of the data.

Title 13 U.S. Code

Title 13 of the U.S. Code authorizes the Census Bureau to conduct surveys and censuses and mandates that any information obtained from private individuals and establishments remains confidential. Section 9 of Title 13 prohibits the Census Bureau from releasing "any publication whereby the data furnished by any particular establishment or individual under this title can be identified." Section 214 of Title 13, as modified by the Federal Sentencing Reform Act, imposes a fine of not more than \$250,000 and/or imprisonment of not more than 5 years for publication or communication in violation of Section 9.

Disclosure Avoidance

Disclosure avoidance is the process of disguising data to protect confidentiality. A disclosure of data occurs when someone can use published statistical information to identify an individual who provided information under a pledge of confidentiality. Using disclosure avoidance, the Census Bureau modifies or removes all of the characteristics that put confidential information at risk for disclosure. Although it may appear that a table shows information about a specific individual, the Census Bureau has taken steps (such as data swapping) to disguise the original data while making sure the results are useful.

Data Swapping

Data swapping is a method of disclosure avoidance designed to protect confidentiality in tables of frequency data (the number or percentage of the population with certain characteristics). Data swapping is done by editing the source data or exchanging records for a sample of cases. A sample of households is selected and matched on a set of selected key variables with households in neighboring geographic areas (geographic areas with a small population) that have similar characteristics (same number of adults, same number of children, etc.). Because the swap often occurs within a geographic area with a small population, there is no effect on the marginal totals for the geographic area with a small population or for totals that include data from multiple geographic areas with small populations. Because of data swapping, users should not assume that tables with cells having a value of one or two reveal information about specific individuals.

NONSAMPLING ERROR

In any large-scale statistical operation, such as the 2010 Census, human- and computer-related errors occur. These errors are commonly referred to as nonsampling errors. Such errors include not enumerating every household or every person in the population, not obtaining all required information from the respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. In

addition, errors can occur during the field review of the enumerators' work, during clerical handling of the census questionnaires, or during the electronic processing of the questionnaires.

While it is impossible to completely eliminate nonsampling error from an operation as large and complex as the decennial census, the Census Bureau attempts to control the sources of such error during the collection and processing operations. Described below are the primary sources of nonsampling error and the programs instituted to control this error in the 2010 Census. The success of these programs, however, was contingent upon how well the instructions actually were carried out during the census.

Types of Nonsampling Error

Nonresponse

Nonresponse to particular questions on the census questionnaire or the failure to obtain any information for a housing unit allows for the introduction of bias into the data because the characteristics of the nonrespondents have not been observed and may differ from those reported by respondents. As a result, any imputation procedure using respondent data may not completely reflect these differences either at the elemental level (individual person or housing unit) or on the average. Some protection against the introduction of large biases is afforded by minimizing nonresponse. Characteristics for the nonresponses were imputed by using reported data for a person or housing unit with similar characteristics.

Respondent and Enumerator Error

The person answering the mail questionnaire for a household or responding to the questions posed by an enumerator could serve as a source of error, although the question wording was extensively tested in several experimental studies prior to the census. The mail respondent may overlook or misunderstand a question or answer a question in a way that cannot be interpreted correctly by the data capture system. The enumerator may also misinterpret or otherwise incorrectly record information given by a respondent or may fail to collect some of the information for a person or household. To control problems such as these with the field enumeration, the work of enumerators was monitored carefully. Field staff were prepared for their tasks by using standardized training packages that included hands-on experience in using census materials. A sample of the households interviewed by each enumerator were reinterviewed to control for the possibility of fabricated data being submitted by enumerators.

Processing Error

The many phases involved in processing the census data represent potential sources for the introduction of nonsampling error. The processing of the census questionnaires completed by enumerators included field review by the crew leader, check-in, and transmittal of completed questionnaires. No field reviews were done on the mail return questionnaires for this census.

Error may also be introduced by the misinterpretation of data by the data capture system or the failure to capture all the information that the respondents or enumerators provided on the forms. Write-in entries go through coding operations, which may also be a source of processing error in the data. Many of the various field, coding, and computer operations undergo a number of quality control checks to help ensure their accurate application.

Reduction of Nonsampling Error

To reduce various types of nonsampling errors, a number of techniques were implemented during the planning, development of the mailing address list, data collection, and data processing activities. Quality assurance methods were used throughout the data collection and processing phases of the census to improve the quality of the data. A reinterview program was implemented to minimize the errors in the data collection phase for enumerator-filled questionnaires.

Several coverage improvement programs were implemented during the development of the census address list and census enumeration and processing to minimize undercoverage of the population and housing units. These programs were developed based on experience from previous decennial censuses and results from the 2010 Census testing cycle.

- Be Counted questionnaires, unaddressed forms requesting all questionnaire items plus a few additional items, were available in public locations for people who believed they were not otherwise counted.
- An introductory letter was sent to all mailout/mailback addresses and many addresses in update/leave areas prior to the mailing of the census form. A reminder postcard was also sent to these addresses.
- A replacement questionnaire was sent to nonresponding addresses in selected areas.
- Bilingual English/Spanish questionnaires were sent to all addresses in selected areas.
- Forms in Spanish, Chinese (simplified), Korean, Russian, and Vietnamese were mailed to those who requested them and Language Assistance Guides were available in 59 languages.
- A well-publicized toll-free phone number was available to answer questions about the forms, and responses could be taken over the phone.
- Under the LUCA program, local officials had the opportunity to address specific concerns about the accuracy and completeness of the address list.
- A Coverage Followup (CFU) telephone interview operation was implemented with the express purpose of improving within household coverage. Cases were telephoned when there was a discrepancy between the number in the count of persons box and the number of persons with data. A household-level undercoverage question was added to the questionnaire, and person-level overcoverage questions were also added. Certain categories of households checking these boxes were also selected for CFU for roster clarification. In addition, large households, or those with more than six household members, were selected for inclusion in CFU for the purpose of collecting full demographic data for persons beyond the first six.

Resolving Multiple Responses

With multiple ways for people to initiate or complete their enumeration, as well as the field follow-up operations, it was very likely that some households would be enumerated more than once. A special computer process was implemented to control the extent of this type of nonsampling error by resolving situations where more than one form was received from an address. The process consisted of several steps. Addresses that had more than one viable return were analyzed. Household data from one form were chosen as the household data to use in subsequent census processing. There are situations in which persons can then be added to the household roster if they are not already represented there. These are the cases in which a Be Counted form for a partial household was submitted for the same address, and when an enumeration operation discovers a person who should be counted at a different address (a Usual Home Elsewhere) from the address being enumerated.

DATA EDITING

The objective of the processing operation was to produce a set of data that describes the population as accurately and clearly as possible. As with Census 2000, information on 2010 Census questionnaires generally was not edited for consistency, completeness, and acceptability during field data collection nor during data capture operations. Enumerator-filled questionnaires were reviewed by census crew leaders and local office clerks for adherence to specified procedures. No clerical review of mail return questionnaires was done to ensure that the information on the form could be data captured, nor were households contacted to collect data that were missing from census returns as in previous censuses.

Most census questionnaires received by mail from respondents as well as those filled by enumerators were processed through a new contractor-built image scanning system that used optical mark and character recognition to convert the responses into computer files. The optical character recognition, or OCR, process used several pattern and context checks to estimate accuracy thresholds for each write-in field. The system also used edits on interpreted write-in responses to decide whether the field values read by the machine interpretation were acceptable. If the value read had a lower than acceptable accuracy threshold or was outside of the edit range, the image of the item was displayed to a keyer, who then entered the response.

To control the creation of possibly erroneous persons from questionnaires completed incorrectly or containing stray marks, an edit on the number of persons indicated on each mail return and enumerator-filled questionnaire was implemented as part of the data capture system. In addition, a new edit identified questionnaires with information written outside of the response boxes. Detection of either of these conditions by the edits subsystem resulted in the review of the questionnaire image at a workstation by an operator who ensured that the person data were captured fully and correctly.

At Census Bureau headquarters, the data records were subjected to a computer edit that identified households exhibiting a possible coverage problem and those with more than six household members. Attempts were made to contact these households on the telephone to correct the count inconsistency and to collect the census data for those people for whom there was no room on the questionnaire.

Count Imputation

Once census processing is completed, each address included in the census data collection has to be classified as a nonexistent unit, a vacant unit, or an occupied housing unit. Records that are classified as an occupied unit also need a reported number of residents. This information is necessary to have a complete count of the population and housing units in the United States as of Census Day. Because of the complexity of census operations, there are records that do not have such information by the end of the follow-up activities and data processing. To fill in this missing information, the Census Bureau conducted count imputation, which assigns a unit status and household size to records without such information. This process also included assigning household size to occupied units without household size information. Count imputation processing did not include group quarters.

In count imputation, all the records in the enumeration universe were partitioned within a designated geographical area into small groups based on certain characteristics. For each small group, a probability distribution of unit status and size from the records that had this information was created. Then, the distribution was used to impute for the missing data status and/or household size.

General Imputation Rules

The final automated edit and imputation processes determined the final values of questionnaire data items for records with missing or invalid values in collected data. Imputations, which were needed most often when an entry for a given item was missing, included three general procedures known as assignments, allocations, and substitution. Assignments and allocations were imputations of characteristic items on an item-by-item basis, whereas the substitution process imputed data for up to six persons in a household at one time. Each of these procedures ensured the completeness and consistency of the data by providing acceptable codes for missing or unacceptable entries.

The first step in the edit process was to assign acceptable codes in place of unacceptable entries or blanks when acceptable data were found for that same person. When one characteristic item reported for a person was inconsistent with other information provided for that same person, acceptable codes or values that were consistent with one item of reported information were assigned. The edit procedures also assigned race or Hispanic origin from a matched person record in Census 2000 or in the American Community Survey (2000–2009) when these fields were missing. These assignment steps strove to ensure consistency across characteristic data.

The next step in the edit process, known as allocation, was to impute responses for missing person or housing-unit characteristic data. The general procedure for changing unacceptable entries through allocation was to derive an entry for a person (or housing unit) that was consistent with entries for another person (or housing unit) with similar characteristics. Allocation rates for census items were made available with the published census data.

Another way corrections are made during the edit and imputation process was through substitution; that is, the replication of a full set of characteristics for people in a household. When there was an indication that a household was occupied by a specified number of people but the questionnaire record contained no information for the people within the household or the occupants were not listed on the questionnaire, a previously accepted household of the same size was selected as a substitute. The full set of characteristics of the substitute was duplicated. Counts of substituted persons and the occupied housing units containing substituted persons were made available with the published census data.

Chapter 8. User Updates

User updates supply data users with additional or corrected information that becomes available after the technical documentation or files are prepared. They are issued in a numbered series and are available in portable document format (PDF) on our Web site at <www.census.gov>. Please file the user updates cover sheet behind this notice. If there are technical documentation replacement pages, they should be filed in their proper location and the original pages should be destroyed.

2010 Census Summary File 2

Data Note 1

Technical Note on Comparing Statistics on Same-Sex Couple Households Between the 2010 Census and the American Community Survey

Tabulations from the 2010 Census Summary File 1 present detailed geographical information on the number of same-sex unmarried-couple households. This number combines those who initially reported that they were spouses of the householder and those who were unmarried partners of the householder.

Tables PCT15 and PCT17 in Summary File 1 show the presence of children in the household.

Since 2005, statistics on characteristics of same-sex couple households—both for those identified as spouses and as unmarried partners—have been released from the American Community Survey (ACS).¹ The ACS is a nationally representative household survey of 3 million households that contains detailed social, economic, and housing items formerly contained on the long or sample form of the decennial census.

Data users are advised not to make comparisons of estimated numbers of same-sex couple households between the ACS and the 2010 Census because of differences in data collection procedures. Although the majority of both ACS and census returns were collected via mail, differences occur in the data collection instruments for the households not responding by mail.

For the 2010 Census, individual enumerators were sent out to the nonresponding households and were administered a paper form for Nonresponse Follow-Up (NRFU). The ACS did not employ a paper form for follow-up but collected the information in person using a laptop computer (CAPI) or by telephone using a computerized instrument (CATI). These instruments had a key collection component that was absent from the paper form. When an interviewer recorded that a household was headed by a same-sex spouse, a message in a “pop-up box” appeared on the instrument screen that prompted the interviewer to verify the responses to the relationship and the gender items. Previous Census Bureau research has demonstrated the sensitivity of same-sex couple estimates to different data collection procedures.² Subsequent analysis of 2010 Census data on same-sex couple households has examined the differences noted between the 2010 Census and the ACS in the estimates of same-sex couple households.³

December 2011

2010 Census Summary File 2

Data Note 2

Geocoding errors can occur when a living quarter such as a house, apartment, or military vessel, is placed in an incorrect location. As a result of a geocoding error, the Census Bureau is providing revised population counts for two 2010 Census tabulation blocks in Norfolk, Virginia. The geocoding error placed ships ported at the Norfolk Naval Station incorrectly in block 1000, census tract 38, Norfolk city. These ships correctly belong in block 1044, census tract 9.02, Norfolk city.

The corrected and original population counts are:

Population in corrected block 1000, census tract 38	Population in corrected block 1044, census tract 9.02	Population in original block 1000, census tract 38	Population in original block 1044, census tract 9.02
73	19,279	19,352	0

For additional information, see <www.census.gov/rdo/pdf/VA_errata.pdf>.

This note is applicable to 2010 Census data products containing data at the census tract or block levels, including:

- Redistricting Data (Public Law 94-171) Summary File
- Advance Group Quarters Summary File
- Summary File 1
- Summary File 2
- Congressional District Summary File (113th Congress) and subsequent releases
- State Legislative District Summary File and subsequent releases

December 2011

2010 Census Summary File 2 Data Note 3

Geocoding errors can occur when a living quarter such as a house, apartment, or military vessel, is placed in an incorrect location. We discovered a systematic error in the manner in which a few military vessels were geocoded, including an error involving Coronado city and San Diego city, California. As a result, the Census Bureau provided in March 2011 revised population counts for two 2010 Census tabulation blocks.

The corrected and original population counts are:

Population in corrected block 1029, census tract 113, San Diego city, CA	Population in corrected block 1000, census tract 113, Coronado city, CA	Population in original block 1029, census tract 113, San Diego city, CA	Population in original block 1000, census tract 113, Coronado city, CA
0	5,785	5,785	0

For additional information, see <www.census.gov/rdo/pdf/CA_errata.pdf>.

This note is applicable to 2010 Census data products containing data at the place, census tract, or block levels, including:

- Redistricting Data (Public Law 94-171) Summary File

2010 Census Summary File 2

Data Note 4

Geocoding errors can occur when a living quarter such as a house, apartment, or military vessel, is placed in an incorrect location. We discovered a systematic error in the manner in which a few military vessels were geocoded, including an error involving Groton city and Conning Towers Nautilus Park census designated place (CDP), both of which are located in Groton town, New London County, Connecticut. As a result, the Census Bureau provided in March 2011 revised population counts for two 2010 Census tabulation blocks.

The corrected and original population counts are:

Population in corrected block 1001, census tract 7026, Groton city, CT	Population in corrected block 1020, census tract 9800, Conning Towers Nautilus Park CDP, CT	Population in original block 1001, census tract 7026, Groton city, CT	Population in original block 1020, census tract 9800, Conning Towers Nautilus Park CDP, CT
32	994	1,026	0

Data Note 5

Geocoding errors can occur when a living quarter such as a house, apartment, or military vessel, is placed in an incorrect location. We discovered a systematic error in the manner in which a few military vessels were geocoded, including an error involving Pascagoula city, Mississippi. As a result, the Census Bureau provided in March 2011 revised population counts for two 2010 Census tabulation blocks.

The corrected and original population counts are:

Population in corrected block 1305, census tract 429, Pascagoula city, MS	Population in corrected block 1278, census tract 429, Pascagoula city, MS	Population in original block 1305, census tract 429, Pascagoula city, MS	Population in original block 1278, census tract 429, Pascagoula city, MS
0	32	32	0

2010 Census Summary File 2

Data Note 8

In the 2010 Census summary file geographic header record, the "Area Name-Legal/Statistical Area Description (LSAD) Term-Part Indicator" (Data Dictionary Reference NAME, starting position 227), is limited to 90 characters. Area names exceeding 90 characters in length are truncated. Truncation occurs only in geographic summary level 269, "American Indian Area/Alaska Native Area/Hawaiian Home Land-State-Place/Remainder," in the Summary File 1 and 2 national files. The truncated names also appear in detailed tables for this geographic summary level in American FactFinder.

The truncated names are shown below, followed by the full names:

Minnesota part of the Remainder of Ho-Chunk Nation Reservation and Off-Reservation Trust L
Minnesota part of the Remainder of Ho-Chunk Nation Reservation and Off-Reservation Trust Land

Wisconsin part of the Remainder of Ho-Chunk Nation Reservation and Off-Reservation Trust L
Wisconsin part of the Remainder of Ho-Chunk Nation Reservation and Off-Reservation Trust Land

North Dakota part of the Remainder of Lake Traverse Reservation and Off-Reservation Trust
North Dakota part of the Remainder of Lake Traverse Reservation and Off-Reservation Trust Land

South Dakota part of the Remainder of Lake Traverse Reservation and Off-Reservation Trust
South Dakota part of the Remainder of Lake Traverse Reservation and Off-Reservation Trust Land

New Mexico part of the Remainder of Navajo Nation Reservation and Off-Reservation Trust La
New Mexico part of the Remainder of Navajo Nation Reservation and Off-Reservation Trust Land

Montana part of the Remainder of Northern Cheyenne Indian Reservation and Off-Reservation
Montana part of the Remainder of Northern Cheyenne Indian Reservation and Off-Reservation Trust Land

South Dakota part of the Remainder of Northern Cheyenne Indian Reservation and Off-Reserva
South Dakota part of the Remainder of Northern Cheyenne Indian Reservation and Off-Reservation Trust Land

Kansas part of the Remainder of Sac and Fox Nation Reservation and Off-Reservation Trust L
Kansas part of the Remainder of Sac and Fox Nation Reservation and Off-Reservation Trust Land

Nebraska part of the Remainder of Sac and Fox Nation Reservation and Off-Reservation Trust
Nebraska part of the Remainder of Sac and Fox Nation Reservation and Off-Reservation Trust Land

California part of the Remainder of Timbi-Sha Shoshone Reservation and Off-Reservation Tru
California part of the Remainder of Timbi-Sha Shoshone Reservation and Off-Reservation Trust Land

Nevada part of the Remainder of Timbi-Sha Shoshone Reservation and Off-Reservation Trust L
Nevada part of the Remainder of Timbi-Sha Shoshone Reservation and Off-Reservation Trust Land

Montana part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trust Lan
Montana part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trust Land

North Dakota part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trus
North Dakota part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trust Land

South Dakota part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trus
South Dakota part of the Remainder of Turtle Mountain Reservation and Off-Reservation Trust Land

New Mexico part of the Remainder of Ute Mountain Reservation and Off-Reservation Trust Lan
New Mexico part of the Remainder of Ute Mountain Reservation and Off-Reservation Trust Land

March 2012

2010 Census Summary File 2

Data Note 9

As part of the release of Summary File 2 (SF2) data, the Census Bureau released quick-tables DP-1, QT-P1, and QT-P13 for 38 states between December 15, 2011, and April 5, 2012. Some of the data cells in these tables were found to be erroneous, and the tables were removed on April 9, 2012. The data cells will be corrected and the three tables re-released as soon as possible.

In quick-table DP-1, the male institutionalized population count and percentage were incorrect. In quick-table QT-P1, the percentages of the both sexes, male, and female population shown for ages 16 years and over, 18 years and over, 21 years and over, 60 years and over, 62 years and over, 67 years and over, and 75 years and over were incorrect. In QT-P13, the percentages shown for the total institutionalized and noninstitutionalized population in age groups under 18 years, 18 to 64 years, and 65 years and over were based on the total group quarters counts by sex (both sexes, male, and female), rather than on the total institutionalized and noninstitutionalized populations by sex as intended. The intended percentages show the age distribution by sex within the institutionalized and noninstitutionalized population and would correspond to table QT-P13 previously released in Summary File 1. Corrected quick-tables will be released shortly.

2010 Census Summary File 2

Geography Note 1

Alabama (01)

Belle Fontaine CDP (05212), Mobile County (097)

Belle Fontaine CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Brook Highland CDP (09500), Shelby County (117)

Brook Highland CDP ANSI Place Code (PLACENS) should be 02403203; it is incorrectly shown as 02582665.

Gulfcrest CDP (32248), Mobile County (097)

Gulfcrest CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Joppa CDP (39088), Cullman County (043)

Joppa CDP FIPS Place Code (PLACE) should be 39064; it is incorrectly shown as 39088.

Morrison Crossroads CDP (51468), Randolph County (111)

Morrison Crossroads CDP FIPS Place Code (PLACE) should be 51469; it is incorrectly shown as 51468.

Tri-Cities CCD (93186), Colbert County (033)

Florence CCD (91143), Lauderdale County (077)

The county boundary between Colbert and Lauderdale counties, Alabama, should be following a line within Wilson Lake and not the southern shoreline for a portion of the county boundary. The correction adds water area only to Tri-Cities CCD (93186), Colbert County (033) from Florence CCD (91143), Lauderdale County (077).

The change affects all or part of the area within the following Census Tracts and blocks in Lauderdale County:

Census Tract 101, Blocks 1000 and 1008.

Census Tract 102, Block 2045.

Census Tract 108, Blocks 4033, 4034, and 4037.

Census Tract 112, Block 2070.

Census Tract 115.01, Block 3007.

The affected area contains 0 population, 0 housing units, and a water area of 3,789,788 square meters (1.463 square miles).

February 2012

2010 Census Summary File 2

Geography Note 2

Alaska (02)

Kachemak city (36550), Kenai Peninsula Borough (122)

Kachemak city FIPS Place Code (PLACE) should be 36540; it is incorrectly shown as 36550.

Sitka city and borough (70540) [place], Sitka City and Borough (220)

Sitka city and borough [place] should be coextensive with Sitka City and Borough [county equivalent].

Sitka city and borough [place] should include Blocks 5013, 5016, and 5017 in Census Tract 2; they are incorrectly coded as not in any place. The affected area contains 0 population, 0 housing units, and a water area of 116,123 square meters (0.044 square miles). The corrected water area for Sitka city and borough [place] is 5,027,404,028 square meters (1,941.092 square miles).

February 2012

2010 Census Summary File 2

Geography Note 3

Arizona (04)

Gila River Reservation (2130/27330), Maricopa County (013)

Gila River Reservation should not exist in Chandler CCD (90561) and should not include Block 1091 in Census Tract 8160; this block should be coded outside any American Indian, Alaska Native, and Native Hawaiian area. The affected area contains 0 population, 0 housing units, and a land area of 542 square meters (rounds to 0.000 square miles). The corrected land area for Gila River Reservation is 84,901,174 square meters (32.781 square miles).

Gold Canyon CDP (28120), Pinal County (021)

Gold Canyon CDP FIPS Place Code (PLACE) should be 28140; it is incorrectly shown as 28120.

Grand Canyon Village CDP (28981), Coconino County (005)

Grand Canyon Village CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Hotevilla-Bacavi CDP (33945), Navajo County (017)

Hotevilla-Bacavi CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Ko Vaya CDP (38940), Pima County (019)

Ko Vaya CDP FIPS Place Code (PLACE) should be 38950; it is incorrectly shown as 38940.

Morristown CDP (47740), Maricopa County (013)

Morristown CDP FIPS Place Code (PLACE) should be 47750; it is incorrectly shown as 47740.

Navajo Nation Reservation and Off-Reservation Trust Land (2430/48845), Apache (001), Coconino (005), and Navajo (017) Counties (part—also in New Mexico and Utah)

Navajo Nation Reservation and Off-Reservation Trust Land ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 00041148; it is incorrectly shown as 00042851. This change also applies to records consisting of the Reservation only and Trust Land only portions of the American Indian area.

Red Rock CDP (59760), Apache County (001)

Red Rock CDP FIPS Place Code (PLACE) should be 59690; it is incorrectly shown as 59760. The latter code is the correct FIPS Place Code for Red Rock CDP (59770) in Pinal County (021).

Red Rock CDP (59770), Pinal County (021)

Red Rock CDP FIPS Place Code (PLACE) should be 59760; it is incorrectly shown as 59770.

Theba CDP (73480), Maricopa County (013)

Theba CDP FIPS Place Code (PLACE) should be 73490; it is incorrectly shown as 73480.

Tohono O'odnam Nation CCD (93375), Pima County (019)

Tohono O'odnam Nation CCD name should be Tohono O'odham Nation CCD; it is incorrectly shown as Tohono O'odnam Nation CCD.

Tohono O'odnam Nation CCD (93377), Pinal County (021)

Tohono O'odnam Nation CCD name should be Tohono O'odham Nation CCD; it is incorrectly shown as Tohono O'odnam Nation CCD.

Whetstone CDP (82155), Cochise County (003)

Whetstone CDP FIPS Place Code (PLACE) should be 82156; it is incorrectly shown as 82155.

Why CDP (82660), Pima County (019)

Why CDP FIPS Place Code (PLACE) should be 82670; it is incorrectly shown as 82660.

February 2012

2010 Census Summary File 2

Geography Note 4

Arkansas (05)

Hiwasse CDP (32535), Benton County (007)

Hiwasse CDP FIPS Place Code (PLACE) should be 32530; it is incorrectly shown as 32535.

Vaugine township (93783), Jefferson County (069)

Vaugine township should not contain Block 3012 in Census Tract 3.02; this block should be in Washington township (93918). The change for this block removes White Hall city (75170) from Vaugine township. The affected area contains 0 population, 0 housing units, and a land area of 1,027 square meters (rounds to 0.000 square miles). The correct land area for Vaugine township is 176,178,788 square meters (68.023 square miles).

Washington township (93918), Jefferson County (069)

Washington township should contain Block 3012 in Census Tract 3.02; it is erroneously coded to Vaugine township (93783). The change for this block makes White Hall city (75170) exist only in Washington township. The affected area contains 0 population, 0 housing units, and a land area of 1,027 square meters (rounds to 0.000 square miles). The correct land area for Washington township is 161,039,026 square meters (62.178 square miles).

White Hall city (75170), Jefferson County (069)

White Hall city should not exist in Vaugine township (93783). Block 3012 in Census Tract 3.02 (and in White Hall city) should be Washington township; it is erroneously coded to Vaugine township (93783). The change for this block makes White Hall city (75170) exist only in Washington township.

February 2012

2010 Census Summary File 2

Geography Note 5

California (06)

Census Tract 1370 (137000), Los Angeles County (037)

Census Tract 1370 (137000), Block Group 1 (1), Los Angeles County (037)

Census Tract 1370 (137000), Block Group 2 (2), Los Angeles County (037)

Census Tract 1370 should be shown for the 2010 Census and include all of Census Tract 9304.01 (930401) and part of Census Tract 8002.04 (800204). The 2000 Census Tract 1370 was erroneously deleted. The following lists the blocks that should be assigned to Census Tract 1370 for each block group:

Census Tract 1370, Block Group 1 should include:

Census Tract 9304.01, Blocks 1000–1005, 1007–1012, 1016, 1017, and 1019–1029.

The corrected Block Group 1 contains 2,139 population, 833 housing units, a land area of 1,180,118 square meters (0.456 square miles), and a water area of 4,374 square meters (0.002 square miles).

Census Tract 1370, Block Group 2 should include:

Census Tract 8002.04, Blocks 3000–3029 (all of Block Group 3).

Census Tract 9304.01, Blocks 1006, 1013, 1014, 1015, and 1018.

The corrected Block Group 2 contains 2,558 population, 933 housing units, a land area of 1,825,661 square meters (0.705 square miles), and a water area of 0 square meters.

The corrected Census Tract 1370 contains 4,697 population, 1,766 housing units, a land area of 3,005,779 square meters (1.160 square miles), and a water area of 4,374 square meters (0.002 square miles).

Census Tract 8002.04 (800204), Los Angeles County (037)

Census Tract 8002.04 (800204), Block Group 3 (3), Los Angeles County (037)

Census Tract 8002.04 should not contain all of Block Group 3 consisting of Blocks 3000–3029. All of Block Group 3 should be assigned to Census Tract 1370 (137000), Block Group 2. Census Tract 1370 was erroneously deleted for 2010. The affected area contains 2,226 population, 809 housing units, a land area of 1,619,419 square meters (0.625 square miles), and a water area of 0 square meters. The corrected Census Tract 8002.04 contains 4,514 population, 1,832 housing units, a land area of 7,900,463 square meters (3.050 square miles), and a water area of 126,749 square meters (0.049 square miles).

Census Tract 9304.01 (930401), Los Angeles County (037)

Census Tract 9304.01 (930401), Block Group 1 (1), Los Angeles County (037)

Census Tract 9304.01 and Block Group 1 should not be shown for the 2010 Census; the entire area should be coded to Census Tract 1370 (137000), with Blocks 1006, 1013, 1014, 1015, and 1018 assigned to Census Tract 1370, Block Group 2 and the remaining blocks assigned to Block Group 1. Census Tract 1370 was erroneously deleted for 2010.

Census Tract 133.1 (013310), San Diego County (073)

Census Tract 133.1 name should be 133.10; it is incorrectly shown as 133.1.

Census Tract 615.00 (061500), San Francisco County (075)

Census Tract 615.00 name should be 615; it is incorrectly shown as 615.00.

Blackhawk CDP (06928), Contra Costa County (013)
 Blackhawk CDP ANSI Place Code (PLACENS) should be 02407859; it is incorrectly shown as 02633169.

Calwa CDP (10031), Fresno County (019)
 Calwa CDP FIPS Place Code (PLACE) should be 10032; it is incorrectly shown as 10031.

Contra Costa Centre CDP (83215), Contra Costa County (013)
 Contra Costa Centre CDP FIPS Place Code (PLACE) should be 16090 and FIPS Place Class Code (PLACECC) should be U2; they are incorrectly shown as 83215 and U1, respectively.

Crestmore Heights CDP (17204), Riverside County (065)
 Crestmore Heights CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

East Rancho Dominguez CDP (21034), Los Angeles County (037)
 East Rancho Dominguez CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Homewood Canyon CDP (34405), Inyo County (027)
 Homewood Canyon CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Hoop Valley Reservation (1490/34554), Humboldt County (023)
 Hoopa Valley Reservation ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 00251972; it is incorrectly shown as 00252109.

Pleasure Point CDP (53924), Santa Cruz County (087)
 Pleasure Point CDP FIPS Place Code (PLACE) should be 57825 and FIPS Place Class Code (PLACECC) should be U2; they are incorrectly shown as 53924 and U1, respectively.

San Miguel CDP (68263), Contra Costa County (013)
 San Miguel CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

San Pasqual CDP (68308), Los Angeles County (037)
 San Pasqual CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Silver Lakes CDP (71964), San Bernardino County (071)
 Silver Lakes CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Spring Valley Lake CDP (73700), San Bernardino County (071)
 Spring Valley Lake CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Temescal Valley CDP (78134), Riverside County (065)
 Temescal Valley CDP FIPS Place Code (PLACE) should be 78138 and FIPS Place Class Code (PLACECC) should be U2; they are incorrectly shown as 78134 and U1, respectively.

Topaz CDP (79030), Mono County (051)
 Topaz CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Vincent CDP (82814), Los Angeles County (037)
 Vincent CDP FIPS Place Code (PLACE) should be 82815; it is incorrectly shown as 82814.

West Goshen CDP (84345), Tulare County (107)
 West Goshen CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Whitewater CDP (85206), Riverside County (065)
 Whitewater CDP FIPS Place Code (PLACE) should be 85208; it is incorrectly shown as 85206.

Census Tract 128.00 name should be 128; it is incorrectly shown as 128.00.

Beech Grove city (04204), Marion County (097)

Beech Grove city should not be part of Indianapolis city (36000) [consolidated city]. Indianapolis city should not include Blocks 1007 and 1012 in Census Tract 3575, which are correctly coded to Beech Grove city. The affected area contains 0 population, 0 housing units, a land area of 173,256 square meters (0.067 square miles), and a water area of 0 square meters.

Indianapolis city (36000) [consolidated city], Marion County (097)

Indianapolis city [consolidated city] should not include parts of Beech Grove (04204) and Lawrence (42426) cities and should include all of Indianapolis city (balance) (36003) [place].

The following blocks should not be in Indianapolis city [consolidated city]:

Census Tract 3308.04, Blocks 1007 and 1013.

Census Tract 3308.05, Blocks 2011, 2013, 2020, 2021, 2032, 2033, 2035, 3012, and 3013.

Census Tract 3575, Blocks 1007 and 1012.

The affected area contains 42 population, 18 housing units, a land area of 204,841 square meters (0.079 square miles), and a water area of 0 square meters.

The following blocks should be in Indianapolis city [consolidated city]:

Census Tract 3401.08, Blocks 2016–2018.

Census Tract 3409.02, Blocks 1022 and 1023.

The affected area contains 0 population, 0 housing units, a land area of 22,097 square meters (0.009 square miles), and a water area of 0 square meters.

The corrected counts for Indianapolis city [consolidated city] are 829,676 population, 384,396 housing units, a land area of 948,934,867 square meters (366.386 square miles), and a water area of 17,072,644 square meters (6.592 square miles).

Indianapolis city (balance) (36003) [place], Marion County (097)

All of Indianapolis city (balance) [place] should be included in Indianapolis city (36000) [consolidated city]. Indianapolis city should include Blocks 2016–2018 in Census Tract 3401.08 and Blocks 1022 and 1023 in Census Tract 3409.02, which are correctly coded to Indianapolis city (balance). The affected area contains 0 population, 0 housing units, a land area of 22,097 square meters (0.009 square miles), and a water area of 0 square meters.

Indianapolis Public Schools (04770) [unified school district], Marion County (097)

Indianapolis Public Schools should not include Blocks 2011, 2013, 2020, 2021, 2032, 2033, 2035, 3012, and 3013 in Census Tract 3308.05; these blocks should be coded to Lawrence Township Metropolitan School District (05670) [unified school district]. The affected area contains 1 population, 1 housing unit, a land area of 26,022 square meters (0.010 square miles), and a water area of 0 square meters.

The corrected counts for Indianapolis Public Schools are 296,714 population, 148,095 housing units, a land area of 203,317,551 square meters (78.501 square miles), and a water area of 2,720,113 square meters (1.050 square miles).

Lawrence city (42426), Marion County (097)

Lawrence city should not be part of Indianapolis city (36000) [consolidated city]. Indianapolis city should not include Blocks 1007 and 1013 in Census Tract 3308.04 and Blocks 2011, 2013, 2020, 2021, 2032, 2033, 2035, 3012, and 3013 in Census Tract 3308.05, which are correctly coded to Lawrence city. The affected area contains 42 population, 18 housing units, a land area of 31,585 square meters (0.012 square miles), and a water area of 0 square meters.

Lawrence Township Metropolitan School District (05670) [unified school district], Marion County (097)

Lawrence Township Metropolitan School District should include Blocks 2011, 2013, 2020, 2021, 2032, 2033, 2035, 3012, and 3013 in Census Tract 3308.05; these blocks are incorrectly coded to Indianapolis Public Schools (04770) [unified school district]. The affected area contains 1 population, 1 housing unit, a land area of 26,022 square meters (0.010 square miles), and a water area of 0 square meters.

The corrected counts for Lawrence Township Metropolitan School District are 95,615 population, 41,741 housing units, a land area of 108,817,599 square meters (42.025 square miles), and a water area of 4,204,948 square meters (1.624 square miles).

St. Mary of the Woods CDP (67050), Vigo County (167)

St. Mary of the Woods CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Speedway School Town (10920) [unified school district], Marion County (097)

Speedway School Town should not include Blocks 2016–2018 in Census Tract 3401.08; these blocks should be coded Wayne Township Metropolitan School District (12810) [unified school district]. The affected area contains 0 population, 0 housing units, a land area of 19,883 square meters (0.008 square miles), and a water area of 0 square meters. The corrected land area for Speedway School Town is 12,343,746 square meters (4.758 square miles).

Wayne Township Metropolitan School District (12810) [unified school district], Marion County (097)

Wayne Township Metropolitan School District should include should include Blocks 2016–2018 in Census Tract 3401.08; these blocks are incorrectly coded to Speedway School Town (1092) [unified school district]. The affected area contains 0 population, 0 housing units, a land area of 19,883 square meters (0.008 square miles), and a water area of 0 square meters. The corrected land area for Wayne Township Metropolitan School District is 87,536,836 square meters (33.798 square miles).

Westfield town (82700), Hamilton County (057)

Westfield town Legal/Statistical Area Description should be city (Westfield city). The Legal/Statistical Area Description Code (LSADC) should be 25; it is incorrectly shown as 43.

Penobscot Reservation and Off-Reservation Trust Land ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 00582669; it is incorrectly shown as 01913813. This change also applies to records consisting of the Reservation only and Trust Land only portions of the American Indian area.

February 2012

2010 Census Summary File 2

Geography Note 20

Maryland (24)

Congressional Districts

Maryland's congressional district plan, as provided to the Census Bureau, did not provide congressional district assignments for area within parts of the Chesapeake Bay and the Atlantic Ocean for the 111th Congress. Due to errors in coding, 98 blocks where no congressional district was assigned contained polygons coded as land. The total land area where no congressional district was assigned is 1,002,848 square meters (0.387 square miles). One block—Block 4158, Census Tract 8762, in St. Mary's County—had 0 population, but 1 housing unit in a block not assigned to a congressional district.

Bensville CDP (06615), Charles County (017)

Bensville CDP FIPS Place Code (PLACE) should be 06662; it is incorrectly shown as 06615.

Dunkirk CDP (24062), Calvert County (009)

Dunkirk CDP FIPS Place Code (PLACE) should be 24050; it is incorrectly shown as 24062.

Eakles Mill CDP (24250), Washington County (043)

Eakles Mill CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Huntingtown CDP (41037), Calvert County (009)

Huntingtown CDP FIPS Place Code (PLACE) should be 41025; it is incorrectly shown as 41037.

Leisure World CDP (46375), Montgomery County (031)

Leisure World CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Melwood CDP (51860), Prince George's County (033)

Melwood CDP FIPS Place Code (PLACE) should be 51940 and Place Class Code (PLACECC) should be U2; they are incorrectly shown as 51860 and U1, respectively.

North Laurel CDP (56725), Howard County (027)

North Laurel CDP was incorrectly defined. In addition to the area defined for the 2010 Census, North Laurel CDP also should include the following tracts and blocks coded as part of Scaggsville CDP (70530):

Census Tract 6069.06, entire tract.

Census Tract 6068.06, Blocks 1024–1050, 1058.

Census Tract 6069.04, Blocks 1000–1005, 3000–3027.

Census Tract 6069.05, Blocks 3093, 3099, 3102.

Census Tract 6069.07, Blocks 1007–1026, 2000–2007, 3000–3029.

The affected area contains 15,785 population, 5,957 housing units, a land area of 13,127,612 square meters (5.069 square miles), and a water area of 39,893 square meters (0.015 square miles).

The corrected counts for North Laurel CDP are 20,259 population, 7,593 housing units, a land area of 16,320,449 square meters (6.301 square miles), and a water area of 147,831 square meters (0.057 square miles).

Scaggsville CDP (70530), Howard County (027)

Scaggsville CDP was incorrectly defined. The area defined includes the following tracts and blocks that should have been coded to North Laurel CDP (56725):

Census Tract 6069.06, entire tract.

Census Tract 6068.06, Blocks 1024–1050, 1058.

Census Tract 6069.04, Blocks 1000–1005, 3000–3027.

Census Tract 6069.05, Blocks 3093, 3099, 3102.

Census Tract 6069.07, Blocks 1007–1026, 2000–2007, 3000–3029.

The affected area contains 15,785 population, 5,957 housing units, a land area of 13,127,612 square meters (5.069 square miles), and a water area of 39,893 square meters (0.015 square miles).

The corrected counts for Scaggsville CDP are 8,548 population, 2,838 housing units, a land area of 13,514,192 square meters (5.218 square miles), and a water area of 913,012 square meters (0.353 square miles).

Scaggsville CDP (70530), Howard County (027)

Scaggsville CDP FIPS Place Code (PLACE) should be 70525; it is incorrectly shown as 70530.

Suitland CDP (75725), Prince George's County (033)

Suitland CDP ANSI Place Code (PLACENS) should be 02652341; it is incorrectly shown as 02390372.

Wheaton CDP (83775), Montgomery County (031)

Wheaton CDP ANSI Place Code (PLACENS) should be 02652342; it is incorrectly shown as 02390503.

February 2012

2010 Census Summary File 2

Geography Note 21

Massachusetts (25)

Abington town (00170), Plymouth County (023)

Abington town should include all of Block 3008 and part of Block 3005 in Census Tract 5022; these blocks were incorrectly coded to Rockland town (57775). This change restores the 2000 location of the town boundary and adds Southfield CDP to Abington town. The affected area contains 0 population, 0 housing units, a land area of 767,905 square meters (0.296 square miles), and a water area of 0 square meters. The corrected land area for Abington town is 25,765,375 square meters (9.948 square miles).

East Douglas CDP (18875) and Uxbridge town (71620), Worcester County (027)

East Douglas CDP should not include Block 1043 in Census Tract 7491 in Charlton town; this block should be coded outside any place. This change removes East Douglas CDP from Uxbridge town. The affected area contains 0 population, 0 housing units, a land area of 259,582 square meters (0.100 square miles), and a water area of 432 square meters (rounds to 0.000 square miles). The corrected areas for East Douglas CDP are a land area of 8,824,641 square meters (3.407 square miles) and a water area of 312,009 square meters (0.120 square miles).

Rockland town (57775), Plymouth County (023)

Rockland town should not include all of Block 3008 and part of Block 3005 in Census Tract 5022; these blocks should be coded to Abington town (00170). This change restores the 2000 location of the town boundary. The affected area contains 0 population, 0 housing units, a land area of 767,905 square meters (0.296 square miles), and a water area of 0 square meters. The corrected land area for Rockland town is 25,971,988 square meters (10.028 square miles).

Southfield CDP (63840), Plymouth County (023)

Southfield CDP Block 3008 and part of Block 3005 in Census Tract 5022 should be coded to Abington town (00170); these blocks were incorrectly coded to Rockland town (57775). This change restores the 2000 location of the town boundary and adds Southfield CDP to Abington town.

Southfield CDP (63840), Plymouth County (023)

Southfield CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Sturbridge CDP (68120) and Charlton town (12715), Worcester County (027)

Sturbridge CDP should not include Block 2074 in Census Tract 7561.01 in Charlton town; this block should be coded outside any place. This change removes Sturbridge CDP from Charlton town. The affected area contains 0 population, 0 housing units, a land area of 470,024 square meters (0.181 square miles), and a water area of 0 square meters. The corrected land area for Sturbridge CDP is 13,782,870 square meters (5.322 square miles).

First Bristol & Plymouth District (021) [State Legislative District (Upper Chamber)], Bristol County (005)

First Bristol & Plymouth District in Bristol County was incorrectly defined including water area that should be coded to ZZZ (State Senate Districts not defined). Census Tract 6441.01, Blocks 2007 and 2013 should be coded to State Legislative District (Upper Chamber) (SLDUST) ZZZ. The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 38,061 square meters (0.015 square miles).

Second Bristol & Plymouth District (022) [State Legislative District (Upper Chamber)], Bristol County (005)

Second Bristol & Plymouth District in Bristol County was incorrectly defined including water area that should be coded to ZZZ (State Senate Districts not defined). Census Tract 6503, Block 2012 should be coded to State Legislative District (Upper Chamber) (SLDUST) ZZZ. The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 13,607 square meters (0.005 square miles).

Norfolk, Bristol & Plymouth District (044) [State Legislative District (Upper Chamber)], Norfolk County (021)

Norfolk, Bristol & Plymouth District in Norfolk County was incorrectly defined including water area that should be coded to ZZZ (State Senate Districts not defined). Census Tract 4164, Blocks 1001 and 1004 should be coded to State Legislative District (Upper Chamber) (SLDUST) ZZZ. The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 12,050 square meters (0.005 square miles).

Plymouth & Barnstable District (047) [State Legislative District (Upper Chamber)], Barnstable County (001)

Plymouth & Barnstable District in Barnstable County was incorrectly defined including water area that should be coded to ZZZ (State Senate Districts not defined). Census Tract 147, Blocks 1052 and 2052 should be coded to State Legislative District (Upper Chamber) (SLDUST) ZZZ. The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 1,708 square meters (0.001 square miles).

February 2012

2010 Census Summary File 2

Geography Note 22

Michigan (26)

Congressional Districts 1, 2, 5, 6, 10, and 12–15

Michigan's congressional district plan, as provided to the Census Bureau, did not provide congressional district assignments for water blocks within the Great Lakes for the 111th Congress. There are 633 water blocks that should be coded to no congressional district and are incorrectly assigned to congressional districts 1, 2, 5, 6, 9, 10, and 12–15. These changes occurred in the following 21 counties: Alger (003), Allegan (005), Alpena (007), Antrim (009), Bay (017), Benzie (019), Charlevoix (029), Chippewa (033), Huron (063), Iosco (069), Mackinac (097), Macomb (099), Manistee (101), Muskegon (121), Ottawa (139), Presque Isle (141), Sanilac (151), Schoolcraft (153), Tuscola (157), Van Buren (159), and Wayne (163).

Due to errors in coding, one block where no congressional district was unassigned contained a polygon coded as land. The total land area where no congressional district was assigned is 2 square meters (rounds to 0.000 square miles). The block contained no population or housing.

Almer township (01620), Tuscola County (157)

Almer township should exclude all of Caro village (13420); Caro village became a city and independent of any township before January 1, 2010. The corrected counts for Almer township (excluding Caro city) are 2,115 population, 932 housing units, a land area of 86,491,099 square meters (33.394 square miles), and a water area of 631,354 square meters (0.244 square miles).

Bay Shore CDP (06190), Charlevoix (027) and Emmet (047) Counties

Bay Shore CDP FIPS Place Code (PLACE) should be 06180; it is incorrectly shown as 06190.

Caro village (13420), Tuscola County (157)

Caro village should be shown as a city and as a separate county subdivision that is independent of any township; it is incorrectly shown as dependent in Almer (01620) and Indianfields (40440) townships.

Indianfields township (40440), Tuscola County (157)

Indianfields township should exclude all of Caro village (13420); Caro village became a city and independent of any township before January 1, 2010. The corrected counts for Indianfields township (excluding Caro city) are 2,805 population, 1,093 housing units, a land area of 81,994,738 square meters (31.658 square miles), and a water area of 4,643,845 square meters (1.793 square miles).

Lakeview Public Schools (20880) [unified school district], Macomb County (099)

Lakeview Public Schools should include Census Tract 2510, Block 1017; Census Tract 2511, Block 1015; and Census Tract 2512, Block 1001. These blocks are incorrectly coded to School District Not Defined (Water) (99998) [unified school district]. The affected area contains 243 population, 119 housing units, a land area of 113,909 square meters (0.044 square miles), and a water area of 0 square meters.

The corrected counts for Lakeview Public Schools are 19,869 population, 9,297 housing units, a land area of 9,956,208 square meters (3.844 square miles), and a water area of 1,211 square meters (rounds to 0.000 square miles).

L'Anse Creuse Public Schools (21870) [unified school district], Macomb County (099)

L'Anse Creuse Public Schools should include Census Tract 2474, Block 1007; this block is incorrectly coded to School District Not Defined (Water) (99998) [unified school district]. The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 10,083 square meters (0.004 square miles). The corrected water area for L'Anse Creuse Public Schools is 2,112,812 square meters (0.820 square miles).

School District Not Defined (Water) (99998) [unified school district], Macomb County (099)

School District Not Defined (Water) should not include Census Tract 2474, Block 1007 (which should be coded to L'Anse Creuse Public Schools [21870]); and Census Tract 2510, Block 1017; Census Tract 2511, Block 1015; and Census Tract 2512, Block 1001 (all of which should be coded to Lakeview Public Schools (20880)). The affected area contains 243 population, 119 housing units, a land area of 113,909 square meters (0.044 square miles), and a water area of 10,083 square meters (0.004 square miles).

The corrected counts for School District Not Defined (Water) are 0 population, 0 housing units, a land area of 311,288 square meters (0.120 square miles), and a water area of 23,543,890,069 square meters (9,090.347 square miles).

February 2012

2010 Census Summary File 2

Geography Note 23

Minnesota (27)

Beardsley city (04204), Big Stone County (011)

Beardsley city should be shown as a separate county subdivision that is independent of any township; it is incorrectly shown as dependent in Browns Valley township (08182).

Browns Valley township (08182), Big Stone County (011)

Browns Valley township should exclude all of Beardsley city (04204); Beardsley city became independent of any township before January 1, 2010. The corrected counts for Browns Valley township (excluding Beardsley city) are 125 population, 67 housing units, a land area of 122,189,978 square meters (47.178 square miles), and a water area of 3,144,673 square meters (1.214 square miles).

Great Scott township (25550), St. Louis County (137)

Great Scott township should exclude all of Kinney city (33416); Kinney city became independent of any township before January 1, 2010. The corrected counts for Great Scott township (excluding Kinney city) are 392 population, 209 housing units, a land area of 151,681,796 square meters (58.565 square miles), and a water area of 2,525,002 square meters (0.975 square miles).

Johnson city (32012), Big Stone County (011)

Johnson city should be shown as a separate county subdivision that is independent of any township; it is incorrectly shown as dependent in Moonshine township (43828).

Kinney city (33416), Big Stone County (011)

Kinney city should be shown as a separate county subdivision that is independent of any township; it is incorrectly shown as dependent in Great Scott township (25550).

Lakewood township (35208), Lake of the Woods County (077)

Lakewood township ANSI County Subdivision Code (COUSUBNS) should be 02426870; it is incorrectly shown as 00664712. The latter code is correct for Lakewood township (35234) in St. Louis County (137).

Lakewood township (35234), St. Louis County (137)

Lakewood township ANSI County Subdivision Code (COUSUBNS) should be 00664712; it is incorrectly shown as 02426870. The latter code is correct for Lakewood township (35208) in Lake of the Woods County (077).

Moonshine township (43828), Big Stone County (011)

Moonshine township should exclude all of Johnson city (32012); Johnson city became independent of any township before January 1, 2010. The corrected counts for Moonshine township (excluding Johnson city) are 102 population, 41 housing units, a land area of 96,467,474 square meters (37.246 square miles), and a water area of 46,701 square meters (0.018 square miles).

Navajo Nation Reservation and Off-Reservation Trust Land ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 00041148; it is incorrectly shown as 00042851. This change also applies to records consisting of the Reservation only and Trust Land only portions of the American Indian area.

North Hobbs CDP (52500), Lea County (025)

North Hobbs CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Ohkay Owingeh CDP (52500), Rio Arriba County (039)

Ohkay Owingeh CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

February 2012

2010 Census Summary File 2

Geography Note 31

New York (36)

Census Tract 230 (023000), Block Group 2 (2), Oneida County (065) and
Census Tract 9402 (940200), Block Groups 1(1) and 3 (3), Oneida County (065)

Census Tract 9402, Block Groups 1 and 3 should contain blocks that are coded to Census Tract 230
Block Group 2.

Census Tract 023000, Blocks 2035, 2045, and 2046 should be coded to
Census Tract 940200, Block Group 1.

The affected area contains 6 population, 4 housing units, a land area of 347,963 square meters
(0.134 square miles), and a water area of 0 square meters.

Census Tract 023000, Blocks 2043, 2044, 2047, and 2048 should be coded to
Census Tract 940200, Block Group 3.

The affected area contains 35 population, 15 housing units, a land area of 2,482,279 square meters
(0.958 square miles), and a water area of 0 square meters.

The corrected counts for Census Tract 230 are 6,138 population, 2,493 housing units, a land area of
111,720,701 square meters (43.136 square miles), and a water area of 38,347 square meters (0.015
square miles).

The corrected counts for Census Tract 9402 are 5,408 population, 2,406 housing units, a land area of
97,970,870 square meters (37.827 square miles), and a water area of 28,029 square meters (0.011
square miles).

Beaver Dam Lake CDP (05193), Orange County (071)

Beaver Dam Lake CDP ANSI Place Code (PLACENS) should be 02652336; it is incorrectly shown as
02389188.

Beaver Dam Lake CDP (05193), Orange County (071)

Beaver Dam Lake CDP FIPS Place Code (PLACE) should be 05188; it is incorrectly shown as 05193.

DeKalb Junction CDP (20049), St. Lawrence County (089)

DeKalb Junction CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

East Ithaca CDP (22326), Tompkins County (109)

East Ithaca CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Hannawa Falls CDP (22582), Orleans County (073)

Hannawa Falls CDP ANSI Place Code (PLACENS) should be 02627947; it is incorrectly shown as
02627974.

Lake Luzerne CDP (40648), Warren County (113)

Lake Luzerne CDP FIPS Place Code (PLACE) should be 40651; it is incorrectly shown as 40648.

Lisle town (42653), Broome County (007)

Lisle town should not include Blocks 1096 and 1097 in Census Tract 119.03; these blocks should be
coded to Triangle town (75319). This change removes Whitney Point village (81831) from Lisle town.
The affected area contains 0 population, 0 housing units, a land area of 863 square meters (rounds
to 0.000 square miles), and a water area of 0 square meters. The corrected land area for Lisle town is
121,454,744 square meters (46.894 square miles).

Niskayuna CDP (51275), Schenectady County (093)

Niskayuna CDP FIPS Place Code should be 51262 and FIPS Place Class Code (PLACECC) should be U1; they are incorrectly shown as 51275 and U2, respectively.

Oak Beach-Captree CDP (54112), Suffolk County (103)

Oak Beach-Captree CDP ANSI Place Code (PLACENS) should be 02389842; it is incorrectly shown as 02584280.

Oil Springs Reservation (2535/54523), Allegany (003) and Cattaraugus (009) Counties

Oil Springs Reservation ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 00959239; it is incorrectly shown as 00979303.

Oil Springs Reservation (54523) [county subdivision], Allegany County (003)

Oil Springs Reservation ANSI County Subdivision Code (COUSUBNS) should be 00959239; it is incorrectly shown as 00979303.

Oil Springs Reservation (54523) [county subdivision], Cattaraugus County (009)

Oil Springs Reservation ANSI County Subdivision Code (COUSUBNS) should be 00959239; it is incorrectly shown as 00979303.

Pamelia Center CDP (56212), Jefferson County (045)

Pamelia Center CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Quioque CDP (60411), Suffolk County (103)

Quioque CDP FIPS Place Code (PLACE) should be 60408 and FIPS Place Class Code (PLACECC) should be U2; they are incorrectly shown 60411 and U1, respectively.

Tonawanda CDP (74183), Erie County (029)

Tonawanda CDP should include Block 2057 in Census Tract 84; it is incorrectly coded outside of any place. This change, which is water area only, makes Tonawanda CDP coextensive with the area of Tonawanda town (7500) outside of Kenmore village (39232). The affected area contains 0 population, 0 housing units, a land area of 0 square meters, and a water area of 537,105 square meters (0.207 square miles). The corrected water area for Tonawanda CDP is 3,998,005 square meters (1.544 square miles).

Triangle town (75319), Broome County (007)

Triangle town should include Blocks 1096 and 1097 in Census Tract 119.03; these blocks are incorrectly coded to Lisle town (42653). This change puts all of Whitney Point village (81831) within Triangle town. The affected area contains 0 population, 0 housing units, a land area of 863 square meters (rounds to 0.000 square miles), and a water area of 0 square meters. The corrected land area for Triangle town is 98,095,717 square meters (37.875 square miles).

Whitney Point village (81831), Broome County (007)

Whitney Point village should not appear in Lisle town (42653). Blocks 1096 and 1097 in Census Tract 119.03 should be coded to Triangle town (75319); they are incorrectly coded to Lisle town (42653).

Elmwood UT (23860), Golden Valley County (033)

Elmwood UT ANSI County Subdivision Code (COUSUBNS) should be 02652057; it is incorrectly shown as 01759434.

February 2012

2010 Census Summary File 2

Geography Note 34

Ohio (39)

Congressional Districts 5, 9, and 13

Ohio's congressional district plan, as provided to the Census Bureau, did not provide congressional district assignments for water blocks within the Great Lakes for the 111th Congress. There are 118 water blocks that should be coded to no congressional district and are incorrectly assigned to congressional districts 5, 9, and 13. These changes occurred in the following five counties: Erie (043), Lorain (093), Lucas (095), Ottawa (123), and Sandusky (143).

Due to errors in coding, there were six blocks where no congressional district was unassigned contained polygons coded as land. The total land area where no congressional district was assigned is 13,375 square meters (0.005 square miles). One block—Block 4001, Census Tract 512, in Ottawa County—had 0 population, but 1 housing unit in a block not assigned to a congressional district.

Amanda-Clearcreek Local School District (04684) [unified school district], Fairfield (045) and Muskingum (119) Counties

Amanda-Clearcreek Local School District should not exist in Muskingum County. Blocks 1016–1021, 1023, 1024, and 1029 in Census Tract 9110 in Muskingum County should be in River View Local School District; they are incorrectly coded to Amanda-Clearcreek Local School District. The affected area contains 0 population, 0 housing units, a land area of 2,426,940 square meters (0.937 square miles), and a water area of 328,799 square meters (0.127 square miles). The corrected areas for Amanda-Clearcreek Local School District are a land area of 250,658,578 square meters (96.780 square miles) and a water area of 725,946 square meters (0.280 square miles).

Cinnamon Lake CDP (15008), Ashland County (005)

Cinnamon Lake CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Dayton city (21000) [county subdivision], Montgomery County (113)

Dayton city ANSI County Subdivision Code (COUSUBNS) should be 01086167; it is incorrectly shown as 01086666.

Dayton city (21000) [place], Montgomery County (113)

Dayton city ANSI Place Code (PLACENS) should be 01086167; it is incorrectly shown as 01086666.

Fairport Harbor village (26306), Lake County (085)

Fairport Harbor village ANSI Place Code (PLACENS) should be 01086417; it is incorrectly shown as 02398857.

Hartford village (34202), Licking County (089)

Hartford village ANSI Place Code (PLACENS) should be 01085658; it is incorrectly shown as 02398257.

New Middletown village (55118), Mahoning County (099)

New Middletown village ANSI Place Code (PLACENS) should be 01086567; it is incorrectly shown as 02399476.

River View Local School District (04648) [unified school district], Coshocton (031) and Licking (089) Counties

River View Local School District should also exist in Muskingum County (119). Blocks 1016–1021, 1023, 1024, and 1029 in Census Tract 9110 in Muskingum County should be in River View Local School District; they are incorrectly coded to Amanda-Clearcreek Local School District. The affected area contains 0 population, 0 housing units, a land area of 2,426,940 square meters (0.937 square miles), and a water area of 328,799 square meters (0.127 square miles). The corrected areas for River View Local School District are a land area of 969,114,245 square meters (374.177 square miles) and a water area of 5,289,626 square meters (2.042 square miles).

St Johns CDP (69596), Auglaize County (011)

St Johns CDP name should be St. Johns; it is incorrectly shown as St Johns (missing the period in the abbreviation).

Waverly City city (81942), Pike County (131)

Waverly City city ANSI Place Code (PLACENS) should be 01085666; it is incorrectly shown as 02397230.

February 2012

2010 Census Summary File 2

Geography Note 35

Oklahoma (40)

Census Tract 1 (001000), Block Group 2 (2), Okmulgee County (111)

Census Tract 5 (000500), Block Group 1 (1), Okmulgee County (111) and

Census Tract 1, Block Group 2 should contain blocks that are coded to Census Tract 5, Block Group 1. The following 63 blocks shown in Census Tract 5, Block Group 1 should be recoded to Census Tract 1, Block Group 2:

Census Tract 000500, Blocks 1001–1018, 1020–1031, 1036–1058, 1191–1193, 1195–1201.

The affected area contains 101 population, 51 housing units, a land area of 23,050,275 square meters (8.900 square miles), and a water area of 317,491 square meters (0.122 square miles).

The corrected counts for Census Tract 1 are 3,292 population, 1,373 housing units, a land area of 33,379,448 square meters (12.888 square miles), and a water area of 409,812 square meters (0.158 square miles).

The corrected counts for Census Tract 5 are 3,977 population, 1,666 housing units, a land area of 464,939,518 square meters (179.514 square miles), and a water area of 5,662,734 square meters (2.186 square miles).

Capron town (11750), Woods County (151)

Capron town FIPS Place Class Code (PLACECC) should be C9 and Functional Status (FUNCSTAT) should be I; they are incorrectly shown as C1 and A, respectively.

Liberty CDP (42855), Sequoyah County (135)

Liberty CDP FIPS Place Code (PLACE) should be 42850; it is incorrectly shown as 42855.

Pin Oak Acres CDP (59175), Mayes County (097)

Pin Oak Acres CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

February 2012

2010 Census Summary File 2

Pennsylvania (42)

Beaverdale CDP (04768), Cambria County (021)

Beaverdale CDP ANSI Place Code (PLACENS) should be 02389187; it is incorrectly shown as 01169054.

Bird-in-Hand CDP (06496), Lancaster County (071)

Bird-in-Hand CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Cetronia CDP (12396), Lehigh County (077)

Cetronia CDP FIPS Place Code (PLACE) should be 12424; it is incorrectly shown as 12396.

Fox Chase CDP (27130), Berks County (011)

Fox Chase CDP FIPS Place Class Code (PLACECC) should be U1; it is incorrectly shown as U2.

Grindstone CDP (31592), Fayette County (051)

Grindstone CDP ANSI Place Code (PLACENS) should be 02633231; it is incorrectly shown as 02389885.

Jacksonville CDP (37545), Centre County (027)

Jacksonville CDP FIPS Place Code (PLACE) should be 37544; it is incorrectly shown as 37545.

Lavelle CDP (41904), Schuylkill County (107)

Lavelle CDP ANSI Place Code (PLACENS) should be 02390041; it is incorrectly shown as 02633304.

Leola CDP (42084), Lancaster County (071)

Leola CDP FIPS Place Code (PLACE) should be 42776 and FIPS Place Class Code (PLACECC) should be U1; they are incorrectly shown 42084 and U2, respectively.

Lionville CDP (43747), Chester County (029)

Lionville CDP FIPS Place Code (PLACE) should be 43744 and FIPS Place Class Code (PLACECC) should be U1; they are incorrectly shown 43747 and U2, respectively.

Loyalhanna CDP (45192), Westmoreland County (129)

Loyalhanna CDP ANSI Place Code (PLACENS) should be 02390144; it is incorrectly shown as 02633305.

McConnellstown CDP (46016), Huntingdon County (061)

McConnellstown CDP ANSI Place Code (PLACENS) should be 02630024; it is incorrectly shown as 02630022. The latter code is the correct code for Mapletown CDP (47264).

McKnightstown CDP (46312), Adams County (001)

McKnightstown CDP ANSI Place Code (PLACENS) should be 02630025; it is incorrectly shown as 02630023. The latter code is the correct code for Mather CDP (48064).

Mapletown CDP (47264), Greene County (059)

Mapletown CDP ANSI Place Code (PLACENS) should be 02630022; it is incorrectly shown as 02630024. The latter code is the correct code for McConnellstown CDP (46016).

Mather CDP (48064), Greene County (059)

Mather CDP ANSI Place Code (PLACENS) should be 02630023; it is incorrectly shown as 02630025. The latter code is the correct code for McKnightstown CDP (46312).

New Salem CDP (54040), Fayette County (051)

New Salem CDP ANSI Place Code (PLACENS) should be 02633232; it is incorrectly shown as 02389543.

Riverview Park CDP (65192), Berks County (011)

Riverview Park CDP FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Snydertown CDP (71694), Centre County (027)

Snydertown CDP FIPS Place Code (PLACE) should be 71672; it is incorrectly shown as 71694.

Todd township (76985), Fulton County (057)

Todd township FIPS County Subdivision Code (COUSUB) should be 76984; it is incorrectly shown as 76985.

Woxhall CDP (86576), Montgomery County (091)

Woxhall CDP name should be Woxall; it is incorrectly shown as Woxhall.

Geography Note 39

South Dakota (46)

Anderson township (01460), Perkins County (105)

Anderson township disorganized before January 1, 2010 and should not be shown separately. It should be part of Northeast Perkins UT (45575).

Elm Springs township (19100), Meade County (093)

Elm Springs township ANSI County Subdivision Code (COUSUBNS) should be 02548391; it is incorrectly shown as 01261106.

Flandreau Reservation (1100/21620), Moody County (101)

Flandreau Reservation ANSI American Indian Area/Alaska Native Area/Hawaiian Home Land Code (AIANHHNS) should be 01934365; it is incorrectly shown as 02418935.

Lower Brule UT (39190), Lyman County (085)

Lower Brule UT should include Block 1011 in Census Tract 972600; the block is incorrectly coded to West Lyman UT (70398). The affected area contains 0 population, 0 housing units, a land area of 1,089 square meters (rounds to 0.000 square miles), and a water area of 0 square meters. The corrected land area for Lower Brule UT is 774,417,579 square meters (299.004 square miles).

Northeast Perkins UT township (45575), Perkins County (105)

Northeast Perkins UT should include Anderson township (01460), which disorganized before January 1, 2010. The corrected counts for Northeast Perkins UT are 119 population, 119 housing units, a land area of 789,578,961 square meters (304.858 square miles), and a water area of 26,551,339 square meters (10.252 square miles).

Pahapesto UT (48140), Tripp County (123)

Pahapesto UT ANSI County Subdivision Code (COUSUBNS) should be 02652056; it is incorrectly shown as 01268619.

Ree Heights UT (53980), Hand County (059)

Ree Heights UT ANSI County Subdivision Code (COUSUBNS) should be 02558884; it is incorrectly shown as 01268908.

Rosebud Reservation and Off-Reservation Trust Land (3235/55980), Gregory (053), Lyman (085), Mellette (095), Todd (121), and Tripp (12123) Counties

The tribal subdivisions defined within the Rosebud Reservation and Off-Reservation Trust Land all have boundary errors and should not be used as official 2010 geographies. New corrected versions of the tribal subdivisions will be released in the future. The following is the list of affected tribal subdivisions, the American Indian Tribal Subdivision (Census) (AITSCE) and the American Indian Tribal Subdivision (FIPS) (AITS):

Name	AITSCE	AITS
Antelope Segment	020	01650
Black Pipe Segment	040	05830
Bull Creek Segment	050	08400
Butte Creek Segment	060	09080
Corn Creek Segment	100	13870
Grass Mountain Segment	250	25742
He Dog Segment	270	28030
Horse Creek Segment	280	30040
Ideal Segment	290	31200
Milk's Camp Segment	350	42355
Okreek Segment	400	46655
Parmelee Segment	420	48510
Ring Thunder Segment	500	54950
Rosebud Segment	520	55960
St. Francis Segment	540	57150
Soldier Creek Segment	600	59705
Spring Creek Segment	650	60510
Swift Bear Segment	670	62700
Two Strike Segment	720	64850
Upper Cut Meat Segment	800	65640

West Lyman UT (70398), Lyman County (085)

West Lyman UT should not include Block 1011 in Census Tract 972600; this block should be coded to Lower Brule UT (39190). This change removes all area in Lower Brule Reservation and Off-Reservation Trust Land (2030) from West Lyman UT. The affected area contains 0 population, 0 housing units, a land area of 1,089 square meters (rounds to 0.000 square miles), and a water area of 0 square meters. The corrected land area for West Lyman UT is 1,402,119,639 square meters (541.361 square miles).

Geography Note 46

Wisconsin (55)

Congressional Districts

Wisconsin's congressional district plan, as provided to the Census Bureau, did not provide congressional district assignments for area within parts of the Great Lakes for the 111th Congress. Due to errors in coding, 33 blocks where no congressional district was assigned contained polygons coded as land. The total land area where no congressional district was assigned is 566,304 square meters (0.219 square miles). Four blocks contained one or more housing units and one block contained population in a block not assigned to a congressional district.

Brown County, Census Tract 205.02, Block 2032 (1 housing unit).

Door County, Census Tract 1004, Block 1059 (1 housing unit).

Door County, Census Tract 1009, Block 1038 (1 housing unit and 2 population).

Door County, Census Tract 1009, Block 1040 (2 housing units).

Bristol village (09800), Kenosha County (059)

Bristol village ANSI Place Code (PLACENS) should be 02646685; it is incorrectly shown as 01562217.

Delwood CDP (19600), Adams County (001)

Delwood CDP name should be Dellwood and FIPS Place Class Code (PLACECC) should be U1; they are incorrectly shown as Delwood and U2, respectively.

Poysippi town (64975), Waushara County (137)

Poysippi town name should be Poy Sippi; it is incorrectly shown as Poysippi.

St. Joseph CDP (70815), La Crosse County (063)

St. Joseph CDP FIPS Place Code (PLACE) should be 70800; it is incorrectly shown as 70815.

2010 Census Summary File 2

Geography Note 48

Puerto Rico (72)

State Senate District 6 (006) [State Legislative District (Upper Chamber)], Guayama Municipio (057)

State Senate District 6 in Guayama Municipio was incorrectly defined excluding water area that was coded to ZZZ (State House Districts not defined). Census Tract 2702.01, Blocks 1109 and 1115 should be coded to State Legislative District (Upper Chamber) (SLDLST) 006. The affected area contains 0 population, 0 housing units, and a water area of 12,283 square meters (0.005 square miles).

State House District 13 (013) [State Legislative District (Lower Chamber)], Barceloneta Municipio (017)

State House District 13 in Barceloneta Municipio was incorrectly defined including water area that should be coded to ZZZ (State House Districts not defined). Census Tract 5901, Block 1000 should be coded to State Legislative District (Lower Chamber) (SLDLST) ZZZ. The affected area contains 0 population, 0 housing units, and a water area of 1,502,416 square meters (0.580 square miles).

State House District 15 (015) [State Legislative District (Lower Chamber)], Camuy Municipio (027)

State House District 13 in Camuy Municipio was incorrectly defined including water area that should be coded to ZZZ (State House Districts not defined). Census Tract 3201, Block 1001 should be coded to State Legislative District (Lower Chamber) (SLDLST) ZZZ. The affected area contains 0 population, 0 housing units, and a water area of 234,267 square meters (0.094 square miles).

State House District 30 (030) [State Legislative District (Lower Chamber)], Arroyo Municipio (015)

State House District 30 in Arroyo Municipio was incorrectly defined including water area that should be coded to ZZZ (State House Districts not defined). Census Tract 2802.01, Block 4026 should be coded to State Legislative District (Lower Chamber) (SLDLST) ZZZ. The affected area contains 0 population, 0 housing units, and a water area of 43,344 square meters (0.017 square miles).

State House District 36 (036) [State Legislative District (Lower Chamber)], Culebra Municipio (049)

State House District 360 in Culebra Municipio was incorrectly defined including water area that should be coded to ZZZ (State House Districts not defined). Census Tract 9505, Block 1051 should be coded to State Legislative District (Lower Chamber) (SLDLST) ZZZ. The affected area contains 0 population, 0 housing units, and a water area of 2,004 square meters (0.001 square miles).

Cerillos Hoyos comunidad (17050), Ponce Municipio (113)

Cerillos Hoyos comunidad name should be Cerrillos Hoyos; it is incorrectly shown as Cerillos Hoyos.

Corral Viejo comunidad (21020), Ponce Municipio (113)

Corral Viejo comunidad FIPS Place Code (PLACE) should be 20998; it is incorrectly shown as 21020.

Pueblito del Carmen comunidad (64400), Guayama Municipio (057)

Pueblito del Carmen comunidad FIPS Place Class Code (PLACECC) should be U2; it is incorrectly shown as U1.

Rodríguez Hevia zona urbana (71996), Cidra Municipio (041)

Rodríguez Hevia zona urbana Legal/Statistical Area Description should be comunidad (Rodríguez Hevia comunidad). The Legal/Statistical Area Description Code (LSADC) should be 55; it is incorrectly shown as 62.

INTRODUCTION

This document provides definitions of geographic terms and concepts as well as a description of the different methods used to present information for geographic entities in U.S. Census Bureau data products. This document contains definitions for all geographic area terms and concepts recognized by the Census Bureau and that may appear in any Census Bureau product presenting demographic and housing data (geographic terms and concepts unique to the economic census and other specialized surveys and censuses are not included in this document). **The inclusion of a particular term or concept in this**

document does not imply that data for that geographic entity or attribute appear in each data product. For instance, data for tribal census tracts and tribal block groups will appear only in products providing data according to the American Indian Nation-based geographic hierarchy (see [Figure A-2](#)). As another example, because urban areas are defined on the basis of decennial census population counts, data for urban areas do not appear in initial decennial census data products. In addition, the description of both the hierarchical and inventory approaches to presenting data for geographic entities does not imply that both formats are used in each data product.

GEOGRAPHIC PRESENTATION OF DATA

In Census Bureau data products, geographic entities usually are presented in a hierarchical arrangement or as an inventory listing.

Hierarchical Presentation

A hierarchical geographic presentation shows the geographic entities in a superior/subordinate structure. This structure is derived from the legal, administrative, or area relationships of the entities. The hierarchical structure is depicted in report tables by means of indentation. For computer-readable media, the hierarchy is shown in the descriptive name applied to a summary level, with the hierarchy in order separated by hyphens. An example of hierarchical presentation is the census geographic hierarchy consisting of census block, within block group, within census tract, within place, within county subdivision, within county, within state. Graphically, this is shown as:

State
County
County subdivision
Place (or part)
Census tract (or part)
Block group (or part)
Block

[Figure A-1](#), which is a diagram of the geographic hierarchy, presents this information as a series of nesting relationships. For example, a line joining the lower-level entity place and the higher-level entity state means that a place cannot cross a state boundary; a line linking census tract and county means that a census tract cannot cross a county line; and so forth. There is no implied hierarchy between different line tracks; for example, census tract nests within county, but it may cross a county subdivision boundary even though county subdivision also nests within county.

Inventory Presentation

An inventory presentation of geographic entities is one in which all entities of the same type are shown in alphabetical, code, or geographic sequence, without reference to their hierarchical relationships. Generally, an inventory presentation shows totals for entities that may be split in a hierarchical presentation, such as place, census tract, or block group. An example of a series of inventory presentations is state, followed by all the counties in that state, followed by all the places in that state. Graphically, this is shown as:

State

County A
County B
County C

Place X
Place Y
Place Z

Nation-Based Hierarchies

Exceptions to the standard hierarchical presentation occur for entities that do not necessarily nest within states, most notably American Indian, Alaska Native, and Native Hawaiian areas and core based statistical areas.

American Indian, Alaska Native, and Native Hawaiian Area (AIANNHA) Hierarchy

Because federally recognized American Indian areas can cross state lines, a separate American Indian, Alaska Native, and Native Hawaiian area (AIANNHA) hierarchy exists for these areas. For instance, the following American Indian entities can cross state lines: federally recognized American Indian reservations and/or off-reservation trust lands, tribal subdivisions, tribal designated statistical areas, tribal census tracts, and tribal block groups. National summary data for American Indian reservations or statistical areas may be presented as an alphabetical listing of names followed by the state portions of each area. Also, a tribal census tract or tribal block group may be located in more than one state or county. Data for tribal census tracts and tribal block groups are presented only in Census Bureau products utilizing the AIANNHA hierarchy and are not present in products utilizing the standard census geographic hierarchy.

The diagram in [Figure A-2](#) shows geographic relationships among geographic entities in the AIANNHA hierarchy. It does not show the geographic levels county, county subdivision, and place, among others, because AIANNHAs do not necessarily nest within them.

DEFINITIONS OF GEOGRAPHIC ENTITIES, TERMS, AND CONCEPTS

The definitions below are for geographic entities and concepts that the Census Bureau includes in its standard data products. Not all entities, terms, and concepts are shown in any one data product.

AMERICAN INDIAN, ALASKA NATIVE, AND NATIVE HAWAIIAN AREA

There are both legal and statistical American Indian, Alaska Native, and Native Hawaiian areas (AIANNHAs) for which the Census Bureau provides data. The legal entities consist of federally recognized American Indian reservations and off-reservation trust land areas, the tribal subdivisions that can divide these entities, state-recognized American Indian reservations, Alaska Native regional corporations, and Hawaiian home lands. The statistical entities are Alaska Native village statistical areas, Oklahoma tribal statistical areas, tribal designated statistical areas, and state designated tribal statistical areas. Statistical tribal subdivisions can exist within Oklahoma tribal statistical areas. In all cases, these areas are mutually exclusive in that no AIANNHA can overlap another tribal entity, except for tribal subdivisions, which by definition subdivide some American Indian entities, and Alaska Native village statistical areas, which exist within Alaska Native regional corporations. In cases where more than one tribe claims jurisdiction over an area, the Census Bureau creates a joint-use area as a separate entity to define this area of dual claims. The following provides more detail about each of the various AIANNHAs.

Legal Entities

Alaska Native regional corporations (ANRCs) were created pursuant to the Alaska Native Claims Settlement Act (ANCSA) (Pub. L. 92-203, 85 Stat. 688 [1971]; 43 U.S.C. 1602 et seq. [2000]), enacted in 1971 as a “Regional Corporation” and organized under the laws of the state of Alaska to conduct both the for-profit and non-profit affairs of Alaska Natives within a defined region of Alaska. For the Census Bureau, ANRCs are considered legal geographic entities. Twelve ANRCs cover the entire state of Alaska except for the area within the Annette Island Reserve (a federally recognized American Indian reservation under the governmental authority of the Metlakatla Indian Community). A thirteenth ANRC represents Alaska Natives who do not live in Alaska and do not identify with any of the twelve corporations. The Census Bureau does not provide data for this thirteenth ANRC because it has no defined geographic extent and thus, it does not appear in the TIGER/Line® shapefiles. The Census Bureau offers representatives of the 12 nonprofit ANRCs in Alaska the opportunity to review and update the ANRC boundaries before each decennial census.

Each ANRC is assigned a five-digit numeric Federal Information Processing Series (FIPS) code and an eight-digit National Standard (ANSI) code.

American Indian reservations—Federal (federal AIRs) are areas that have been set aside by the United States for the use of tribes, the exterior boundaries of which are more particularly defined in the final tribal treaties, agreements, executive orders, federal statutes, secretarial orders, or judicial determinations. The Bureau of Indian Affairs maintains a list of all federally recognized tribal governments and makes final determination of the inventory of federal AIRs. The Census Bureau recognizes federal reservations (and associated off-reservation trust lands) as territory over which American Indian tribes have primary governmental authority. American Indian reservations can be legally described as colonies, communities, Indian colonies, Indian communities, Indian rancherias, Indian reservations, Indian villages, pueblos, rancherias, ranches, reservations, reserves, settlements, or villages. The Census Bureau contacts representatives of American Indian tribal governments to identify the boundaries for federal reservations through its annual Boundary and Annexation Survey. Federal reservations may cross state and all other area boundaries.

Each federal AIR is assigned a four-digit census code ranging from 0001 through 4799 in alphabetical order of AIR names nationwide. This nation-based census code is the primary unique identifier for the AIR. Each federal AIR also is assigned a five-digit Federal Information Processing Series (FIPS) code and an eight-digit National Standard (ANSI) code. Because FIPS codes are assigned in alphabetical sequence within each state, the FIPS code will be different in each state for reservations that include territory in more than one state.

American Indian reservations—State (state AIRs) are reservations established by some state governments for tribes recognized by the state. A governor-appointed state liaison provides the names and boundaries for state-recognized American Indian reservations to the Census Bureau. State reservations must be defined within a single state but may cross county and other types of boundaries. Each state AIR is assigned a four-digit census code ranging from 9000 through 9499. Each state AIR also is assigned a five-digit Federal Information Processing Series (FIPS) code and an eight-digit National Standard (ANSI) code. To further identify and differentiate state-recognized American Indian areas from those that are federally recognized, the text "(state)" is appended to the AIR name.

American Indian tribal subdivisions, described as additions, administrative areas, areas, chapters, county districts, communities, districts, or segments, are legal administrative subdivisions of federally recognized American Indian reservations and off-reservation trust lands or are statistical subdivisions of Oklahoma tribal statistical areas (OTSAs). These entities are internal units of self-government or administration that serve social, cultural, and/or economic purposes for the American Indians on the reservations, off-reservation trust lands, or OTSAs. The Census Bureau obtains the boundary and name information for tribal subdivisions from tribal governments. Each American Indian tribal subdivision is assigned a three-digit census code that is alphabetically in order and unique within each American Indian area, a five-digit Federal Information Processing Series (FIPS) code assigned alphabetically within state, and an eight-digit National Standard (ANSI) code. Because FIPS codes are assigned in alphabetical sequence within each state, the FIPS code will be different in each state for tribal subdivisions that include territory in more than one state. All the summary levels that include tribal subdivisions in the presentation hierarchy will only have records for the 24 American Indian areas and two OTSAs that actually have tribal subdivisions. The list of areas and four-digit census codes is:

Code American Indian area

0335	Bois Forte Reservation, MN
0605	Cheyenne River Reservation and Off-Reservation Trust Land, SD
0855	Crow Creek Reservation, SD
0990	Eastern Cherokee Reservation, NC
1110	Flathead Reservation, MT
1150	Fort Belknap Reservation and Off-Reservation Trust Land, MT
1160	Fort Berthold Reservation, ND
1250	Fort Peck Indian Reservation and Off-Reservation Trust Land, MT
1310	Gila River Indian Reservation, AZ
1505	Hopi Reservation and Off-Reservation Trust Land, AZ
1830	Lac Vieux Desert Reservation, MI
1860	Lake Traverse Reservation and Off-Reservation Trust Land, ND-SD
2175	Menominee Reservation, WI
2430	Navajo Nation Reservation and Off-Reservation Trust Land, AZ-NM-UT
2490	Northern Cheyenne Indian Reservation and Off-Reservation Trust Land, MT
2810	Pine Ridge Reservation, SD-NE
3100	Red Lake Reservation, MN
3235	Rosebud Indian Reservation and Off-Reservation Trust Land, SD
3340	Salt River Reservation, AZ
3680	Shakopee Mdewakanton Sioux Community, MN
3935	Spirit Lake Reservation, ND
3970	Standing Rock Reservation, SD-ND
4200	Tohono O'odham Nation Reservation and Off-Reservation Trust Land, AZ
4290	Tulalip Reservation and Off-Reservation Trust Land, WA
5550	Cherokee OTSA, OK
5590	Choctaw OTSA, OK

Hawaiian home lands (HHLs) are areas held in trust for Native Hawaiians by the state of Hawaii, pursuant to the Hawaiian Homes Commission Act of 1920, as amended. The Census Bureau obtains the names and boundaries for HHLs from state officials. The names of the home lands are based on the traditional ahupua'a names of the Crown and government lands of the Kingdom of Hawaii from which the lands were designated or from the local name for an area. Being lands held in trust, HHLs are treated as equivalent to off-reservation trust land areas with the American Indian Trust Land/Hawaiian Home Land Indicator coded as "T." Each HHL is assigned a national four-digit census code ranging from 5000 through 5499 based on the alphabetical sequence of each HHL name, a five-digit Federal Information Processing Series (FIPS) code in alphabetical order within the state of Hawaii, and an eight-digit National Standard (ANSI) code.

Joint-use areas, as applied to any American Indian area by the Census Bureau, means an area that is administered jointly and/or claimed by two or more American Indian tribes. The Census Bureau designates legal joint-use areas as unique geographic entities equivalent to a reservation for the purpose of presenting statistical data. Each is assigned a national four-digit census code ranging from 4800 through 4999 based on the alphabetical sequence of each joint-use area name, a five-digit Federal Information Processing Series (FIPS) code in alphabetical order within state, and an eight-digit National Standard (ANSI) code. No joint-use areas exist in multiple states.

Off-reservation trust lands are areas for which the United States holds title in trust for the benefit of a tribe (tribal trust land) or for an individual American Indian (individual trust land). Trust lands can be alienated or encumbered only by the owner with the approval of the Secretary of the Interior or his/her authorized representative. Trust lands may be located on or off a reservation; however, the Census Bureau tabulates data only for off-reservation trust lands with the off-reservation trust lands always associated with a specific federally recognized reservation and/or tribal government. As for federally recognized reservations, the Census Bureau obtains the boundaries of off-reservation trust lands from American

Indian tribal governments through its annual Boundary and Annexation Survey. The Census Bureau recognizes and tabulates data for reservations and off-reservation trust lands because American Indian tribes have primary governmental authority over these lands. The Census Bureau does not identify fee land (or land in fee simple status) or restricted fee lands as specific geographic areas.

Off-reservation trust lands are assigned a four-digit census code, a five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code that is the same as that for the reservation with which they are associated. Trust lands associated with tribes that do not have a reservation are assigned unique codes. The census code is assigned by tribal name within the range 0001 through 4799, interspersed alphabetically among the reservation names. Because FIPS codes are assigned in alphabetical sequence within each state, the FIPS code will be different in each state for off-reservation trust lands that include territory in more than one state. In decennial census data tabulations, the American Indian Trust Land/Hawaiian Home Land Indicator uniquely identifies off-reservation trust lands, as well as reservation or statistical area only portions, Hawaiian home lands, and records that consist of the combination of reservation and off-reservation trust land territory.

Statistical Entities

Alaska Native village statistical areas (ANVSAs) represent the more densely settled portion of Alaska Native villages (ANVs). The ANVs constitute associations, bands, clans, communities, groups, tribes, or villages recognized pursuant to the Alaska Native Claims Settlement Act of 1971 (Public Law 92-203). Because ANVs do not have boundaries that are easy to locate, the Census Bureau does not delimit ANVs. Instead, the Census Bureau presents statistical data for ANVSAs that represent the settled portion of ANVs. In addition, each ANVSA should include only an area where Alaska Natives, especially members of the defining ANV, represent a substantial proportion of the population during at least one season of the year. ANVSAs are delineated or reviewed by officials of the ANV or, if no ANV official chose to participate in the delineation process, officials of the Alaska Native Regional Corporation (ANRC) in which the ANV is located. An ANVSA may not overlap the boundary of another ANVSA or an American Indian reservation. Each ANVSA is alphabetically assigned a national four-digit census code ranging from 6000 through 7999, an alphabetically assigned state-based five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code.

Oklahoma tribal statistical areas (OTSAs) are statistical entities identified and delineated by the Census Bureau in consultation with federally recognized American Indian tribes that had a former reservation in Oklahoma. The boundary of an OTSA will be that of the former reservation in Oklahoma, except where modified by agreements with neighboring tribes for statistical data presentation purposes. Each OTSA is alphabetically assigned a national four-digit census code ranging from 5500 through 5899, an alphabetically assigned state-based five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code. Tribal subdivisions are allowed within OTSAs and exist for the 2010 Census in the Cherokee and Choctaw OTSAs.

Oklahoma tribal statistical area (OTSA) joint-use areas, as applied to OTSAs by the Census Bureau, means an area that is administered jointly and/or claimed by two or more American Indian tribes that have a delineated OTSA. The Census Bureau designates statistical joint-use areas as unique geographic entities for the purpose of presenting statistical data. Only Oklahoma tribal statistical areas have statistical joint-use areas. Each Oklahoma tribal joint-use area is alphabetically assigned a national four-digit census code ranging from 5900 through 5999, an alphabetically assigned state-based five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code.

State designated tribal statistical areas (SDTSAs—referred to as State Designated American Indian Statistical Areas for Census 2000) are statistical entities for state-recognized American Indian tribes that do not have a state-recognized land base (reservation). SDTSAs are identified and delineated for the Census Bureau by a state liaison identified by the governor's office in each state. SDTSAs generally encompass a compact and contiguous area that contains a concentration of people who identify with a

state-recognized American Indian tribe and in which there is structured or organized tribal activity. An SDTSA may not be located in more than one state and it may not include area within any other American Indian, Alaska Native, or Native Hawaiian area. Each SDTSA is alphabetically assigned a four-digit census code ranging from 9500 through 9998, an alphabetically assigned state-based five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code.

Tribal designated statistical areas (TDSAs) are statistical entities identified and delineated for the Census Bureau by federally recognized American Indian tribes that do not currently have a federally recognized land base (reservation or off-reservation trust land). A TDSA generally encompasses a compact and contiguous area that contains a concentration of individuals who identify with a federally recognized American Indian tribe and in which there is structured or organized tribal activity. A TDSA may be located in more than one state (although none do for 2010), but it may not include area within any other American Indian, Alaska Native, or Native Hawaiian area. Each TDSA is alphabetically assigned a four-digit census code ranging from 8000 through 8999, an alphabetically assigned state-based five-digit Federal Information Processing Series (FIPS) code, and an eight-digit National Standard (ANSI) code.

American Indian, Alaska Native, and Native Hawaiian Area (AIANNHA) Codes—AIANNHAs are represented in Census Bureau products using a national four-character numeric census code field and a single alphabetic character American Indian trust land/Hawaiian home land indicator field. The census codes are assigned in alphabetical order in assigned ranges by AIANNHA type nationwide, except that joint-use areas appear at the end of the code range. Off-reservation trust lands are assigned the same code as the reservation with which they are associated. Trust lands associated with tribes that do not have a reservation are assigned codes based on tribal name. Federal Information Processing Series (FIPS) codes for all AIANNHAs range from 00001 through 89999, without differentiation among the many types of areas.

The type of AIANNHA can be identified either by the census code or by the FIPS class code. The range of census codes allocated to each AIANNHA and the valid FIPS class code(s) associated with each are as follows:

AIANNHA type	Census code range	Valid FIPS class code(s)*
Federal American Indian reservation (AIR)/off-reservation trust land	0001 to 4799	D1, D2, D3, D5, D8
Joint-use federal AIR	4800 to 4999	D0
Hawaiian home land	5000 to 5499	F1
Oklahoma tribal statistical area (OTSA)	5500 to 5899	D6
Joint-use OTSA	5900 to 5999	D0
Alaska Native village statistical area (ANVSA)	6000 to 7999	E1
Tribal designated statistical area (TDSA)	8000 to 8999	D6
State AIR	9000 to 9499	D4
State designated tribal statistical area (SDTSA)	9500 to 9998	D9
AIANNHA type	American Indian, Alaska Native, Native Hawaiian area indicator	
Hawaiian home land	T	
American Indian reservation including associated off-reservation trust land	M	
American Indian reservation or statistical entity only	R	
Off-reservation trust land only	T	

* Refer to the Data Dictionary for specific value descriptions.

AREA MEASUREMENT

Area measurement data provide the size, in square units (metric and nonmetric) of geographic entities for which the Census Bureau tabulates and disseminates data. Area is calculated from the specific boundary recorded for each entity in the Census Bureau's geographic database (see [“MAF/TIGER® Database”](#)). The Census Bureau provides area measurement data for both land area and water area. The water area figures include inland, coastal, Great Lakes, and territorial sea water. Inland water consists of any lake, reservoir, pond, or similar body of water that is recorded in the Census Bureau's geographic database. It also includes any river, creek, canal, stream, or similar feature that is recorded in that database as a two-dimensional feature (rather than as a single line). The portions of the oceans and related large embayments (such as Chesapeake Bay and Puget Sound), the Gulf of Mexico, and the Caribbean Sea that belong to the United States and its territories are classified as coastal and territorial waters; the Great Lakes are treated as a separate water entity. Rivers and bays that empty into these bodies of water are treated as inland water from the point beyond which they are narrower than 1 nautical mile across. Identification of land and inland, coastal, territorial, and Great Lakes waters is for data presentation purposes only and does not necessarily reflect their legal definitions.

Land and water area measurements may disagree with the information displayed on Census Bureau maps and in the MAF/TIGER® database because, for area measurement purposes, hydrologic features identified as intermittent water, glacier, or swamp are reported as land area. The water area measurement reported for some geographic entities includes water that is not included in any lower-level geographic entity. Therefore, because water is contained only in a higher-level geographic entity, summing the water measurements for all the component lower-level geographic entities will not yield the water area of that higher-level entity. This occurs, for example, where water is associated with a county but is not within the legal boundary of any county subdivision. The accuracy of any area measurement data is limited by the accuracy inherent in 1) the location and shape of the various boundary information in the MAF/TIGER® database; 2) the identification, and classification of water bodies coupled with the location and shapes of the shorelines of water bodies in that database; and 3) rounding affecting the last digit in all operations that compute and/or sum the area measurements.

BLOCK

Blocks (Census Blocks) are statistical areas bounded by visible features, such as streets, roads, streams, and railroad tracks, and by nonvisible boundaries, such as selected property lines and city, township, school district, and county limits and short line-of-sight extensions of streets and roads. Generally, census blocks are small in area; for example, a block in a city bounded on all sides by streets. Census blocks in suburban and rural areas may be large, irregular, and bounded by a variety of features, such as roads, streams, and transmission lines. In remote areas, census blocks may encompass hundreds of square miles. Census blocks cover the entire territory of the United States, Puerto Rico, and the Island Areas. Census blocks nest within all other tabulated census geographic entities and are the basis for all tabulated data.

Census Block Numbers—Census blocks are numbered uniquely with a four-digit census block number from 0000 to 9999 within census tract, which nest within state and county. The first digit of the census block number identifies the block group. Block numbers beginning with a zero (in Block Group 0) are only associated with water-only areas.

BLOCK GROUP

Block Groups (BGs) are statistical divisions of census tracts, are generally defined to contain between 600 and 3,000 people, and are used to present data and control block numbering. A block group consists of clusters of blocks within the same census tract that have the same first digit of their four-digit census block number. For example, blocks 3001, 3002, 3003, . . . , 3999 in census tract 1210.02 belong to BG 3 in that census tract. Most BGs were delineated by local participants in the Census Bureau's Participant Statistical Areas Program. The Census Bureau delineated BGs only where a local or tribal government declined to participate, and a regional organization or State Data Center was not available to participate.

A BG usually covers a contiguous area. Each census tract contains at least one BG, and BGs are uniquely numbered within the census tract. Within the standard census geographic hierarchy, BGs never cross state, county, or census tract boundaries but may cross the boundaries of any other geographic entity. Tribal census tracts and tribal BGs are separate and unique geographic areas defined within federally recognized American Indian reservations and can cross state and county boundaries (see [“Tribal Census Tract”](#) and [“Tribal Block Group”](#)). The tribal census tracts and tribal block groups may be completely different from the census tracts and block groups defined by state and county.

Block Group Codes—BGs have a valid code range of 0 through 9. BGs beginning with a zero only contain water area and are generally in coastal and Great Lakes water and territorial seas, but also in larger inland water bodies. For the 2010 Census, a block group 0 for the water portion can be delineated in any census tract and not just those census tracts also defined to only include water area. This is a change from Census 2000, when block groups coded 0 only existed in census tracts with a code of 0. To differentiate between county-based block groups and tribal block groups, the codes for tribal block groups use an alphabetic character (see [“Tribal Block Group”](#)).

BOUNDARY CHANGES

Many of the legal and statistical entities for which the Census Bureau tabulates decennial census data have had boundary changes between Census 2000 and the 2010 Census; that is, between January 1, 2000, and January 1, 2010. Boundary changes to legal entities result from:

1. Annexations to or detachments from legally established governmental units.
2. Mergers or consolidations of two or more governmental units.
3. Establishment of new governmental units.
4. Disincorporations or disorganizations of existing governmental units.
5. Changes in treaties or executive orders and governmental action placing additional lands in trust.
6. Decisions by federal, state, and local courts.
7. Redistricting for congressional districts and state legislative districts.
8. Ancillary changes to legal or statistical areas as a result of annexations and detachments; for example, reduction of territory for a census designated place as the result of an annexation by an adjacent incorporated place.
9. Changes to correct errors or more accurately place boundaries relative to visible features.
10. Changes to statistical areas as the result of concept or criteria changes.

All legal boundaries used for the 2010 Census are those reported to the Census Bureau to be in effect as of January 1, 2010. The statistical area boundaries also reflect a January 1, 2010, date for delineation. The legal boundaries are collected through various surveys and programs: the Boundary and Annexation Survey, Redistricting Data Program, and the School District Review Program. There is a Geographic Change User Note Indicator in data files that identifies entities for which there have been changes to boundaries or data attributes (for example, legal/statistical area description or code) between the two censuses.

Statistical entity boundaries generally are reviewed by local, state, or tribal governments and can have changes to adjust boundaries to visible features to better define the geographic area each encompasses or to account for shifts and changes in the population distribution within an area. Where statistical areas have a relationship to legal area boundaries, complementary updates occur; for example, removing territory from a census designated place if annexed to an incorporated place or contracting a tribal designated statistical area if the area is added to an American Indian reservation.

The historical counts shown for states, counties, county subdivisions, places, American Indian, Alaska Native, and Native Hawaiian areas, and other areas are not updated for boundary changes and thus, reflect the population and housing units in each entity as delineated at the time of each decennial census.

CENSUS DIVISION

Census Divisions are groupings of states and the District of Columbia that are subdivisions of the four census regions (see “Census Region”). There are nine census divisions, and each is identified by a single-digit census code. Puerto Rico and the Island Areas are not part of any census region or census division. For a list of all census regions, census divisions, and their constituent states, see [Figure A-3](#).

CENSUS REGION

Census Regions are groupings of states and the District of Columbia that subdivide the United States for the presentation of census data. There are four census regions—Northeast, Midwest, South, and West. Each of the four census regions is divided into two or more census divisions (see “Census Division”). Each census region is identified by a single-digit census code. Puerto Rico and the Island Areas are not part of any census region or census division. For a list of all census regions, census divisions, and their constituent states, see [Figure A-3](#).

CENSUS TRACT

Census Tracts are small, relatively permanent statistical subdivisions of a county or equivalent entity that are updated by local participants prior to each decennial census as part of the Census Bureau’s Participant Statistical Areas Program. The Census Bureau delineates census tracts in situations where no local participant existed or where state, local, or tribal governments declined to participate. The primary purpose of census tracts is to provide a stable set of geographic units for the presentation of statistical data.

Census tracts generally have a population size between 1,200 and 8,000 people, with an optimum size of 4,000 people. A census tract usually covers a contiguous area; however, the spatial size of census tracts varies widely depending on the density of settlement. Census tract boundaries are delineated with the intention of being maintained over a long time so that statistical comparisons can be made from census to census. Census tracts occasionally are split due to population growth or merged as a result of substantial population decline.

Census tract boundaries generally follow visible and identifiable features. They may follow nonvisible legal boundaries, such as minor civil division (MCD) or incorporated place boundaries in some states and situations, to allow for census-tract-to-governmental-unit relationships where the governmental boundaries tend to remain unchanged between censuses. State and county boundaries always are census tract boundaries in the standard census geographic hierarchy. Tribal census tracts are a unique geographic entity defined within federally recognized American Indian reservations and off-reservation trust lands and can cross state and county boundaries. Tribal census tracts may be completely different from the census tracts and block groups defined by state and county (see “[Tribal Census Tract](#)”).

Census Tract Codes and Numbers—Census tracts are identified by an up to four-digit integer number and may have an optional two-digit suffix; for example 1457.02 or 23. The census tract codes consist of six digits with an implied decimal between the fourth and fifth digit corresponding to the basic census tract number but with leading zeroes and trailing zeroes for census tracts without a suffix. The tract number examples above would have codes of 145702 and 002300, respectively.

Some ranges of census tract numbers in the 2010 Census are used to identify distinctive types of census tracts. The code range in the 9400s is used for those census tracts with a majority of population, housing, or land area associated with an American Indian area and matches the numbering used in Census 2000. The code range in the 9800s is new for 2010 and is used to specifically identify special land-use census tracts; that is, census tracts defined to encompass a large area with little or no residential population with special characteristics, such as large parks or employment areas. The range of census tracts in the

9900s represents census tracts delineated specifically to cover large bodies of water. This is different from Census 2000 when water-only census tracts were assigned codes of all zeroes (000000); 000000 is no longer used as a census tract code for the 2010 Census.

The Census Bureau uses suffixes to help identify census tract changes for comparison purposes. Census tract suffixes may range from .01 to .98. As part of local review of existing census tracts before each census, some census tracts may have grown enough in population size to qualify as more than one census tract. When a census tract is split, the split parts usually retain the basic number but receive different suffixes. For example, if census tract 14 is split, the new tract numbers would be 14.01 and 14.02. In a few counties, local participants request major changes to, and renumbering of, the census tracts; however, this is generally discouraged. Changes to individual census tract boundaries usually do not result in census tract numbering changes.

Tribal Census Tracts in American Indian Areas—The Census Bureau introduced the concept of tribal census tracts for the first time for Census 2000. Tribal census tracts for that census consisted of the standard county-based census tracts tabulated within American Indian areas, thus allowing for the tracts to ignore state and county boundaries for tabulation. The Census Bureau assigned the 9400 range of numbers to identify specific tribal census tracts; however, not all tribal census tracts used this numbering scheme. For the 2010 Census, tribal census tracts no longer are tied to or numbered in the same way as the county-based census tracts (see [“Tribal Census Tract”](#)).

CODES FOR GEOGRAPHIC ENTITIES

The Census Bureau and other federal agencies assign codes to geographic entities to facilitate the organization, presentation, and exchange of statistical data and other information. Geographic entity codes allow for the unambiguous identification of individual entities, generally within a specific, higher-level geographic entity (for example, county codes are assigned uniquely within each state). For geographic entities that have names (such as states, counties, places, county subdivisions, urban areas, and metropolitan and micropolitan statistical areas), codes generally are assigned alphabetically based on name.

Census Bureau data products contain several types of geographic entity codes: Federal Information Processing Series (FIPS), American National Standards Institute (ANSI), and Census Bureau codes.

Federal Information Processing Series (FIPS)—These are codes formerly known as Federal Information Processing Standards codes, until the National Institute of Standards and Technology (NIST) announced its decision in 2005 to remove geographic entity codes from its oversight. The Census Bureau continues to maintain and issue codes for geographic entities covered under FIPS oversight, albeit with a revised meaning for the FIPS acronym. Geographic entities covered under FIPS include states, counties, congressional districts, core based statistical areas, places, county subdivisions, subminor civil divisions, consolidated cities, and all types of American Indian, Alaska Native, and Native Hawaiian areas. FIPS codes are assigned alphabetically according to the name of the geographic entity and may change to maintain alphabetic sort when new entities are created or names change. FIPS codes for specific geographic entity types are usually unique within the next highest level of geographic entity with which a nesting relationship exists. For example, FIPS state, congressional district, and core based statistical area codes are unique within nation; FIPS county, place, county subdivision, and subminor civil division codes are unique within state. The codes for American Indian, Alaska Native, and Native Hawaiian areas also are unique within state; those areas in multiple states will have different codes for each state.

American National Standards Institute (ANSI)—With the removal of geographic entities from Federal Information Processing Standards oversight, the Census Bureau and other federal agencies have sought American National Standards Institute (ANSI) oversight authority for geographic entity codes. These codes are referred to as “National Standard” codes in some Census Bureau products. Geographic entities covered under ANSI include states, counties, congressional districts, core based statistical areas and related statistical areas, places, county subdivisions, consolidated cities, subminor civil divisions, and all types of American Indian, Alaska Native, and Native Hawaiian areas—Alaska Native regional corporations, Alaska

Native village statistical areas, American Indian reservation and off-reservation trust lands, American Indian tribal subdivisions, Hawaiian home lands, Oklahoma tribal statistical areas, state designated tribal statistical areas, and tribal designated statistical areas.

Relationship between FIPS and ANSI codes—Geographic entities for which NIST formerly provided Federal Information Processing Standards oversight will continue to be referred to as FIPS (Federal Information Processing Series) codes in some Census Bureau data products, despite the Census Bureau having sought ANSI oversight authority. These geographic entities include states, counties, congressional districts, and core based statistical areas and related statistical areas. The Census Bureau continues to maintain and issue codes for these entities following the same structure and without change to existing codes, except when necessary to maintain alphabetic sorting based on names of entities. The Census Bureau also continues to maintain and issue five-digit FIPS codes (formerly FIPS 55) for places, county subdivisions, consolidated cities, subminor civil divisions, Alaska Native Regional Corporations, and all types of American Indian, Alaska Native, and Native Hawaiian areas but is not seeking ANSI oversight authority for these entity codes. The U.S. Geological Survey has ANSI oversight authority for its Geographic Names Information System identifier (GNIS ID), which has been adopted as a National Standard (NS) code for states, counties, places, county subdivisions, subminor civil divisions, consolidated cities, Alaska Native Regional Corporations, and all types of American Indian, Alaska Native, and Native Hawaiian areas. The Census Bureau will include the GNIS ID for these entities in its data products, portrayed as an eight-digit character numeric code and identified as “ANSI.” NS codes (GNIS IDs) will not sort geographic entities in alphabetical order based on name or title, as is the case with FIPS codes.

Census Bureau codes—The Census Bureau assigns and issues codes for a number of geographic entities for which FIPS or ANSI codes are not available, and sometimes in addition to FIPS and ANSI codes. Geographic entities for which census codes are assigned and issued in Census Bureau data products include regions, divisions, census tracts, block groups, census blocks, urban areas, and all types of American Indian, Alaska Native, and Native Hawaiian areas. Some codes—voting district, state legislative district, and school district—use standards established by the states—or for school districts, the U.S. Department of Education.

CONGRESSIONAL DISTRICT

Congressional Districts are the 435 areas from which people are elected to the U.S. House of Representatives. After the apportionment of congressional seats among the states based on decennial census population counts, each state with multiple seats is responsible for establishing congressional districts for the purpose of electing representatives. Each congressional district is to be as equal in population to all other congressional districts in a state as practicable. For the District of Columbia, Puerto Rico, and each Island Area, a separate code is used to identify the entire areas of these state-equivalent entities as having a single nonvoting delegate.

Congressional District Codes—Congressional districts are identified by a two-character numeric Federal Information Processing Series (FIPS) code numbered uniquely within state. The District of Columbia, Puerto Rico, and the Island Areas have code 98 assigned identifying their nonvoting delegate status with respect to representation in Congress:

- 01 to 53—Congressional district codes
- 00—At large (single district for state)
- 98—Nonvoting delegate

CONSOLIDATED CITY

Consolidated City—A consolidated government is a unit of local government for which the functions of an incorporated place and its county or minor civil division (MCD) have merged. This action results in both the primary incorporated place and the county or MCD continuing to exist as legal entities, even though the county or MCD performs few or no governmental functions and has few or no elected officials.

Where this occurs—and where one or more other incorporated places in the county or MCD continue to function as separate governments, even though they have been included in the consolidated government—the primary incorporated place is referred to as a consolidated city. The Census Bureau classifies the separately incorporated places within the consolidated city as place entities and creates a separate place (balance) record for the portion of the consolidated city not within any other place.

Consolidated City (Balance) Portions refer to the areas of a consolidated city not included in another separately incorporated place. For example, Butte-Silver Bow, MT, is a consolidated city (former Butte city and Silver Bow County) that includes the separately incorporated municipality of Walkerville city. The area of the consolidated city that is not in Walkerville city is assigned to Butte-Silver Bow (balance). The name always includes the “(balance)” identifier (see [“Place”](#)).

CORE BASED STATISTICAL AREAS AND RELATED STATISTICAL AREAS

Core Based Statistical Areas (CBSAs) consist of the county or counties or equivalent entities associated with at least one core (urbanized area or urban cluster) of at least 10,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties with the counties associated with the core. The general concept of a CBSA is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. The term “core based statistical area” became effective in 2003 and refers collectively to metropolitan statistical areas and micropolitan statistical areas. The U.S. Office of Management and Budget (OMB) defines CBSAs to provide a nationally consistent set of geographic entities for the United States and Puerto Rico for use in tabulating and presenting statistical data. Current CBSAs are based on application of the 2000 standards (published in the *Federal Register* of December 27, 2000) with Census 2000 data. The first set of areas defined based on the 2000 standards were announced on June 6, 2003; subsequent updates have been made to the universe of CBSAs and related statistical areas. No CBSAs are defined in the Island Areas. Statistical areas related to CBSAs include metropolitan divisions, combined statistical areas (CSAs), New England city and town areas (NECTAs), NECTA divisions, and combined NECTAs.

Combined New England City and Town Areas (Combined NECTAs) consist of two or more adjacent New England city and town areas (NECTAs) that have substantial employment interchange. The NECTAs that combine to create a combined NECTA retain separate identities within the larger combined NECTA. Because combined NECTAs represent groupings of NECTAs, they should not be ranked or compared with individual NECTAs.

Combined Statistical Areas (CSAs) consist of two or more adjacent CBSAs that have substantial employment interchange. The CBSAs that combine to create a CSA retain separate identities within the larger CSA. Because CSAs represent groupings of metropolitan and/or micropolitan statistical areas, they should not be ranked or compared with individual metropolitan and micropolitan statistical areas.

Metropolitan Divisions are smaller groupings of counties or equivalent entities defined within a metropolitan statistical area containing a single core with a population of at least 2.5 million. Not all metropolitan statistical areas with urbanized areas of this size will contain metropolitan divisions. A metropolitan division consists of one or more main/secondary counties that represent an employment center or centers, plus adjacent counties associated with the main/secondary county or counties through commuting ties. Because metropolitan divisions represent subdivisions of larger metropolitan statistical areas, it is not appropriate to rank or compare metropolitan divisions with metropolitan and micropolitan statistical areas. It would be appropriate to rank and compare metropolitan divisions.

Metropolitan Statistical Areas are CBSAs associated with at least one urbanized area that has a population of at least 50,000. The metropolitan statistical area comprises the central county or counties or equivalent entities containing the core, plus adjacent outlying counties having a high degree of social and economic integration with the central county or counties as measured through commuting.

Micropolitan Statistical Areas are CBSAs associated with at least one urban cluster that has a population of at least 10,000 but less than 50,000. The micropolitan statistical area comprises the central county or counties or equivalent entities containing the core, plus adjacent outlying counties having a high degree of social and economic integration with the central county or counties as measured through commuting.

New England City and Town Areas (NECTAs) are an alternative set of geographic entities, similar in concept to the county-based CBSAs defined nationwide, that OMB defines in New England based on county subdivisions—usually cities and towns. NECTAs are defined using the same criteria as county-based CBSAs, and, similar to CBSAs, NECTAs are categorized as metropolitan or micropolitan.

New England City and Town Area (NECTA) Divisions are smaller groupings of cities and towns defined within a NECTA containing a single core with a population of at least 2.5 million. A NECTA division consists of a main city or town that represents an employment center, plus adjacent cities and towns associated with the main city or town through commuting ties. Each NECTA division must contain a total population of 100,000 or more. Because NECTA divisions represent subdivisions of larger NECTAs, it is not appropriate to rank or compare NECTA divisions with NECTAs. It would be appropriate to rank and compare NECTA divisions.

Principal Cities of a CBSA (or NECTA) include the largest incorporated place with a population of at least 10,000 in the CBSA, or if no incorporated place of at least 10,000 population is present in the CBSA, the largest incorporated place or census designated place (CDP) in the CBSA. Principal cities also include any additional incorporated place or CDP with a population of at least 250,000 or in which 100,000 or more persons work; any additional incorporated place or CDP with a population of at least 50,000 and in which the number of jobs meets or exceeds the number of employed residents; and any additional incorporated place or CDP with a population of at least 10,000 but less than 50,000 and at least one-third the population size of the largest place and in which the number of jobs meets or exceeds the number of employed residents. Note that there are some places designated as principal cities of NECTAs that are not principal cities of a CBSA.

Core Based Statistical Area Codes—Metropolitan statistical areas, micropolitan statistical areas, NECTAs, metropolitan divisions, and NECTA divisions are identified using a five-digit numeric code that is assigned alphabetically based on title and is unique within the nation. The combined statistical area and combined NECTAs are identified using a three-digit numeric code, also assigned alphabetically based on title and unique within the nation. Codes, length, and ranges are:

CBSA entity	Length	Range*
Metropolitan statistical area	Five digits	10000–49999
Micropolitan statistical area	Five digits	10000–49999
Metropolitan division	Five digits	10004–49994
New England city and town area (NECTA)	Five digits	70000–79999
NECTA division	Five digits	70004–79994
Combined statistical area	Three digits	100–599
Combined NECTA	Three digits	700–799

* Metropolitan divisions and NECTA divisions are distinguished from metropolitan and micropolitan statistical areas and NECTAs by codes that end in “4.” Metropolitan and micropolitan statistical areas and NECTAs cannot end in “4.”

COUNTY OR STATISTICALLY EQUIVALENT ENTITY

The primary legal divisions of most states are termed counties. In Louisiana, these divisions are known as parishes. In Alaska, which has no counties, the equivalent entities are the organized boroughs, city and boroughs, municipalities, and census areas; the latter of which are delineated cooperatively for statistical purposes by the state of Alaska and the Census Bureau. In four states (Maryland, Missouri, Nevada, and Virginia), there are one or more incorporated places that are independent of any county organization and

thus constitute primary divisions of their states. These incorporated places are known as independent cities and are treated as equivalent entities for purposes of data presentation. The District of Columbia and Guam have no primary divisions, and each area is considered an equivalent entity for purposes of data presentation. All of the counties in Connecticut and Rhode Island and nine counties in Massachusetts were dissolved as functioning governmental entities; however, the Census Bureau continues to present data for these historical entities in order to provide comparable geographic units at the county level of the geographic hierarchy for these states and represents them as nonfunctioning legal entities in data products. The Census Bureau treats the following entities as equivalents of counties for purposes of data presentation: municipios in Puerto Rico, districts and islands in American Samoa, municipalities in the Commonwealth of the Northern Mariana Islands, and islands in the U.S. Virgin Islands. Each county or statistically equivalent entity is assigned a three-character numeric Federal Information Processing Series (FIPS) code based on alphabetical sequence that is unique within state and an eight-digit National Standard feature identifier.

COUNTY SUBDIVISION

County Subdivisions are the primary divisions of counties and equivalent entities. They include census county divisions, census subareas, minor civil divisions, and unorganized territories and can be classified as either legal or statistical. Each county subdivision is assigned a five-character numeric Federal Information Processing Series (FIPS) code based on alphabetical sequence within state and an eight-digit National Standard feature identifier.

Legal Entities

Minor civil divisions (MCDs) are the primary governmental or administrative divisions of a county in many states (parishes in Louisiana) and the county equivalents in Puerto Rico and the Island Areas. MCDs in the United States, Puerto Rico, and the Island Areas represent many different kinds of legal entities with a wide variety of governmental and/or administrative functions. MCDs include areas variously designated as barrios, barrios-pueblo, boroughs, charter townships, commissioner districts, election districts, election precincts, gores, grants, locations, magisterial districts, parish governing authority districts, plantations, purchases, reservations, supervisor's districts, towns, and townships. The Census Bureau recognizes MCDs in 29 states, Puerto Rico, and the Island Areas. The District of Columbia has no primary divisions and is considered equivalent to an MCD for statistical purposes. (It is also considered a state equivalent and a county equivalent.) The 29* states in which MCDs are recognized are:

Arkansas	Michigan	Ohio
Connecticut	Minnesota	Pennsylvania
Illinois	Mississippi	Rhode Island
Indiana	Missouri	South Dakota
Iowa	Nebraska	Tennessee
Kansas	New Hampshire	Vermont
Louisiana	New Jersey	Virginia
Maine	New York	West Virginia
Maryland	North Carolina	Wisconsin
Massachusetts	North Dakota	

* Tennessee, a state with statistical census county divisions (CCDs) in 2000, reverted to MCDs in 2008.

In some states, all or some incorporated places are not part of any MCD; these places are termed independent places. Independent places also serve as primary legal subdivisions and have a Federal Information Processing Series (FIPS) county subdivision code and National Standard (ANSI) code that is the same as the FIPS and ANSI place code. In nine states—Maine, Massachusetts, New Hampshire, New Jersey, North Dakota, Pennsylvania, Rhode Island, South Dakota, and Wisconsin—all incorporated places are independent places. In other states, incorporated places are part of, or dependent within, the MCDs in which they are located, or the pattern is mixed—some incorporated places are independent of MCDs and others are included within one or more MCDs.

The MCDs in 12 states (Connecticut, Maine, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Wisconsin) also serve as general-purpose local governments that can perform the same governmental functions as incorporated places. The Census Bureau presents data for these MCDs in all data products for which place data are provided.

In New York and Maine, American Indian reservations (AIRs) generally exist outside the jurisdiction of any town (MCD) and thus also serve as the equivalent of MCDs for purposes of data presentation.

In states with MCDs, the Census Bureau assigns a default FIPS county subdivision code of 00000 and ANSI code of eight zeroes in some coastal, territorial sea, and Great Lakes water where county subdivisions do not legally extend into the Great Lakes or out to the 3-mile limit.

Statistical Entities

Census county divisions (CCDs) are areas delineated by the Census Bureau in cooperation with state, tribal, and local officials for statistical purposes. CCDs have no legal function and are not governmental units. CCD boundaries usually follow visible features and usually coincide with census tract boundaries. The name of each CCD is based on a place, county, or well-known local name that identifies its location. CCDs exist where:

1. There are no legally established MCDs.
2. The legally established MCDs do not have governmental or administrative purposes.
3. The boundaries of the MCDs change frequently.
4. The MCDs are not generally known to the public.

CCDs exist within the following 20* states:

Alabama	Hawaii	Oregon
Arizona	Idaho	South Carolina
California	Kentucky	Texas
Colorado	Montana	Utah
Delaware	Nevada	Washington
Florida	New Mexico	Wyoming
Georgia	Oklahoma	

* Tennessee, a CCD state in 2000, reverted to a MCD state in 2008.

Census subareas are statistical subdivisions of boroughs, city and boroughs, municipalities, and census areas, all of which are statistical equivalent entities for counties in Alaska. The state of Alaska and the Census Bureau cooperatively delineate the census subareas to serve as the statistical equivalents of MCDs.

Unorganized territories (UTs) are defined by the Census Bureau in nine MCD states where portions of counties or equivalent entities are not included in any legally established MCD or incorporated place. The Census Bureau recognizes such separate pieces of territory as one or more separate county subdivisions for census purposes. It assigns each unorganized territory a descriptive name, followed by the designation "UT" and a county subdivision FIPS and ANSI code. The following states have unorganized territories:

Arkansas	Maine	North Carolina
Indiana	Minnesota	North Dakota
Iowa	New York	South Dakota

GEOGRAPHIC AREA ATTRIBUTES

The Census Bureau collects and maintains information describing selected attributes and characteristics of geographic areas. These attributes are Federal Information Processing Series (FIPS) class code, functional status, legal/statistical area description, internal point, and name of geographic entities.

FIPS class codes describe the general characteristics of a geographic area related to its legal or statistical status, governmental status, and in some cases relationship to other geographic entities. Class codes exist for counties; county subdivisions; subminor civil divisions; places; consolidated cities; Alaska Native Regional Corporations; American Indian, Alaska Native, and Native Hawaiian areas; and American Indian tribal subdivisions.

Functional status describes whether a geographic entity is a functioning governmental unit, has an inactive government, is an administrative area without a functioning government, or is a statistical area identified and defined solely for tabulation and presentation of statistical data. Functional status codes are:

- A Active government providing primary general-purpose functions.
- B Active government that is partially consolidated with another government but with separate officials providing primary general-purpose functions.
- C Active government consolidated with another government with a single set of officials.
- E Active government providing special-purpose functions.
- F Fictitious entity created to fill the Census Bureau's geographic hierarchy.
- G Active government that is subordinate to another unit of government and thus, not considered a functioning government.
- I Inactive governmental unit that has the power to provide primary special-purpose functions.
- N Nonfunctioning legal entity.
- S Statistical entity.

Internal point—The Census Bureau calculates an internal point (latitude and longitude coordinates) for each geographic entity. For many geographic entities, the internal point is at or near the geographic center of the entity. For some irregularly shaped entities (such as those shaped like a crescent), the calculated geographic center may be located outside the boundaries of the entity. In such instances, the internal point is identified as a point inside the entity boundaries nearest to the calculated geographic center and, if possible, within a land polygon.

Legal/statistical area description (LSAD)—The LSAD describes the particular typology for each geographic entity; that is, whether the entity is a borough, city, county, town, or township, among others. For legal entities, the LSAD reflects the term that appears in legal documentation pertaining to the entity, such as a treaty, charter, legislation, resolution, or ordinance. For statistical entities, the LSAD is the term assigned by the Census Bureau or other agency defining the entity. The LSAD code is a two-character field that corresponds to a description of the legal or statistical type of entity and identifies whether the LSAD term should be capitalized and should precede or follow the name of the geographic entity. Note that the same LSAD code is assigned to entities at different levels of the geographic hierarchy when they share the same LSAD. For example, the Census Bureau assigns the same LSAD code ("21") to boroughs in New York and Connecticut, although they are county subdivisions in the former and incorporated places in the latter.

Name—Each geographic entity included in Census Bureau products has a name. For most geographic entities, the name is derived from the official legally recognized name, is assigned by local officials participating in Census Bureau statistical area programs, or is based on component entities and determined according to specified criteria. For legal entities, the name appearing in Census Bureau products may be the more commonly used name rather than the name as it appears in legal documents. For example, "Virginia" instead of "the Commonwealth of Virginia"; "Baltimore" instead of "City of Baltimore." In some instances, the name for an entity in Census Bureau products will reflect the official name as well as a more commonly used name listed parenthetically; i.e., San Buenaventura (Ventura), CA, or Bath (Berkeley Springs), WV. For some types of geographic entities, the name reflected in Census Bureau products may be the geographic entity code assigned by local officials. For example, a census tract's name

is the actual number assigned by local officials, such as 1.01, whereas the census tract code would reflect a full four-digit base code and two-digit suffix (for example, for the preceding tract named 1.01, 000101).

GEOGRAPHIC NAMES INFORMATION SYSTEM

The Geographic Names Information System (GNIS) is the federal standard for geographic nomenclature. The U.S. Geological Survey (USGS) developed the GNIS for the U.S. Board on Geographic Names as the official repository of domestic geographic names data; the official vehicle for geographic names use by all departments of the federal government; and the source for applying geographic names to federal electronic and printed products. The GNIS contains information about physical and cultural geographic features of all types in the United States and its territories, current and historical, but not including roads and highways. The database holds the federally recognized name of each feature and defines the feature location by state, county, USGS topographic map, and geographic coordinates. Other attributes include names or spellings other than the official name, feature designations, feature classification, historical and descriptive information, and, for some categories, the geometric boundaries.

GEOGRAPHIC NAMES INFORMATION SYSTEM IDENTIFIER

The Geographic Names Information System Identifier (GNIS ID) is a variable length, permanent, numeric identifier of up to ten digits in length that identifies each entity uniquely within the nation. The GNIS is the new American National Standards Institute (ANSI) national standard code for several entity types. Because each entity's GNIS ID is permanent, it will not change if the entity changes its name or if creation of a new entity changes the alphabetic sort. (Federal Information Processing Series codes are assigned based on the alphabetic sorting of entity names within a state and occasionally require changing codes to maintain the alphabetic sort.) The GNIS IDs are assigned sequentially and stored in a right-justified, variable-length, numeric field without leading zeroes. The GNIS now contains more than 2.6 million sequential records, thus no GNIS ID currently exceeds seven digits. The Census Bureau portrays the GNIS ID in its data products as a fixed-width eight-character field with leading zeroes.

ISLAND AREAS OF THE UNITED STATES

The Island Areas of the United States are American Samoa, Guam, the Commonwealth of the Northern Mariana Islands (Northern Mariana Islands), and the U.S. Virgin Islands.

The U.S. Census Bureau treats the Island Areas as entities that are statistically equivalent to states for data presentation purposes; data for the Island Areas, however, are presented separately from data for the United States and Puerto Rico. Geographic definitions specific to the Island Areas are shown in the appropriate publications and documentation that accompany the data products for the Island Areas. Sometimes the Island Areas are referred to as "Island Territories" or "Insular Areas." For the 1990 and previous censuses, the Census Bureau referred to the entities as "Outlying Areas."

Separate from the Island Areas is the term "U.S. Minor Outlying Islands." The U.S. Minor Outlying Islands refers to certain small islands under U.S. jurisdiction in the Caribbean and Pacific: Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Midway Islands, Navassa Island, Palmyra Atoll, and Wake Island. These areas usually are not part of standard data products.

MAF/TIGER® DATABASE

MAF/TIGER is an acronym for the Master Address File/Topologically Integrated Geographic Encoding and Referencing system or database. It is a digital (computer-readable) geographic database that automates the mapping and related geographic activities required to support the Census Bureau's census and survey programs. The Census Bureau developed the TIGER® system to automate the geographic support processes needed to meet the major geographic needs of the 1990 Census: producing cartographic products to support data collection and map presentations, providing geographic structure for tabulation and dissemination of the collected statistical data, assigning residential and employer addresses to

the correct geographic location and relating those locations to the geographic entities used for data tabulation, and so forth. During the 1990s, the Census Bureau developed an independent Master Address File (MAF) to support field operations and allocation of housing units for tabulations. After Census 2000, both the address-based MAF and geographic TIGER® databases merged to form MAF/TIGER. The content of the MAF/TIGER database is undergoing continuous updates and is made available to the public through a variety of TIGER/Line® shapefiles.

PLACE

Incorporated Places are those reported to the Census Bureau as legally in existence as of January 1, 2010, as reported in the latest Boundary and Annexation Survey (BAS), under the laws of their respective states. An incorporated place is established to provide governmental functions for a concentration of people as opposed to a minor civil division, which generally is created to provide services or administer an area without regard, necessarily, to population. Places always are within a single state or equivalent entity, but may extend across county and county subdivision boundaries. An incorporated place usually is a city, town, village, or borough, but can have other legal descriptions. For Census Bureau data tabulation and presentation purposes, incorporated places exclude:

- Boroughs in Alaska (treated as statistical equivalents of counties)
- Towns in the New England states, New York, and Wisconsin (treated as MCDs)
- Boroughs in New York (treated as MCDs)

Census Designated Places (CDPs) are the statistical counterparts of incorporated places and are delineated to provide data for settled concentrations of population that are identifiable by name but are not legally incorporated under the laws of the state in which they are located. The boundaries usually are defined in cooperation with local or tribal officials and generally updated prior to each decennial census. These boundaries, which usually coincide with visible features or the boundary of an adjacent incorporated place or another legal entity boundary, have no legal status, nor do these places have officials elected to serve traditional municipal functions. CDP boundaries may change from one decennial census to the next with changes in the settlement pattern; a CDP with the same name as in an earlier census does not necessarily have the same boundary. CDPs must be contained within a single state and may not extend into an incorporated place. There are no population size requirements for CDPs.

Hawaii is the only state that has no incorporated places recognized by the Census Bureau. All places shown in decennial census data products for Hawaii are CDPs. By agreement with the state of Hawaii, the Census Bureau does not show data separately for the city of Honolulu, which is coextensive with Honolulu County. In Puerto Rico, which also does not have incorporated places, the Census Bureau recognizes only CDPs and refers to them as comunidades or zonas urbanas. Guam also has only CDPs.

Place Codes are of two types. The five-digit Federal Information Processing Series (FIPS) place code is assigned based on alphabetical sequence within a state. If place names are duplicated within a state and they represent distinctly different areas, a separate code is assigned to each place name alphabetically by the primary county in which each place is located, or if both places are in the same county, they are assigned alphabetically by their legal descriptions (for example, “city” before “village”). Places also are assigned an eight-digit National Standard (ANSI) code.

Dependent and Independent Places refers to the relationship of places to the county subdivisions. Depending on the state, incorporated places are either dependent within, or independent of, county subdivisions, or there is a mixture of dependent and independent places in the state and in a county. Dependent places are part of the county subdivision; the county subdivision code of the place is the same as that of the underlying county subdivision(s) but is different from the place code. Independent places are not part of any minor civil division (MCD) and serve as primary county subdivisions. The independent place FIPS code usually is the same as that used for the MCD for the place. The only exception is if the place is independent of the MCDs in a state (Iowa, Louisiana, Maryland, Nebraska, North Carolina, and Virginia)

in which the FIPS MCD codes are in the 90000 range. Then, the FIPS MCD and FIPS place codes will differ. CDPs always are dependent within county subdivisions and all places are dependent within statistical county subdivisions.

Consolidated City (Balance) Portions refer to the areas of a consolidated city not included in another separately incorporated place. For example, Butte-Silver Bow, MT, is a consolidated city (former Butte city and Silver Bow County) that includes the separately incorporated municipality of Walkerville city. The area of the consolidated city that is not in Walkerville city is assigned to Butte-Silver Bow (balance). The name of the area of a consolidated city not specifically within a separately incorporated place always includes the “(balance)” identifier. Balance portions of consolidated cities are included with other places in Census Bureau products.

POPULATION AND HOUSING UNIT DENSITY

Population and housing unit density are computed by dividing the total population or number of housing units within a geographic entity by the land area of that entity measured in square miles or in square kilometers. Density is expressed as “population per square mile (kilometer)” or “housing units per square mile (kilometer).”

PUBLIC USE MICRODATA AREAS

Public Use Microdata Areas (PUMAs) are geographic areas for which the Census Bureau provides selected extracts of raw data from a small sample of census records that are screened to protect confidentiality. These extracts are referred to as public use microdata sample (PUMS) files.

For the 2010 Census, each state, the District of Columbia, Puerto Rico, and some Island Area participants delineated PUMAs for use in presenting PUMS data based on a 5 percent sample of decennial census or American Community Survey data. These areas are required to contain at least 100,000 people. This is different from Census 2000 when two types of PUMAs were defined: a 5 percent PUMA as for 2010 and an additional super-PUMA designed to provide a 1 percent sample. The PUMAs are identified by a five-digit census code unique within state.

PUERTO RICO

The Census Bureau treats the Commonwealth of Puerto Rico as the statistical equivalent of a state for data presentation purposes.

Municipio

The primary legal divisions of Puerto Rico are termed “municipios.” For data presentation purposes, the Census Bureau treats a municipio as the equivalent of a county in the United States.

Barrio, Barrio-Pueblo, and Subbarrio

The Census Bureau recognizes barrios and barrios-pueblo as the primary legal divisions of municipios. These entities are similar to the minor civil divisions (MCDs) used for reporting data in 29 states of the United States. Subbarrios in 23 municipios are the primary legal subdivisions of the barrios-pueblo and some barrios. The Census Bureau presents the same types of statistical data for these subminor civil divisions (sub-MCDs) as it does for the barrios and barrios-pueblo. (There is no geographic entity in the United States equivalent to the subbarrio.)

Zona Urbana and Comunidad

There are no incorporated places in Puerto Rico; instead, the Census Bureau provides data for two types of census designated places (CDPs): zonas urbanas, representing the governmental center of each municipio, and comunidades, representing other settlements. There are no minimum population size requirements for zonas urbanas and comunidades.

Some types of geographic entities do not apply in Puerto Rico. For instance, Puerto Rico is not in any census region or census division (see also "[Congressional District](#)").

SCHOOL DISTRICTS (ELEMENTARY, SECONDARY, AND UNIFIED)

School Districts are geographic entities within which state, county, local officials, the Bureau of Indian Affairs, or the U.S. Department of Defense provide public educational services for the area's residents. The Census Bureau obtains the boundaries, names, local education agency codes, and school district levels for school districts from state and local school officials for the primary purpose of providing the U.S. Department of Education with estimates of the number of children "at risk" within each school district, county, and state. This information serves as the basis for the Department of Education to determine the annual allocation of Title I funding to states and school districts.

The Census Bureau tabulates data for three types of school districts: elementary, secondary, and unified. Each school district is assigned a five-digit code that is unique within state. School district codes are the local education agency number assigned by the Department of Education and are not necessarily in alphabetical order by school district name.

The elementary school districts provide education to the lower grade/age levels and the secondary school districts provide education to the upper grade/age levels. Unified school districts provide education to children of all school ages in their service areas. In general, where there is a unified school district, no elementary or secondary school district exists; and where there is an elementary school district, the secondary school district may or may not exist.

The Census Bureau's representation of school districts in various data products is based both on the grade range that a school district operates and also the grade range for which the school district is financially responsible. For example, a school district is defined as an elementary school district if its operational grade range is less than the full kindergarten through 12 or prekindergarten through 12 grade range (for example, K-6 or pre-K-8). These elementary school districts do not provide direct educational services for grades 7-12, 9-12, or similar ranges. Some elementary school districts are financially responsible for the education of all school-aged children within their service areas and rely on other school districts to provide service for those grade ranges that are not operated by these elementary school districts. In these situations, in order to allocate all school-aged children to these school districts, the secondary school district code field is blank. For elementary school districts where the operational grade range and financially responsible grade range are the same, the secondary school district code field will contain a secondary school district code. There are no situations where an elementary school district does not exist and a secondary school district exists in Census Bureau records.

STATE OR STATISTICALLY EQUIVALENT ENTITY

States and Equivalent Entities are the primary governmental divisions of the United States. In addition to the 50 states, the Census Bureau treats the District of Columbia, Puerto Rico, American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands as the statistical equivalents of states for the purpose of data presentation.

STATE LEGISLATIVE DISTRICTS (UPPER AND LOWER CHAMBERS)

State Legislative Districts (SLDs) are the areas from which members are elected to state legislatures. The Census Bureau first reported data for SLDs as part of the 2000 Public Law (P.L.) 94-171 Redistricting Data File.

Current SLDs (2010 Election Cycle)—States participating in Phase 1 of the 2010 Census Redistricting Data Program voluntarily provided the Census Bureau with the 2006 election cycle boundaries, codes, and, in some cases, names for their SLDs. All 50 states, plus the District of Columbia and Puerto Rico, participated in Phase 1, State Legislative District Project (SLDP) of the 2010 Census Redistricting Data

Program. States subsequently provided legal changes to those plans through the Redistricting Data Office and/or corrections as part of Phase 2 of the 2010 Census Redistricting Data Program, as needed.

The SLDs embody the upper (senate—SLDU) and lower (house—SLDL) chambers of the state legislature. Nebraska has a unicameral legislature and the District of Columbia has a single council, both of which the Census Bureau treats as upper-chamber legislative areas for the purpose of data presentation. A unique three-character census code, identified by state participants, is assigned to each SLD within a state. In Connecticut, Hawaii, Illinois, Louisiana, Maine, Massachusetts, New Jersey, Ohio, and Puerto Rico, state officials did not define the SLDs to cover all of the state or state equivalent area (usually bodies of water). In these areas with no SLDs defined, the code “ZZZ” has been assigned, which is treated within state as a single SLD for purposes of data presentation. Maryland also has areas with no SLDs defined; in Maryland, these areas are coded with an initial “Z” by county or equivalent and treated as a unique SLD by county or equivalent. In Nebraska and the District of Columbia, the Census Bureau assigned the code 999 to represent a single SLDL where legally none exist.

SLD Names—The Census Bureau first reported names for SLDs as part of Phase 1 of the 2010 Census Redistricting Data Program. The SLD names with their translated legal/statistical area description are associated only with the current SLDs. Not all states provided names for their SLDs, therefore the code (or number) also serves as the name.

TRIBAL BLOCK GROUP

The 2010 tribal block group concept and criteria are completely different from those used in 2000. For the Census 2000, tribal block groups were the standard state-county-census tract-block group areas retabulated under an American Indian area hierarchy; that is, American Indian area-tribal census tract-tribal block group. Tribal block groups only were applicable to legal federally recognized American Indian reservation and off-reservation trust land areas. Tribal block groups were defined to provide statistically significant sample data for small areas within American Indian areas, particularly those American Indian areas that crossed state or county boundaries where these boundaries were not meaningful for statistical purposes. The 2000 tribal block groups used the block group numbers and comprised all blocks beginning with a single number.

The 2010 tribal block groups are defined independently of the standard county-based block group delineation. For federally recognized American Indian tribes with reservations or off-reservation trust land and a population less than 1,200, a single tribal block group is defined. Tribal participants in qualifying areas with a population greater than 1,200 could define additional block groups within their reservation and/or off-reservation trust land without regard to the standard block group configuration.

Tribal block groups will contain blocks beginning with the same number as the standard county-based block group and could contain seemingly duplicate block numbers. To better identify and differentiate tribal block groups from county-based block groups, tribal block groups use the letter range A through K (except “I,” which could be confused with a number “1”) to identify and code the tribal block group. Tribal block groups nest within tribal census tract.

TRIBAL CENSUS TRACT

The 2010 tribal census tract concept and criteria are completely different from those used in 2000. Tribal census tracts (also known as tribal tracts) in 2000 were the standard state-county-census tract areas retabulated under an American Indian area hierarchy; that is, American Indian area-tribal census tract. Federally recognized tribes with a reservation or off-reservation trust land delineated tribal census tracts working with local census tract participants to produce a single census tract plan. Tribal census tracts were designed to be permanent statistical divisions of American Indian areas for the presentation of comparable data between censuses, particularly for those American Indian areas that crossed state or county boundaries where these boundaries were not meaningful for statistical purposes.

For 2010, tribal census tracts are defined independently of the standard county-based tract delineation. For federally recognized American Indian tribes with reservations or off-reservation trust land and a population less than 2,400, a single tribal census tract is defined. Qualifying areas with a population greater than 2,400 could define additional tribal census tracts within their area.

In 2000, the tract number range of 9400 through 9499 was reserved for tribal census tracts and was required for those tribal census tracts that crossed state or county boundaries. Not all tribal census tracts in 2000, however, used this range. For 2010, tribal census tract codes will be six characters long with a leading “T” alphabetic character followed by five numeric codes having an implied decimal between the fourth and fifth character; for example, T01000, which translates as tribal census tract 10. Tribal block groups will nest within tribal census tract. Since individual blocks are defined within the standard state-county-census tract hierarchy, a tribal census tract can contain seemingly duplicate block numbers, thus tribal census tracts cannot be used to uniquely identify census blocks.

UNITED STATES

The United States consists of the 50 states and the District of Columbia.

URBAN AND RURAL

For the 2010 Census, the Census Bureau classified as urban all territory, population, and housing units located within urbanized areas (UAs) and urban clusters (UCs), both defined using the same criteria. The Census Bureau delineates UA and UC boundaries that represent densely developed territory, encompassing residential, commercial, and other nonresidential urban land uses. In general, this territory consists of areas of high population density and urban land use resulting in a representation of the “urban footprint.” Rural consists of all territory, population, and housing units located outside UAs and UCs.

For the 2010 Census, the urban and rural classification was applied to the 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands.

Urbanized Areas (UAs)—An urbanized area consists of densely developed territory that contains 50,000 or more people. The Census Bureau delineates UAs to provide a better separation of urban and rural territory, population, and housing in the vicinity of large places.

Urban Clusters (UCs)—An urban cluster consists of densely developed territory that has at least 2,500 people but fewer than 50,000 people. The Census Bureau first introduced the UC concept for Census 2000 to provide a more consistent and accurate measure of urban population, housing, and territory throughout the United States, Puerto Rico, and the Island Areas.

Urban Area Titles and Codes—The title of each UA and UC may contain up to three incorporated place or census designated place (CDP) names and will include the two-letter U.S. Postal Service abbreviation for each state or statistically equivalent entity into which the UA or UC extends. However, if the UA or UC does not contain an incorporated place or CDP, the urban area title will include the single name of a minor civil division or populated place recognized by the U.S. Geological Survey’s Geographic Names Information System.

Each UC and UA is assigned a five-digit numeric census code based on a national alphabetical sequence of all urban area names. A separate flag is included in data tabulation files to differentiate between UAs and UCs. In printed reports, this differentiation is included in the name.

Central Place—The 2010 Census urban areas will no longer include one or more designated central places. In preceding censuses, the central place included all incorporated or census designated places included in the urban area title, plus additional incorporated areas that met a population size criterion. The concept of central place for urban areas no longer is being applied.

Relationship to Other Geographic Entities—Geographic entities, such as metropolitan areas, counties, minor civil divisions, places, and census tracts, often contain both urban and rural territory, population, and housing units.

URBAN GROWTH AREAS

Urban Growth Areas (UGAs) are legally defined entities in Oregon and Washington that the Census Bureau includes in the MAF/TIGER database in agreement with the states. UGAs, which are defined around incorporated places, are used to regulate urban growth. UGA boundaries, which need not follow visible features, are delineated cooperatively by state and local officials and then confirmed in state law. UGAs are a pilot project first defined only in Oregon for Census 2000. Each UGA is identified by a five-digit numeric census code, usually the same as the five-digit Federal Information Processing Series (FIPS) code associated with the incorporated place for which the UGA is named.

VOTING DISTRICTS

Voting Districts (VTDs) refer to the generic name for geographic entities, such as precincts, wards, and election districts, established by state governments for the purpose of conducting elections. States voluntarily participating in Phase 2 of the 2010 Census Redistricting Data Program provided the Census Bureau with boundaries, codes, and names for their VTDs. Each VTD is identified by a one-to-six-character alphanumeric census code that is unique within county. The code "ZZZZZZ" identifies a portion of counties (usually bodies of water) for which no VTDs were identified. For the 2010 Census, only Rhode Island did not participate in Phase 2 (the Voting District/Block Boundary Suggestion Project) of the 2010 Census Redistricting Data Program. Kentucky chose not to provide VTDs as part of their participation in Phase 2, and the states of Montana and Oregon provided VTDs for some counties. Therefore, for 2010 Census data products, no VTDs exist in select counties in Montana and Oregon or for the states of Rhode Island and Kentucky in their entirety. Participating states often submitted VTDs conforming to the feature network in the MAF/TIGER database rather than the complete legal boundary of the VTD. If requested by the participating state, the Census Bureau identified the VTDs that represent an actual voting district with an "A" in the voting district indicator field. Where a participating state indicated that the VTD has been modified to follow existing features, the VTD is a pseudo-VTD, and the voting district indicator contains "P."

ZIP CODE TABULATION AREAS

ZIP Code Tabulation Areas (ZCTAs) are approximate area representations of U.S. Postal Service (USPS) five-digit ZIP Code service areas that the Census Bureau creates using whole blocks to present statistical data from censuses and surveys. The Census Bureau defines ZCTAs by allocating each block that contains addresses to a single ZCTA, usually to the ZCTA that reflects the most frequently occurring ZIP Code for the addresses within that tabulation block. Blocks that do not contain addresses but are completely surrounded by a single ZCTA (enclaves) are assigned to the surrounding ZCTA; those surrounded by multiple ZCTAs will be added to a single ZCTA based on limited buffering performed between multiple ZCTAs. The Census Bureau identifies five-digit ZCTAs using a five-character numeric code that represents the most frequently occurring USPS ZIP Code within that ZCTA, and this code may contain leading zeros.

There are significant changes to the 2010 ZCTA delineation from that used in 2000. Coverage was extended to include the Island Areas for 2010 so that the United States, Puerto Rico, and the Island Areas have ZCTAs. Unlike 2000, when areas that could not be assigned to a ZCTA were given a generic code ending in "XX" (land area) or "HH" (water area), for 2010 there is no universal coverage by ZCTAs, and only legitimate five-digit areas are defined. The 2010 ZCTAs will better represent the actual Zip Code service areas because the Census Bureau initiated a process before creation of 2010 blocks to add block boundaries that split polygons with large numbers of addresses using different Zip Codes.

Data users should not use ZCTAs to identify the official USPS ZIP Code for mail delivery. The USPS makes periodic changes to ZIP Codes to support more efficient mail delivery. The ZCTAs process used primarily residential addresses and was biased towards Zip Codes used for city-style mail delivery, thus there may be Zip Codes that are primarily nonresidential or boxes only that may not have a corresponding ZCTA.

INTRODUCTION

The 2010 Census data products provide, except where specifically noted, counts of the resident population of the United States. The U.S. resident population includes everyone whose usual place of residence was in the 50 states and the District of Columbia at the time of the 2010 Census.

In the design of summary file tables, the Census Bureau strives for consistency in terminology and cell label structure to facilitate processing, review, and usability. Data users see the same patterns repeated in various cross-tabulated tables. Unfortunately, at times, the use of a pattern creates illogical results, such as the display of data for the population 65 years and over in juvenile correctional facilities.

POPULATION CHARACTERISTICS

Age

The data on age were derived from answers to a two-part question (i.e., age and date of birth). The age classification for a person in census tabulations is the age of the person in completed years as of April 1, 2010, the census reference date. Both age and date of birth responses are used in combination to

determine the most accurate age for the person as of the census reference date. Inconsistently reported and missing values are assigned or allocated based on the values of other variables for that person, from other people in the household or from people in other households (i.e., hot-deck imputation).

Age data are tabulated in age groupings and single years of age. Data on age also are used to classify other characteristics in census tabulations.

Median Age—This measure divides the age distribution into two equal parts: one-half of the cases falling below the median value and one-half above the value. Median age is computed on the basis of a single-year-of-age distribution using a linear interpolation method.

Limitation of the data—There is some tendency for respondents to provide their age as of the date they completed the census questionnaire or interview, not their age as of the census reference date. The two-part question and editing procedures have attempted to minimize the effect of this reporting problem on tabulations. Additionally, the current census age question displays the census reference date prominently, and interviewer training emphasizes the importance of collecting age as of the reference date.

Respondents sometimes round a person's age up if they were close to having a birthday. For most single years of age, the misstatements are largely offsetting. The problem is most pronounced at age 0. Also, there may have been more rounding up to age 1 to avoid reporting age as 0 years. (Age in completed months was not collected for infants under age 1.) Editing procedures correct this problem.

There is some respondent resistance to reporting the ages of babies in completed years (i.e., 0 years old when the baby is under 1 year old). Instead, babies' ages are sometimes reported in months. The two-part question along with enhanced editing and data capture procedures correct much of this problem before the age data are finalized in tabulations. Additionally, the current census age question includes an instruction for babies' ages to be answered as "0" years old when they are under 1 year old.

Age heaping is a common age misreporting error. Age heaping is the tendency for people to overreport ages (or years of birth) that end in certain digits (commonly digits "0" or "5") and underreport ages or years of birth ending in other digits. The two-part question helps minimize the effect of age heaping on the final tabulations.

Age data for centenarians have a history of data quality challenges. The counts in the 1970 and 1980 Censuses for people 100 years and over were substantially overstated. Editing and data collection methods have been enhanced in order to meet the data quality challenges for this population.

It also has been documented that the population aged 69 in the 1970 Census and the population aged 79 in the 1980 Census were overstated. The population aged 89 in 1990 and the population aged 99 in 2000 did not have an overstated count. (For more information on the design of the age question, see the "Comparability" section below.)

Comparability—Age data have been collected in every census. However, there have been some differences in the way they have been collected and processed over time. In the 2010 Census (as in Census 2000), each individual provided both an age and an exact date of birth. The 1990 Census collected age and year of birth. Prior censuses had collected month and quarter of birth in addition to age and year of birth. The 1990 Census change was made so that coded information could be obtained for both age and year of birth.

In each census since 1940, the age of a person was assigned when it was not reported. In censuses before 1940, with the exception of 1880, people of unknown age were shown as a separate category. Since 1960, assignment of unknown age has been performed by a general procedure described as "imputation." The specific procedures for imputing age have been different in each census. (For more information on imputation, see ["2010 Census: Operational Overview and Accuracy of the Data."](#))

Hispanic or Latino Origin

The data on the Hispanic or Latino population were derived from answers to a question that was asked of all people. The terms “Hispanic,” “Latino,” and “Spanish” are used interchangeably. Some respondents identify with all three terms, while others may identify with only one of these three specific terms. People who identify with the terms “Hispanic,” “Latino,” or “Spanish” are those who classify themselves in one of the specific Hispanic, Latino, or Spanish categories listed on the questionnaire (“Mexican,” “Puerto Rican,” or “Cuban”) as well as those who indicate that they are “another Hispanic, Latino, or Spanish origin.” People who do not identify with one of the specific origins listed on the questionnaire but indicate that they are “another Hispanic, Latino, or Spanish origin” are those whose origins are from Spain, the Spanish-speaking countries of Central or South America, or the Dominican Republic. Up to two write-in responses to the “another Hispanic, Latino, or Spanish origin” category are coded.

Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be any race.

Some tabulations are shown by the origin of the householder. In all cases where the origin of households, families, or occupied housing units is classified as Hispanic, Latino, or Spanish, the origin of the householder is used. (See the discussion of householder under [“Household Type and Relationship.”](#))

If an individual did not provide a Hispanic origin response, his or her origin was allocated using specific rules of precedence of household relationship. For example, if origin was missing for a natural-born child in the household, then either the origin of the householder, another natural-born child, or spouse of the householder was allocated.

If Hispanic origin was not reported for anyone in the household and origin could not be obtained from a response to the race question, then their origin was assigned based on their prior census record (either from Census 2000 or the American Community Survey), if available. If not, then the Hispanic origin of a householder in a previously processed household with the same race was allocated. (For more information on allocation, see [“2010 Census: Operational Overview and Accuracy of the Data.”](#)) As in Census 2000, surnames (Spanish and non-Spanish) were used to assist in allocating an origin or race.

Comparability—There are four changes to the Hispanic origin question for the 2010 Census. First, the wording of the question differs from that in 2000. In 2000, the question asked if the person was “Spanish/Hispanic/Latino.” In 2010, the question asks if the person is “of Hispanic, Latino, or Spanish origin.” Second, in 2000, the question provided an instruction, “Mark ☒ the ‘No’ box if **not** Spanish/Hispanic/Latino.” The 2010 Census question provided no specific instruction for non-Hispanics. Third, in 2010, the “Yes, another Hispanic, Latino, or Spanish origin” category provided examples of six Hispanic origin groups (Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, Spaniard, and so on) and instructed respondents to “print origin.” In 2000, no Hispanic origin examples were given. Finally, the fourth change was the addition of a new instruction in the 2010 Census that was not used in Census 2000. The instruction is stated as follows: “NOTE: Please answer BOTH Question 8 about Hispanic origin and Question 9 about race. For this census, Hispanic origins are not races.”

There were two changes to the Hispanic origin question for Census 2000. First, the sequence of the race and Hispanic origin questions for Census 2000 differs from that in 1990; in 1990, the race question preceded the Hispanic origin question. Testing prior to Census 2000 indicated that response to the Hispanic origin question could be improved by placing it before the race question without affecting the response to the race question. Second, there was an instruction preceding the Hispanic origin question indicating that respondents should answer both the Hispanic origin and the race questions. This instruction was added to give emphasis to the distinct concepts of the Hispanic origin and race questions, and emphasized the need for both pieces of information.

Furthermore, there was a change in the processing of the Hispanic origin and race responses. In the 1990 Census, respondents provided Hispanic origin responses in the race question and race responses in the Hispanic origin question. In 1990, the Hispanic origin question and the race question had separate edits; therefore, although information may have been present on the questionnaire, it was not fully utilized due to the discrete nature of the edits. However, for Census 2000, there was a joint race and Hispanic origin edit that utilized Hispanic origin and race information regardless of the location.

Household Type and Relationship

Household

A household includes all the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and which have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements. In the 2010 Census data products, the count of households or householders equals the count of occupied housing units.

Average Household Size—Average household size is a measure obtained by dividing the number of people in households by the number of households. In cases where people in households are cross-classified by race or Hispanic origin, people in the household are classified by the race or Hispanic origin of the householder rather than the race or Hispanic origin of each individual. Average household size is rounded to the nearest hundredth.

Relationship to Householder

Householder—The data on relationship to householder were derived from answers to Question 2, which was asked of all people in housing units. One person in each household is designated as the householder. In most cases, this is the person, or one of the people, in whose name the home is owned, being bought, or rented and who is listed on line one of the questionnaire. If there is no such person in the household, any adult household member 15 years old and over could be designated as the householder.

Households are classified by type according to the sex of the householder and the presence of relatives. Two types of householders are distinguished: a family householder and a nonfamily householder. A family householder is a householder living with one or more individuals related to him or her by birth, marriage, or adoption. The householder and all people in the household related to him or her are family members. A nonfamily householder is a householder living alone or with nonrelatives only.

Spouse—The “spouse” category includes a person identified as the husband or wife of the householder and who is of the opposite sex. For most of the tables, unless otherwise specified, it does not include same-sex spouses even if a marriage was performed in a state issuing marriage certificates for same-sex couples.

Child—The “child” category includes a son or daughter by birth, a stepchild, or adopted child of the householder, regardless of the child’s age or marital status. The category excludes sons-in-law, daughters-in-law, and foster children.

Biological Son or Daughter—The son or daughter of the householder by birth.

Adopted Son or Daughter—The son or daughter of the householder by legal adoption. If a stepson, stepdaughter, or foster child has been legally adopted by the householder, the child is then classified as an adopted child.

Stepson or Stepdaughter—The son or daughter of the householder through marriage but not by birth, excluding sons-in-law and daughters-in-law. If a stepson or stepdaughter of the householder has been legally adopted by the householder, the child is then classified as an adopted child.

Own Children—A child under 18 years who is a son or daughter by birth, a stepchild, or an adopted child of the householder is included in the “own children” category.

Related Children—Any child under 18 years old who is related to the householder by birth, marriage, or adoption is included in the “related children” category. Children, by definition, exclude persons under 18 years who maintain households or are spouses or unmarried partners of householders.

Other Relatives—In tabulations, the category “other relatives” includes any household member related to the householder by birth, marriage, or adoption but not included specifically in another relationship category. In certain detailed tabulations, the following categories may be shown:

Grandchild—The grandson or granddaughter of the householder.

Brother/Sister—The brother or sister of the householder, including stepbrothers, stepsisters, and brothers and sisters by adoption. Brothers-in-law and sisters-in-law are included in the “Other Relative” category on the questionnaire.

Parent—The father or mother of the householder, including a stepparent or adoptive parent. Fathers-in-law and mothers-in-law are included in the “Parent-in-law” category on the questionnaire.

Parent-in-Law—The mother-in-law or father-in-law of the householder.

Son-in-law or Daughter-in-Law—The spouse of the child of the householder.

Other Relatives—Anyone not listed in a reported category above who is related to the householder by birth, marriage, or adoption (brother-in-law, grandparent, nephew, aunt, cousin, and so forth).

Nonrelatives—This category includes any household member not related to the householder by birth, marriage, or adoption. The following categories may be presented in more detailed tabulations:

Roomer or Boarder—A roomer or boarder is a person who lives in a room in the household of the householder. Some sort of cash or noncash payment (e.g., chores) is usually made for their living accommodations.

Housemate or Roommate—A housemate or roommate is a person aged 15 years and over who is not related to the householder and who shares living quarters primarily in order to share expenses.

Unmarried Partner—An unmarried partner is a person aged 15 years and over who is not related to the householder, who shares living quarters, and who has a close personal relationship with the householder. Responses of “same-sex spouse” are edited into this category.

Other Nonrelatives—Anyone who is not related by birth, marriage, or adoption to the householder and who is not described by the categories given above. Unrelated foster children or unrelated foster adults are included in this category, “Other Nonrelatives.” A foster child who has been adopted by the householder is classified as an adopted child.

When relationship is not reported for an individual, it is allocated according to the responses for age and sex for that person while maintaining consistency with responses for other individuals in the household. (For more information on allocation, see ["2010 Census: Operational Overview and Accuracy of the Data."](#))

Families

Family Type—A family consists of a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone—these are called “nonfamily households.” Same-sex unmarried partner households are included in the “family households” category only if there is at least one additional person related to the householder by birth or adoption.

Families are classified by type as either a “husband-wife family” or “other family” according to the sex of the householder and the presence of relatives. The data on family type are based on answers to questions on sex and relationship.

Husband-Wife Family—A family in which the householder and his or her spouse of the opposite sex are enumerated as members of the same household.

Other Family:

- *Male householder, no wife present*—A family with a male householder and no wife of householder present.
- *Female householder, no husband present*—A family with a female householder and no husband of householder present.

Average Family Size—Average family size is a measure obtained by dividing the number of people in families by the total number of families (or family householders). In cases where the measures “people in family” or “people per family” are cross-tabulated by race or Hispanic origin, the race or Hispanic origin refers to the householder rather than the race or Hispanic origin of each individual. Nonrelatives of the householder living in family households are not counted as part of the family. They are included in the count of average household size. Average family size is rounded to the nearest hundredth.

Multigenerational Household

A multigenerational household is one that contains three or more parent-child generations; for example, the householder, child of householder (either biological, stepchild, or adopted child), and grandchildren of householder. A householder with a parent or parent-in-law of the householder and a child of the householder may also be a multigenerational household.

Unmarried-Partner Household

An unmarried-partner household is a household other than a “husband-wife household” that includes a householder and an unmarried partner. An “unmarried partner” can be of the same sex or of the opposite sex as the householder. An “unmarried partner” in an “unmarried-partner household” is an adult who is unrelated to the householder but shares living quarters and has a close personal relationship with the householder. An unmarried-partner household also may be a family household or a nonfamily household, depending on the presence or absence of another person in the household who is related to the householder. There may be only one unmarried partner per household, and an unmarried partner may not be included in a husband-wife household, as the householder cannot have both a spouse and an unmarried partner. Same-sex married-couple households are edited into this category.

Comparability—The 2000 relationship category “Natural-born son/daughter” has been replaced by “Biological son or daughter” for 2010. The category “Foster child” was dropped due to space limitations on the 2010 questionnaire. Foster children in 2010 are included in the category “Other nonrelatives.” They cannot be tabulated separately. The term “married-couple” family in tabulations has been replaced by “husband-wife” family. In all standard 2010 tabulations, the term “spouse” refers to only a person who is married to and living with the householder and is of the opposite sex. Data for unmarried partners are comparable to data presented in 2000. Data on same-sex couple households will be presented for the first time in a special product.

Institutionalized Population

See [“Group Quarters.”](#)

Noninstitutionalized Population

See [“Group Quarters.”](#)

Race

The data on race were derived from answers to the question on race that was asked of all people. The U.S. Census Bureau collects race data in accordance with guidelines provided by the U.S. Office of Management and Budget (OMB), and these data are based on self-identification. The racial categories included in the census questionnaire generally reflect a social definition of race recognized in this country and not an attempt to define race biologically, anthropologically, or genetically. In addition, it is recognized that the categories of the race item include racial and national origin or sociocultural groups. People may choose to report more than one race to indicate their racial mixture, such as “American Indian” and “White.” People who identify their origin as Hispanic, Latino, or Spanish may be any race.

The racial classifications used by the Census Bureau adhere to the October 30, 1997, *Federal Register* notice entitled, “Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity” issued by OMB. These standards govern the categories used to collect and present federal data on race and ethnicity. OMB requires five minimum categories (White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander) for race. The race categories are described below with a sixth category, “Some Other Race,” added with OMB approval. In addition to the five race groups, OMB also states that respondents should be offered the option of selecting one or more races.

If an individual did not provide a race response, the race or races of the householder or other household members were imputed using specific rules of precedence of household relationship. For example, if race was missing for a natural-born child in the household, then either the race or races of the householder, another natural-born child, or spouse of the householder were allocated.

If race was not reported for anyone in the household, then their race was imputed based on their prior census record (either from Census 2000 or the American Community Survey), if available. If not, then the race or races of a householder in a previously processed household were allocated.

Definitions from OMB guide the Census Bureau in classifying written responses to the race question:

White—A person having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as “White” or report entries such as Irish, German, Italian, Lebanese, Arab, Moroccan, or Caucasian.

Black or African American—A person having origins in any of the Black racial groups of Africa. It includes people who indicate their race as “Black, African Am., or Negro” or report entries such as African American, Kenyan, Nigerian, or Haitian.

American Indian or Alaska Native—A person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment. This category includes people who indicate their race as “American Indian or Alaska Native” or report entries such as Navajo, Blackfeet, Inupiat, Yup’ik, or Central American Indian groups or South American Indian groups.

Respondents who identified themselves as “American Indian or Alaska Native” were asked to report their enrolled or principal tribe. Therefore, tribal data in tabulations reflect the written entries reported on the questionnaires. Some of the entries (for example, Metlakatla Indian Community and Umatilla) represent reservations or a confederation of tribes on a reservation. The information on tribe is based on self-identification and, therefore, does not reflect any designation of federally or state-recognized tribe. The information for the 2010 Census was derived from the American Indian and Alaska Native Tribal Classification List for Census 2000 and updated from 2002 to 2009 based on the annual *Federal Register* notice entitled “Indian Entities Recognized and Eligible to Receive Services From the United States Bureau of Indian Affairs,” Department of the Interior, Bureau of Indian Affairs, issued by OMB, and through consultation with American Indian and Alaska Native communities and leaders.

The American Indian categories shown in Summary Files 1 and 2 represent tribal groupings, which refer to the combining of individual American Indian tribes, such as Fort Sill Apache, Mescalero Apache, and San Carlos Apache, into the general Apache tribal grouping.

The Alaska Native categories shown in Summary Files 1 and 2 represent tribal groupings, which refer to the combining of individual Alaska Native tribes, such as King Salmon Tribe, Native Village of Kanatak, and Sun’aq Tribe of Kodiak, into the general Aleut tribal grouping.

Asian—A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. It includes people who indicate their race as “Asian Indian,” “Chinese,” “Filipino,” “Korean,” “Japanese,” “Vietnamese,” and “Other Asian” or provide other detailed Asian responses.

Asian Indian—Includes people who indicate their race as “Asian Indian” or report entries such as India or East Indian.

Bangladeshi—Includes people who provide a response such as Bangladeshi or Bangladesh.

Bhutanese—Includes people who provide a response such as Bhutanese or Bhutan.

Burmese—Includes people who provide a response such as Burmese or Burma.

Cambodian—Includes people who provide a response such as Cambodian or Cambodia.

Chinese—Includes people who indicate their race as “Chinese” or report entries such as China or Chinese American. In some census tabulations, written entries of Taiwanese are included with Chinese, while in others they are shown separately.

Filipino—Includes people who indicate their race as “Filipino” or report entries such as Philippines or Filipino American.

Hmong—Includes people who provide a response such as Hmong or Mong.

Indonesian—Includes people who provide a response such as Indonesian or Indonesia.

Japanese—Includes people who indicate their race as “Japanese” or report entries such as Japan or Japanese American.

Korean—Includes people who indicate their race as “Korean” or report entries such as Korea or Korean American.

Laotian—Includes people who provide a response such as Laotian or Laos.

Malaysian—Includes people who provide a response such as Malaysian or Malaysia.

Nepalese—Includes people who provide a response such as Nepalese or Nepal.

Pakistani—Includes people who provide a response such as Pakistani or Pakistan.

Sri Lankan—Includes people who provide a response such as Sri Lankan or Sri Lanka.

Taiwanese—Includes people who provide a response such as Taiwanese or Taiwan.

Thai—Includes people who provide a response such as Thai or Thailand.

Vietnamese—Includes people who indicate their race as “Vietnamese” or report entries such as Vietnam or Vietnamese American.

Other Asian, specified—Includes people who provide a response of another Asian group, such as Iwo Jiman, Maldivian, Mongolian, Okinawan, or Singaporean.

Other Asian, not specified—Includes respondents who checked the Other Asian response category on the census questionnaire and did not write in a specific group or wrote in a generic term such as “Asian” or “Asiatic.”

Native Hawaiian or Other Pacific Islander—A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. It includes people who indicate their race as “Native Hawaiian,” “Guamanian or Chamorro,” “Samoan,” and “Other Pacific Islander” or provide other detailed Pacific Islander responses.

Native Hawaiian—Includes people who indicate their race as “Native Hawaiian” or report entries such as Part Hawaiian or Hawaiian.

Samoan—Includes people who indicate their race as “Samoan” or report entries such as American Samoan or Western Samoan.

Tongan—Includes people who provide a response such as Tongan or Tonga.

Other Polynesian—Includes people who provide a response of another Polynesian group, such as Tahitian, Tokelauan, or wrote in a generic term such as “Polynesian.”

Guamanian or Chamorro—Includes people who indicate their race as “Guamanian or Chamorro” or report entries such as Chamorro or Guam.

Marshallese—Includes people who provide a response such as Marshallese or Marshall Islands.

Other Micronesian—Includes people who provide a response of another Micronesian group, such as Carolinian, Chuukese, I-Kiribati, Kosraean, Mariana Islander, Palauan, Pohnpeian, Saipanese, Yapese, or wrote in a generic term such as “Micronesian.”

Fijian—Includes people who provide a response such as Fijian or Fiji.

Other Melanesian—Includes people who provide a response of another Melanesian group, such as Guinean, Hebrides Islander, Solomon Islander, or wrote in a generic term such as “Melanesian.”

Other Pacific Islander, not specified—Includes respondents who checked the Other Pacific Islander response category on the census questionnaire and did not write in a specific group or wrote in a generic term such as “Pacific Islander.”

Some Other Race—Includes all other responses not included in the “White,” “Black or African American,” “American Indian or Alaska Native,” “Asian,” and “Native Hawaiian or Other Pacific Islander” race categories described above. Respondents reporting entries such as multiracial, mixed, interracial, or a Hispanic,

Latino, or Spanish group (for example, Mexican, Puerto Rican, Cuban, or Spanish) in response to the race question are included in this category.

Two or More Races—People may choose to provide two or more races either by checking two or more race response check boxes, by providing multiple responses, or by some combination of check boxes and other responses. The race response categories shown on the questionnaire are collapsed into the five minimum race groups identified by OMB and the Census Bureau’s “Some Other Race” category. For data product purposes, “Two or More Races” refers to combinations of two or more of the following race categories:

1. White
2. Black or African American
3. American Indian or Alaska Native
4. Asian
5. Native Hawaiian or Other Pacific Islander
6. Some Other Race

There are 57 possible combinations (see Figure B-1) involving the race categories shown above. Thus, according to this approach, a response of “White” and “Asian” was tallied as Two or More Races, while a response of “Japanese” and “Chinese” was not because “Japanese” and “Chinese” are both Asian responses.

Figure B-1.

Two or More Races (57 Possible Specified Combinations)

- 57. White; Black or African American; American Indian and Alaska Native; Asian; Native Hawaiian and Other Pacific Islander; Some Other Race

Race Concepts

Given the many possible ways of displaying data on race, data products will provide varying levels of detail. There are several additional concepts used to display race information for the six major race categories (White; Black or African American; American Indian or Alaska Native; Asian; Native Hawaiian or Other Pacific Islander; and Some Other Race) and the various details within these groups.

The concept “race *alone*” includes people who reported a single entry (e.g., Korean) and no other race, as well as people who reported two or more entries within the same major race group (e.g., Asian). For example, respondents who reported Korean and Vietnamese are part of the larger “Asian alone” race group.

The concept “race *alone or in combination*” includes people who reported a single race alone (e.g., Asian) and people who reported that race in combination with one or more of the other major race groups (e.g., White, Black or African American, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, and Some Other Race). The concept “race *alone or in combination*” concept, therefore, represents the maximum number of people who reported as that race group, either alone or in combination with one or more additional race(s). The sum of the six individual race “alone-or-in-combination” categories may add to more than the total population because people who reported more than one race were tallied in each race category.

The concept “race *alone or in any combination*” applies only to detailed race groups, such as American Indian and Alaska Native tribes, detailed Asian groups, and detailed Pacific Islander groups. For example, Korean alone or in any combination includes people who reported a single response (e.g., Korean), people who reported Korean and another Asian group (e.g., Korean and Vietnamese), and people who reported Korean in combination with one or more other non-Asian race groups (e.g., White, Black or African American, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, or Some Other Race).

Coding of Write-In Entries—The 2010 Census included an automated review, computer edit, and coding operation on a 100 percent basis for the write-in responses to the race question, similar to that used in Census 2000. There were two types of coding operations: 1) automated coding where a write-in response was automatically coded if it matched a write-in response already contained in a database known as the “master file” and 2) expert coding, which took place when a write-in response did not match an entry already on the master file and was sent to expert coders familiar with the subject matter. During the coding process, subject-matter specialists reviewed and coded written entries from the response areas on the race question: American Indian or Alaska Native, Other Asian, Other Pacific Islander, and Some Other Race. Up to 30 text characters were collected from each race write-in area, and up to two responses were coded and tabulated from each separate race write-in area.

Comparability—There are three changes to the race question for the 2010 Census. First, the note to respondents was changed to read, “Please answer BOTH Question 8 about Hispanic origin and Question 9 about race. For this census, Hispanic origins are not races.” Second, the wording of the race question was changed from “What is this person’s race? Mark ☐ one or more races to indicate what this person considers

himself/herself to be” to “What is Person 1’s race? Mark ☐ one or more boxes.” Third, examples were added to the “Other Asian” response categories (Hmong, Laotian, Thai, Pakistani, Cambodian, and so on) and the “Other Pacific Islander” response categories (Fijian, Tongan, and so on).

The treatment of ethnic or national origin write-in responses to the race question also was different. For Census 2000, data on single ancestry by race from the 1990 census were used to help make decisions about how to code ethnic or national origin responses into one or more race categories. Essentially, if 90 percent or more of people who reported a single, specific ancestry reported in a specific race category in 1990 (e.g., more than 90 percent of people indicating Haitian ancestry reported as Black in the question on race), then that race was used as the Census 2000 response. This 90 percent rule was not applied to write-in responses of American Indian and Alaska Native tribes, Asian groups, or Pacific Islander groups because the question on race was designed explicitly to obtain these types of responses. For example, a write-in response of “Haitian and Moroccan” was coded as “Black” and “Some Other Race.” “Moroccan” was coded as “Some Other Race” because less than 90 percent of people indicating Moroccan ancestry reported in one specific race category in the question on race.

For the 2010 Census, ethnic or national origin write-in responses to the race question were coded into one or more of the five OMB race categories, according to the 1997 OMB definitions of race. For example, a 2010 Census write-in response of “Haitian and Moroccan” was coded as “Black” and “White” following OMB’s definitions. If it was not possible to determine which OMB race category the ethnic group or national origin should be coded into, it was included in the “Some Other Race” category.

For more information about comparability to data collected in previous censuses, see Census 2000 Summary File 1 Technical Documentation prepared by the U.S. Census Bureau, 2001, at <www.census.gov/cen2000/doc/sf1.pdf>.

Sex

Individuals were asked to mark either “male” or “female” to indicate their sex. For most cases in which sex was not reported, the appropriate entry was determined from the person’s given (i.e., first) name and household relationship. Otherwise, sex was allocated according to the relationship to the householder and the age of the person. (For more information on allocation, see [“2010 Census: Operational Overview and Accuracy of the Data.”](#))

Sex Ratio—The sex ratio represents the balance between the male and female populations. Ratios above 100 indicate a larger male population, and ratios below 100 indicate a larger female population. This measure is derived by dividing the total number of males by the total number of females and then multiplying by 100. It is rounded to the nearest tenth.

Comparability—A question on the sex of individuals has been asked of the total population in every census.

Stepson or Stepdaughter

See [“Household Type and Relationship.”](#)

Type of Institution

See [“Group Quarters.”](#)

LIVING QUARTERS

All living quarters are classified as either housing units or group quarters. Living quarters are usually found in structures that are intended for residential use, but they also may be found in structures intended for nonresidential use. Any place where someone lives is considered to be a living quarters, such as an apartment, dormitory, shelter for people experiencing homelessness, barracks, or nursing facility. Even tents, old railroad cars, and boats are considered to be living quarters if someone claims them as his or

her residence. Note that structures that do not meet the definition of a living quarters at the time of listing may meet the definition at the time of enumeration. Some types of structures, such as those cited in items 1 and 2 below, are included in address canvassing operations as place holders, with the final decision on their living quarters status made during enumeration. Other types of structures, such as those cited in items 3 and 4 below, are not included in the address canvassing operation.

The following examples are not considered living quarters:

1. Structures, such as houses and apartments, that resemble living quarters but are being used entirely for nonresidential purposes, such as a store or an office, or used for the storage of business supplies or inventory, machinery, or agricultural products, are not enumerated.
2. Single units as well as units in multiunit residential structures under construction in which no one is living or staying are not considered living quarters until construction has reached the point where all exterior windows and doors are installed and final usable floors are in place. Units that do not meet these criteria are not enumerated.
3. Structures in which no one is living or staying that are open to the elements—that is, the roof, walls, windows, and/or doors no longer protect the interior from the elements—are not enumerated. Also, vacant structures with a posted sign indicating that they are condemned or they are to be demolished are not enumerated.
4. Boats, recreational vehicles (RVs), tents, caves, and similar types of shelter that no one is using as a usual residence are **not** considered living quarters and are not enumerated.

Group Quarters

Group quarters are places where people live or stay in a group living arrangement, which are owned or managed by an entity or organization providing housing and/or services for the residents. This is not a typical household-type living arrangement. These services may include custodial or medical care as well as other types of assistance, and residency is commonly restricted to those receiving these services. People living in group quarters are usually not related to each other.

Group quarters include such places as college residence halls, residential treatment centers, skilled-nursing facilities, group homes, military barracks, correctional facilities, and workers' dormitories.

Institutional Group Quarters

Institutional group quarters (group quarters type codes 101–106, 201–203, 301, 401–405) are facilities that house those who are primarily ineligible, unable, or unlikely to participate in the labor force while residents.

Correctional Facilities for Adults (codes 101–106)—Correctional facilities for adults include the following types:

Federal detention centers (code 101)—Federal detention centers are stand alone, generally multi-level, federally operated correctional facilities that provide “short-term” confinement or custody of adults pending adjudication or sentencing. These facilities may hold pretrial detainees, holdovers, sentenced offenders, and Immigration and Customs Enforcement (ICE) inmates, formerly called Immigration and Naturalization Service (INS) inmates. These facilities include Metropolitan Correctional Centers (MCCs), Metropolitan Detention Centers (MDCs), Federal Detention Centers (FDCs), Bureau of Indian Affairs Detention Centers, ICE Service Processing Centers, and ICE Contract Detention Facilities.

Federal (code 102) and state (code 103) prisons—Federal and state prisons are adult correctional facilities where people convicted of crimes serve their sentences. Common names include prison, penitentiary, correctional institution, federal or state correctional facility, and conservation camp. The prisons are classified by two types of control: 1) “federal” (operated by or for the Bureau of Prisons of

the U.S. Department of Justice) and 2) “state.” Residents who are forensic patients or criminally insane are classified on the basis of where they resided at the time of enumeration. Patients in hospitals (units, wings, or floors) operated by or for federal or state correctional authorities are counted in the prison population. Other forensic patients will be enumerated in psychiatric hospital units and floors for long-term non-acute patients. This category may include privately operated correctional facilities.

Local jails and other municipal confinement facilities (code 104)—Local jails and other municipal confinement facilities are correctional facilities operated by or for counties, cities, and American Indian and Alaska Native tribal governments. These facilities hold adults detained pending adjudication and/or people committed after adjudication. This category also includes work farms and camps used to hold people awaiting trial or serving time on relatively short sentences. Residents who are forensic patients or criminally insane are classified on the basis of where they resided at the time of enumeration. Patients in hospitals (units, wings, or floors) operated by or for local correctional authorities are counted in the jail population. Other forensic patients will be enumerated in psychiatric hospital units and floors for long-term non-acute care patients. This category may include privately operated correctional facilities.

Correctional residential facilities (code 105)—Correctional residential facilities are community-based facilities operated for correctional purposes. The facility residents may be allowed extensive contact with the community, such as for employment or attending school, but are obligated to occupy the premises at night. Examples of correctional residential facilities are halfway houses, restitution centers, and prerelease, work release, and study centers.

Military disciplinary barracks and jails (code 106)—Military disciplinary barracks and jails are correctional facilities managed by the military to hold those awaiting trial or convicted of crimes.

Juvenile Facilities (codes 201–203)—Juvenile facilities include the following:

Group homes for juveniles (non-correctional) (code 201)—Group homes for juveniles include community-based group living arrangements for youth in residential settings that are able to accommodate three or more clients of a service provider. The group home provides room and board and services, including behavioral, psychological, or social programs. Generally, clients are not related to the caregiver or to each other. Examples of non-correctional group homes for juveniles are maternity homes for unwed mothers, orphanages, and homes for abused and neglected children in need of services. Group homes for juveniles do not include residential treatment centers for juveniles or group homes operated by or for correctional authorities.

Residential treatment centers for juveniles (non-correctional) (code 202)—Residential treatment centers for juveniles include facilities that provide services primarily to youth on-site in a highly structured live-in environment for the treatment of drug/alcohol abuse, mental illness, and emotional/behavioral disorders. These facilities are staffed 24 hours a day. The focus of a residential treatment center is on the treatment program. Residential treatment centers for juveniles do not include facilities operated by or for correctional authorities.

Correctional facilities intended for juveniles (code 203)—Correctional facilities intended for juveniles include specialized facilities that provide strict confinement for their residents and detain juveniles awaiting adjudication, commitment or placement, and/or those being held for diagnosis or classification. Also included are correctional facilities where residents are permitted contact with the community for purposes such as attending school or holding a job. Examples of correctional facilities intended for juveniles are residential training schools and farms, reception and diagnostic centers, group homes operated by or for correctional authorities, detention centers, and boot camps for juvenile delinquents.

Nursing Facilities/Skilled-Nursing Facilities (code 301)—Nursing facilities/Skilled-nursing facilities include facilities licensed to provide medical care with 7-day, 24-hour coverage for people requiring

long-term non-acute care. People in these facilities require nursing care, regardless of age. Either of these types of facilities may be referred to as nursing homes.

Other Institutional Facilities (codes 401–405)—Other institutional facilities include the following:

Mental (psychiatric) hospitals and psychiatric units in other hospitals (code 401)—Mental (psychiatric) hospitals and psychiatric units in other hospitals include psychiatric hospitals, units and floors for long-term non-acute care patients. The primary function of the hospital, unit, or floor is to provide diagnostic and treatment services for long-term non-acute patients who have psychiatric-related illness. All patients are enumerated in this category.

Hospitals with patients who have no usual home elsewhere (code 402)—Hospitals with patients who have no usual home elsewhere include hospitals that have any patients who have no exit or disposition plan, or who are known as “boarder patients” or “boarder babies.” All hospitals are eligible for inclusion in this category except psychiatric hospitals, units, wings, or floors operated by federal, state, or local correctional authorities. Patients in hospitals operated by these correctional authorities will be counted in the prison or jail population. Psychiatric units and hospice units in hospitals are also excluded. Only patients with no usual home elsewhere are enumerated in this category.

In-patient hospice facilities (both free-standing and units in hospitals) (code 403)—In-patient hospice facilities (both free-standing and units in hospitals) include facilities that provide palliative, comfort, and supportive care for terminally ill patients and their families. Only patients with no usual home elsewhere are tabulated in this category.

Military treatment facilities with assigned patients (code 404)—Military treatment facilities with assigned patients include military hospitals and medical centers with active duty patients assigned to the facility. Only these patients are enumerated in this category.

Residential schools for people with disabilities (code 405)—Residential schools for people with disabilities include schools that provide the teaching of skills for daily living, education programs, and care for students with disabilities in a live-in environment. Examples of residential schools for people with disabilities are residential schools for the physically or developmentally disabled.

Noninstitutional Group Quarters

Noninstitutional group quarters (group quarters type codes 501, 601, 602, 701, 702, 704, 706, 801, 802, 900, 901, 903, 904) are facilities that house those who are primarily eligible, able, or likely to participate in the labor force while residents.

College/University Student Housing (code 501)—College/University student housing includes residence halls and dormitories, which house college and university students in a group living arrangement. These facilities are owned, leased, or managed either by a college, university, or seminary, or by a private entity or organization. Fraternity and sorority housing recognized by the college or university are included as college student housing. However, students attending the U.S. Naval Academy, U.S. Military Academy (West Point), U.S. Coast Guard Academy, and U.S. Air Force Academy are counted in military group quarters.

Military Quarters (codes 601 and 602)—Military quarters (code 601) are facilities that include military personnel living in barracks (including “open” barrack transient quarters) and dormitories and military ships (code 602). Patients assigned to Military Treatment Facilities and people being held in military disciplinary barracks and jails are not enumerated in this category. Patients in Military Treatment Facilities with no usual home elsewhere are not enumerated in this category.

Other Noninstitutional Facilities (codes 701, 702, 704, 706, 801, 802, 900, 901, 903, and 904)—Other noninstitutional facilities include the following:

Emergency and transitional shelters (with sleeping facilities) for people experiencing homelessness (code 701)—Emergency and transitional shelters (with sleeping facilities) for people experiencing homelessness are facilities where people experiencing homelessness stay overnight. These include:

1. Shelters that operate on a first-come, first-serve basis where people must leave in the morning and have no guaranteed bed for the next night.
2. Shelters where people know that they have a bed for a specified period of time (even if they leave the building every day).
3. Shelters that provide temporary shelter during extremely cold weather (such as churches). This category does not include shelters that operate only in the event of a natural disaster.

Examples are emergency and transitional shelters; missions; hotels and motels used to shelter people experiencing homelessness; shelters for children who are runaways, neglected, or experiencing homelessness; and similar places known to have people experiencing homelessness.

Soup kitchens, regularly scheduled mobile food vans, and targeted non-sheltered outdoor locations (codes 702, 704, and 706)—This category includes soup kitchens that offer meals organized as food service lines or bag or box lunches for people experiencing homelessness; street locations where mobile food vans regularly stop to provide food to people experiencing homelessness; and targeted non-sheltered outdoor locations where people experiencing homelessness live without paying to stay. This also would include persons staying in pre-identified car, recreational vehicle (RV), and tent encampments. Targeted non-sheltered outdoor locations must have a specific location description; for example, “the Brooklyn Bridge at the corner of Bristol Drive,” “the 700 block of Taylor Street behind the old warehouse,” or the address of the parking lot being utilized.

Group homes intended for adults (code 801)—Group homes intended for adults are community-based group living arrangements in residential settings that are able to accommodate three or more clients of a service provider. The group home provides room and board and services, including behavioral, psychological, or social programs. Generally, clients are not related to the caregiver or to each other. Group homes do not include residential treatment centers or facilities operated by or for correctional authorities.

Residential treatment centers for adults (code 802)—Residential treatment centers for adults provide treatment on-site in a highly structured live-in environment for the treatment of drug/alcohol abuse, mental illness, and emotional/behavioral disorders. They are staffed 24 hours a day. The focus of a residential treatment center is on the treatment program. Residential treatment centers do not include facilities operated by or for correctional authorities.

Maritime/Merchant vessels (code 900)—Maritime/merchant vessels include U.S. owned and operated flag vessels used for commercial or noncombatant government-related purposes at U.S. ports, on the sea, or on the Great Lakes.

Workers' group living quarters and Job Corps centers (code 901)—Workers' group living quarters and Job Corps centers include facilities such as dormitories, bunkhouses, and similar types of group living arrangements for agricultural and non-agricultural workers. This category also includes facilities that provide a full-time, year-round residential program offering a vocational training and employment program that helps young people 16 to 24 years old learn a trade, earn a high school diploma or GED, and get help finding a job. Examples are group living quarters at migratory farm-worker camps, construction workers' camps, Job Corps centers, and vocational training facilities.

Living quarters for victims of natural disasters (code 903)—Living quarters for victims of natural disasters are temporary group living arrangements established as a result of natural disasters.

Religious group quarters and domestic violence shelters (code 904)—Religious group quarters are living quarters owned or operated by religious organizations that are intended to house their members in

a group living situation. This category includes such places as convents, monasteries, and abbeys. Living quarters for students living or staying in seminaries are classified as college student housing, not religious group quarters. Domestic violence shelters are community-based homes, shelters, or crisis centers that provide housing for people who have sought shelter from household violence and who may have been physically abused.

Comparability—Due to the consolidation of group quarters types and general streamlining of the definitions, several changes have been implemented in the 2010 Census group quarters definitions and type codes that are reflected in 2010 Census data products.

As in Census 2000, group quarters are either institutional group quarters or noninstitutional group quarters.

Institutional group quarters are facilities that house those who are primarily ineligible, unable, or unlikely to participate in the labor force while residents. This definition has been simplified since the 1990 and 2000 Censuses (both used the same definition, which focused on institutions providing formally authorized, supervised care or custody) to focus on labor force participation.

The phrase “institutionalized persons” in the 1990 Census data was changed to “institutionalized population” in Census 2000 and continues in the 2010 Census.

Correctional facilities for adults—In the 2010 Census data products, the Census 2000 term “other type of correctional institutions” is categorized as “correctional residential facilities.”

Juvenile facilities—Those group quarters categorized as “homes for abused, dependent, and neglected children” (public, private, or ownership unknown) in the Census 2000 data products are categorized as “group homes for juveniles (non-correctional)” in the 2010 Census data products. Those categorized in “training schools” (public, private, and ownership unknown), “detention centers, reception or diagnostic centers,” and “type of juvenile institution unknown” in Census 2000 data products are categorized in the 2010 Census data products as “correctional facilities intended for juveniles” (i.e., training schools and farms, reception and diagnostic centers, detention centers, boot camps and group homes operated by or for correctional authorities).

Nursing facilities/skilled-nursing facilities—In the 2010 Census data products, all nursing homes are categorized as “nursing facilities/skilled-nursing facilities.”

Other institutional facilities—Those group quarters categorized as “schools, hospitals, or wards for the physically handicapped” in Census 2000 data products are categorized as “residential schools for people with disabilities” in the 2010 Census data products. “Military hospitals or wards for chronically ill” are classified as “military treatment facilities with assigned patients” in the 2010 Census data products. Also, what were called “military hospitals with patients who have no usual home elsewhere” in Census 2000 data products are categorized as “hospitals with patients who have no usual home elsewhere” in 2010 Census data products. “Hospices or homes for the chronically ill or other hospitals or wards for chronically ill” are categorized in the 2010 Census data products as “in-patient hospice facilities.” “Hospitals and wards for drug/alcohol abuse” and “mentally ill (psychiatric) hospitals or wards” are categorized in the 2010 Census data products as “mental (psychiatric) hospitals and psychiatric units in other hospitals.”

The phrase “staff residents” was used for staff living in institutions in both the 1990 and 2000 Censuses. In Census 2000, staff living in institutions included those living in “agricultural workers’ dormitories,” “other workers’ dormitories,” “Job Corps and vocational training facilities,” “dormitories for nurses and interns in military hospitals,” and “dormitories for nurses and interns in general hospitals.” In the 2010 Census, all these groups are categorized as “workers’ group living quarters and Job Corps centers.”

Noninstitutional group quarters—In the 1990 Census, the Census Bureau used the phrase “other persons in group quarters” for people living in noninstitutionalized group quarters. In 2000, this group was referred to for the first time as the “noninstitutionalized population.” In 2010, this population continues

to be referred to as the noninstitutionalized population. Noninstitutional group quarters are facilities that house those who are primarily eligible, able, or likely to participate in the labor force while a resident.

As of Census 2000, the Census Bureau dropped the rule of classifying ten or more unrelated people living together as living in noninstitutional group quarters. This rule was used in the 1990 and 1980 Censuses. In the 1970 Census, the criteria was six or more unrelated people.

College/University student housing—In the 2010 Census, residence halls and dormitories, which house college and university students in a group living arrangement, may be owned, leased, or managed either by a college, university, or seminary or by a private entity or organization. In Census 2000, these types of facilities had to be owned by the college or university.

Military quarters—In 1960 data products, people in military barracks were shown only for men. Starting in 1970 and to the present, data are available for both men and women in military barracks. What were classified as “transient quarters for temporary residents (military or civilian)” in Census 2000 data products no longer include the civilian population, and the military residents are tabulated in “military quarters” in 2010 Census data products.

Other noninstitutional facilities—In the 2010 Census, “workers group living quarters and Job Corps centers” are comprised of the following Census 2000 group quarters types: “agriculture workers’ dormitories,” “other workers’ dormitories,” “Job Corps and vocational training facilities,” and “dormitories for nurses and interns in hospitals (general and military).” As in Census 2000 and also in 1990, workers’ dormitories were classified as group quarters regardless of the number of people sharing the dormitory. In 1980, ten or more unrelated people had to share the dorm for it to be classified as a group quarters.

In the 2010 Census, “emergency and transitional shelters (with sleep facilities) for people experiencing homelessness” includes the Census 2000 categories “emergency and transitional shelters” and “shelters for children who are runaways, neglected, or without conventional housing.”

In the 2010 Census, “religious group quarters” are combined with “shelters for abused women (or shelters against domestic violence)” to make the category “religious group quarters and domestic violence shelters.”

In the 2010 Census data products, the category “group homes intended for adults (non-correctional)” consists of the following group quarters types (as listed in Census 2000): “homes for the mentally ill,” “homes for the mentally retarded,” “homes for the physically handicapped,” “residential care facilities providing protective oversight,” and “other group homes.” “Homes or halfway houses for drug/alcohol abuse” are categorized as “residential treatment centers for adults (non-correctional).”

The following group quarters types that were included in Census 2000 are no longer classified as group quarters in the 2010 Census: “military hotels/campgrounds,” “transient locations,” and “other household living situations ‘–dangerous encampments.’”

Like in Census 2000, rooming and boarding houses are classified as housing units in the 2010 Census. In the 1990 Census, these were considered group quarters.

Housing Units

A housing unit is a living quarters in which the occupant or occupants live separately from any other individuals in the building and have direct access to their living quarters from outside the building or through a common hall. Housing units are usually houses, apartments, mobile homes, groups of rooms, or single rooms that are occupied as separate living quarters. They are residences for single individuals, groups of individuals, or families who live together. A single individual or a group living in a housing unit is defined to be a household. Additional details about housing for the elderly population and group homes are provided in the section “Housing for the Older Population.”

For vacant housing units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. Nontraditional living quarters such as boats, RVs, and tents are considered to be housing units **only** if someone is living in them and they are either the occupant's usual residence or the occupant has no usual residence elsewhere. These nontraditional living arrangements are not considered to be housing units if they are vacant.

Housing units are classified as being either occupied or vacant.

Occupied Housing Unit—A housing unit is classified as occupied if it is the usual place of residence of the individual or group of individuals living in it on Census Day, or if the occupants are only temporarily absent, such as away on vacation, in the hospital for a short stay, or on a business trip, and will be returning.

The occupants may be an individual, a single family, two or more families living together, or any other group of related or unrelated individuals who share living arrangements.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, occupied by individuals who consider the hotel their usual place of residence or who have no usual place of residence elsewhere. However, when rooms in hotels and motels are used to provide shelter for people experiencing homelessness, they are not housing units. Rooms used in this way are considered group quarters.

Vacant Housing Unit—A housing unit is classified as vacant if no one is living in it on Census Day, unless its occupant or occupants are only temporarily absent—such as away on vacation, in the hospital for a short stay, or on a business trip—and will be returning.

Housing units temporarily occupied at the time of enumeration entirely by individuals who have a usual residence elsewhere are classified as vacant. When housing units are vacant, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Boats, RVs, tents, caves, and similar shelter that no one is using as a usual residence are **not** considered living quarters and therefore are not enumerated at all.

Housing for the Older Population—Housing specifically for the older population has become more and more prevalent and is being identified by many different names. Living quarters in these facilities, unless they meet the definition of skilled nursing facilities, are housing units, with each resident's living quarters considered a separate housing unit if it meets the housing unit definition of direct access. These residential facilities may be referred to as senior apartments, active adult communities, congregate care, continuing care retirement communities, independent living, board and care, or assisted living. People may have to meet certain criteria to be able to live in these facilities, but once accepted as residents they have unrestricted access to and from their units to the outside.

Housing units and group quarters may coexist under the same entity or organization and in some situations, actually share the same structure. An assisted living facility complex may have a skilled nursing floor or wing that meets the definition of a nursing facility and is, therefore, a group quarters, while the rest of the living quarters in the facility are considered to be housing units. Congregate care facilities and continuing care retirement communities often consist of several different types of living quarters, with varying services and levels of care. Some of the living quarters in these facilities and communities are considered to be housing units and some are considered to be group quarters, depending on which definition they meet.

Comparability—The first Census of Housing in 1940 established the “dwelling unit” concept. Although the term became “housing unit” and the definition was modified slightly in succeeding censuses, the housing unit definition remained essentially comparable between 1940 and 1990. Since 1990, two changes were made to the housing unit definition.

The first change eliminated the concept of “eating separately.” The elimination of the eating criterion is more in keeping with the United Nations’ definition of a housing unit that stresses the entire concept of separateness rather than the specific “eating” element. Although the “eating separately” criterion previously was included in the definition of a housing unit, the data needed to distinguish whether the occupants ate separately from any other people in the building were not collected. (Questions that asked households about their eating arrangements have not been included in the census since 1970.) Therefore, the current definition better reflects the information that is used in the determination of a housing unit.

The second change for Census 2000 and the 2010 Census eliminated the “number of nonrelatives” criterion; that is, “9 or more people unrelated to the householder” which caused a conversion of housing units to group quarters. This change was prompted by the following considerations: 1) there were relatively few such conversions made as a result of this rule in 1990; 2) household relationship and housing data were lost by converting these units to group quarters; and 3) there was no empirical support for establishing a particular number of nonrelatives as a threshold for these conversions.

In 1960, 1970, and 1980, vacant rooms in hotels, motels, and other similar places where 75 percent or more of the accommodations were occupied by permanent residents were counted as part of the housing inventory. However, an evaluation of the data collection procedures prior to the 1990 Census indicated that the concept of permanency was a difficult and confusing procedure for enumerators to apply correctly. Consequently, in the 1990 Census, vacant rooms in hotels, motels, and similar places were not counted as housing units. In Census 2000 and the 2010 Census, we continued the procedure adopted in 1990.

HOUSING CHARACTERISTICS

Household Size

This question is based on the count of people in occupied housing units. All people occupying the housing unit are counted, including the householder, occupants related to the householder, and lodgers, roomers, boarders, and so forth.

Average Household Size of Occupied Unit—The average household size of an occupied unit is a measure obtained by dividing the number of people living in occupied housing units by the total number of occupied housing units. This measure is rounded to the nearest hundredth.

Average Household Size of Owner-Occupied Unit—The average household size of an owner-occupied unit is a measure obtained by dividing the number of people living in owner-occupied housing units by the total number of owner-occupied housing units. This measure is rounded to the nearest hundredth.

Average Household Size of Renter-Occupied Unit—The average household size of a renter-occupied unit is a measure obtained by dividing the number of people living in renter-occupied housing units by the total number of renter-occupied housing units. This measure is rounded to the nearest hundredth.

Tenure

Tenure was asked at all occupied housing units. All occupied housing units are classified as either owner occupied or renter occupied.

Owner Occupied—A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for. The owner or co-owner must live in the unit and usually is Person 1 on the questionnaire. The unit is “Owned by you or someone in this household with a mortgage or loan” if it is being purchased with a mortgage or some other debt arrangement, such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The unit is also considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit.

A housing unit is “Owned by you or someone in this household free and clear (without a mortgage or loan)” if there is no mortgage or other similar debt on the house, apartment, or mobile home, including

units built on leased land if the unit is owned outright without a mortgage. Although most tables show total owner-occupied counts, selected tables separately identify the two owner categories.

Renter Occupied—All occupied housing units which are not owner occupied, whether they are rented or occupied without payment of rent, are classified as renter-occupied. “Rented” includes units in continuing care, sometimes called life care arrangements. These arrangements usually involve a contract between one or more individuals and a service provider guaranteeing the individual shelter, usually an apartment, and services, such as meals or transportation to shopping or recreation. The “no rent paid” category includes units provided free by friends or relatives or in exchange for services, such as a resident manager, caretaker, minister, or tenant farmer. Housing units on military bases are also classified in the “No rent paid” category.

Comparability—Data on tenure have been collected since 1890. In 1990, the response categories were expanded to allow the respondent to report whether the unit was owned with a mortgage or loan, or free and clear (without a mortgage). The distinction between units owned with a mortgage and units owned free and clear was added in 1990 to improve the count of owner-occupied units. Research after the 1980 Census indicated some respondents did not consider their units owned if they had a mortgage. In Census 2000, we continued with the same tenure categories used in the 1990 Census. In 2010, the instruction “Include home equity loans” was added following the response category “Owned by you or someone in this household with a mortgage or loan?” Additional changes included revising the wording of two response categories from “Rented for cash rent?” to “Rented?” and “Occupied without payment of cash rent?” to “Occupied without payment of rent?”

Vacancy Status

The data on vacancy status were obtained from Enumerator Questionnaire item C. Vacancy status and other characteristics of vacant units were determined by census enumerators obtaining information from landlords, owners, neighbors, rental agents, and others. Vacant units are subdivided according to their housing market classification as follows:

For Rent—These are vacant units offered “for rent” and vacant units offered either “for rent” or “for sale.”

Rented, Not Occupied—These are vacant units rented but not yet occupied, including units where money has been paid or agreed upon, but the renter has not yet moved in.

For Sale Only—These are vacant units being offered “for sale only,” including units in cooperatives and condominium projects if the individual units are offered “for sale only.” If units are offered either “for rent” or “for sale,” they are included in the “for rent” classification.

Sold, Not Occupied—These are vacant units sold but not yet occupied, including units that have been sold recently, but the new owner has not yet moved in.

For Seasonal, Recreational, or Occasional Use—These are vacant units used or intended for use only in certain seasons or for weekends or other occasional use throughout the year. Seasonal units include those used for summer or winter sports or recreation, such as beach cottages and hunting cabins. Seasonal units also may include quarters for such workers as herders and loggers. Interval ownership units, sometimes called shared-ownership or time-sharing condominiums, also are included here.

For Migrant Workers—These include vacant units intended for occupancy by migratory workers employed in farm work during the crop season. (Work in a cannery, freezer plant, or food-processing plant is not farm work.)

Other Vacant—If a vacant unit does not fall into any of the categories specified above, it is classified as “Other vacant.” For example, this category includes units held for occupancy by a caretaker or janitor and units held for personal reasons of the owner.

Homeowner Vacancy Rate—The homeowner vacancy rate is the proportion of the homeowner inventory that is vacant “for sale.” It is computed by dividing the number of vacant units “for sale only” by the sum of the owner-occupied units, vacant units that are “for sale only,” and vacant units that have been sold but not yet occupied, and then multiplying by 100. This measure is rounded to the nearest tenth.

Rental Vacancy Rate—The rental vacancy rate is the proportion of the rental inventory that is vacant “for rent.” It is computed by dividing the number of vacant units “for rent” by the sum of the renter-occupied units, vacant units that are “for rent,” and vacant units that have been rented but not yet occupied, and then multiplying by 100. This measure is rounded to the nearest tenth.

Available Housing Vacancy Rate—The available housing vacancy rate is the proportion of the housing inventory that is vacant-for-sale only and vacant-for-rent. It is computed by dividing the sum of vacant-for-sale-only housing units and vacant-for-rent housing units, by the sum of occupied units, vacant-for-sale-only housing units, vacant-sold-not-occupied housing units, vacant-for-rent housing units, and vacant-rented-not-occupied housing units, and then multiplying by 100. This measure is rounded to the nearest tenth.

Comparability—Data on vacancy status have been collected since 1940. Since 1990, we have used the category “For seasonal, recreational, or occasional use.” In earlier censuses, separate categories were used to collect data on these types of vacant units. Also, in 1970 and 1980, housing characteristics generally were presented only for year-round units. Beginning in 1990 and continuing into Census 2000, housing characteristics are shown for all housing units. Census 2000 used a single vacancy status category for units that were either “Rented or sold, not occupied.” In 2010, we used two separate categories “Rented, not occupied” and “Sold, not occupied.” This change provided consistency with the American Community Survey and the Housing Vacancy Survey. These revised categories were incorporated in the calculations of the homeowner vacancy, rental vacancy, and the available housing vacancy rates.

DERIVED MEASURES

Census data products include various derived measures, such as medians, means, and percentages, as well as certain rates and ratios. Derived measures that round to less than 0.1 are not shown but indicated as zero.

Area Measurement and Density

The 2010 Census summary file geographic header record provides the size, in square meters, of geographic entities for which the U.S. Census Bureau tabulates and disseminates data. Land area is shown in Field Name AREALAND (starting position 199) and water area in Field Name AREAWATR (starting position 213). To convert square meters to square kilometers, divide by 1,000,000; to convert square kilometers to square miles, divide by 2.589988; to convert square meters to square miles, divide by 2,589,988.

Population density (average number of people per square mile) is calculated by dividing the number of people in a specified geographic area by its land area in square miles.

Housing unit density (average number of housing units per square mile) is calculated by dividing the number of housing units in a specified geographic area by its land area in square miles.

Average

See [“Mean.”](#)

Interpolation

Interpolation is frequently used to calculate medians or quartiles and to approximate standard errors from tables based on interval data. Different kinds of interpolation may be used to estimate the value of a function between two known values, depending on the form of the distribution. The most common distributional assumption is that the data are linear, resulting in linear interpolation.

Mean

This measure represents an arithmetic average of a set of values. It is derived by dividing the sum (or aggregate) of a group of numerical items by the total number of items in that group. For example, average family size is obtained by dividing the number of people in families by the total number of families (or family householders). (Additional information on means and aggregates is included in the separate explanations of many of the population and housing subjects.)

Median

This measure represents the middle value (if n is odd) or the average of the two middle values (if n is even) in an ordered list of n data values. The median divides the total frequency distribution into two equal parts: one-half of the cases falling below the median and one-half above the median. Each median is calculated using a standard distribution. The standard distribution for the calculation of median age is:

Age [116]

Under 1 year
1 year
2 years
3 years
4 years
5 years
.
.
.
112 years
113 years
114 years
115 years and over

(For more information, see [“Interpolation.”](#))

Jam values will be assigned whenever the median falls in an open-ended interval. For example, if the median age value fell in the open-ended category 115 years and over, the value displayed would be 115+. The presentation of jam values will vary between products and types of media.

For data products displayed in American FactFinder, publications, or in display table format, medians that fall in the upper-most category of an open-ended distribution will be shown with a plus symbol (+) appended, and medians that fall in the lowest category of an open-ended distribution will be shown with a minus symbol (–) appended. For other data products and data files that are downloaded by users (i.e., FTP files), plus and minus signs will not be appended.

Percentage

This measure is calculated by taking the number of items in a group possessing a characteristic of interest and dividing by the total number of items in that group, and then multiplying by 100.

Rate

This is a measure of occurrences in a given period of time divided by the possible number of occurrences during that period. For example, the homeowner vacancy rate is calculated by dividing the number of vacant units “for sale only” by the sum of owner-occupied units, vacant units that are “for sale only,” and vacant units that have been sold but not yet occupied, and then multiplying by 100. Rates are sometimes presented as percentages.

2010 CENSUS MISSION AND SCOPE

Beginning with the Congressional Act of March 6, 1902, the U.S. Census Bureau was legally established as the “official” data collector for the United States of America. The Census Bureau routinely conducts multiple national, large-scale household surveys and censuses to provide the Administration; Congress; state, local, and tribal planners; the business community; trade associations; academicians; and other data users with a vast array of essential information. Most notable is the every 10-year (decennial) census of population and housing.

This section provides an overview of operations and systems in the 2010 Census of Population and Housing. To assist in understanding terms in the descriptions of many operations or to learn more about the 2010 Census, please refer to <www.2010census.gov> or the official 2010 Census glossary of acronyms, where detailed definitions of terms and acronyms can be found at <www.census.gov/dmd/www/glossary.html>. Thumbnail descriptions are found in this section as well as the operational timeline for the operations and the contact information for the 12 regional offices.

The mission, upon which we define the requirements and build the systems, is “the 2010 Census will conduct a census of population and housing, and disseminate the data to the President, the States, and to the American people.” The scope of the 2010 Census is as follows:

- The 2010 Census shall cover the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, the Commonwealth of the Northern Mariana Islands, Guam, the Pacific Island Area of American Samoa, and Federally Affiliated Americans overseas.
- The Census Day for the 2010 Census shall be April 1, 2010; have a boundary reference date of January 1, 2010; and deliver apportionment counts to the President by December 31, 2010, and redistricting counts to the states by April 1, 2011.
- The 2010 Census concludes upon delivery of all products and the subsequent headquarters closeout activities ending September 30, 2013.

The focus of this section is the 2010 Census. It does not include descriptions of the American Community Survey or the Master Address File/Topographically Integrated Geographic Encoding and Referencing (MAF/TIGER®) database Enhancement Program. It should also be noted that from a strategy and

operational perspective, Puerto Rico is treated the same as the 50 States and the District of Columbia, with the exception of language (Spanish) and minor program modifications.

SIX OPERATIONAL PLANNING CATEGORIES

The forty-four 2010 Census operations and operation groups are categorized into 1 of the 6 categories based on the similarity of their missions. High-level descriptions of the operational planning categories are:

1. **Provide Support**—This category is concerned with supporting operations of the 2010 Census through the organization and operation of the census business processes that make the census mission possible. Activities include operational support, planning and management support, as well as infrastructure support and system design, development, and testing.
2. **Establish Where to Count**—This category is concerned with gathering and compiling the needed inputs to ensure the completeness of the geographic and address data that make up the framework for the census, as well as establishing the respondent data collection universe for the census itself. These activities provide the basis for the work done to collect respondent information.
3. **Collect and Integrate Respondent Information**—This category is concerned with the actual collection of census respondent information as derived through processing completed census forms delivered by the U.S. Postal Service or gathered through field enumeration activities.
4. **Provide Census Results**—This category is concerned with the refinement of collected census response data and dissemination of census results. Response data collected from census forms processing and field enumeration are refined and edited to produce an accurate count with complete data characteristics. These counts with characteristic data are then summarized, which removes personally identifiable information. A wide array of census products are then produced and disseminated.
5. **Measure Census Coverage**—This category includes coverage measurement operations that are separate from and independent of the census operations. They are designed to provide estimates of net coverage error and omissions and erroneous enumerations for persons in housing units and for the housing units themselves. These activities provide the needed inputs, which allow census coverage to be measured.
6. **Analyze and Research the Census**—This category includes 2010 Census assessments, evaluations, and experiments. Assessments are used to document final volumes and rates for individual operations or processes, using data from production files and activities; quality control files and activities; and information collected from debriefings and lessons learned. Evaluations analyze the outcomes of pre-specified census operations, such as the effectiveness of integrated communications. Experiments are studies that occur during the census to learn about new or different methodologies which inform the 2020 Census design.

1. Provide Support

The Provide Support operational planning category includes the operations that sustain the 2010 Census through activities that allow the data collection operations to run smoothly and efficiently. These activities include planning and management support, security, public communications, language translation, materials support, infrastructure support, and management of system design, development, and deployment.

1. **2010 Census Management Operations**—Responsible for the planning and implementation of all 2010 Census operations.

-
2. **Content and Forms Design Operation**—Responsible for the design and content of questionnaires and other materials in order to generate high and consistent response rates across all 2010 Census operations.
 3. **Security, Privacy, and Confidentiality Operations**—Ensures that all 2010 Census operations adhere to the appropriate security, privacy, and confidentiality policies and regulations.
 4. **Field Infrastructure Support Operations**—Supports all 2010 Census field data collection operations through staffing, office space and computing infrastructure deployment and support, and supply and material distribution.
 5. **Language Services Operations**—Supports the language needs of the 2010 Census operations by translating materials to the over 40 languages targeted for 2010 Census.
 6. **Integrated Communications Services Operation**—Responsible for educating, creating awareness and motivating persons to participate by responding to the 2010 Census.

2. Establish Where to Count

The Establish Where to Count operational planning category includes the operations that perform activities to gather and compile the geographic and address data that make up the framework for the 2010 Census. This includes activities that create and manage the respondent data collection universes for the census data collection operations.

7. **Geographic Updating and Delineation Operation**—Determines, delineates, and updates the geographic area boundaries for data collection.
8. **Administrative Records Updating Operation**—Uses administrative records sources from the U.S. Postal Service (USPS), local governments, and independent organizations to ensure the address list is as complete as possible.
9. **Local Update of Census Addresses (LUCA) Operation**—Provides the opportunity for tribal, state, and local governments to review and comment on the Census Bureau's address list to ensure an accurate and complete enumeration of their communities.
10. **New Construction Operation**—Provides the opportunity for tribal and local governments to report newly constructed living quarters in the enumeration areas where the Census Bureau delivers questionnaires using the USPS.
11. **Address Canvassing Field Operation**—Collects updated living quarters addresses, geographic features, and spatial information, including the verified LUCA updates.
12. **Group Quarters Validation Field Operation**—Classifies "Other Living Quarters" as a group quarters or non-group quarters, then assigns a group quarters type code which will be utilized by other operations.
13. **Update/Leave Operation**—For geographic areas where mail delivery problems are anticipated, Update/Leave field operations hand deliver questionnaires to housing units and update address lists and maps if inconsistencies are found.
14. **Field Verification Field Operation**—Verifies the existence of respondent-provided housing unit addresses that have not been confirmed by a Census Bureau employee and also verifies potential duplicate housing units identified in Response Processing.
15. **Non-ID Processing Operation**—Associates census identification numbers with completed respondent-generated questionnaires that do not have a preassigned census identification number but have a respondent-provided address.

-
16. **Geographic Data Processing Production (GDP) Operation**—Maintains the MAF/TIGER® system, which is the repository for spatial and address data, and provides spatial and address products for 2010 Census operations.
 17. **Universe Control and Management Production Operation**—Creates and manages the respondent data collection universes for census data collection operations using a database of GDP-provided census addresses and related information.

3. Collect and Integrate Respondent Information

The Collect and Integrate Respondent Information operational planning category includes the operations that collect census respondent information through processing completed census forms delivered by the USPS or gathered through field enumeration activities.

18. **Forms Printing and Distribution Operation**—Prints all public-use forms and other materials to support the 2010 Census, including the 2010 Census questionnaire mailed to housing units on March 15, 2010.
19. **Update Enumerate Operation**—Updates the address list and enumerates the housing units in certain designated geographic areas with special enumeration needs. This group includes the Remote Update Enumeration and Remote Alaska operations.
20. **Enumeration at Transitory Locations Field Operation**—Enumerates individuals that do not have a usual home elsewhere (UHE) at housing units at transitory locations.
21. **Be Counted/Questionnaire Assistance Center Operation**—Provides community outreach in hard to enumerate (HTE) areas to assist persons in completing their census questionnaire.
22. **Invalid Return Detection Operation**—Detects potentially fraudulent returns.
23. **Nonreponse Operation**—Enumerates all housing units that did not respond to the mailed out census questionnaire.
24. **Coverage Follow-Up Operation**—A telephone operation that resolves erroneous enumerations and omissions detected from other enumeration operations.
25. **Group Quarters Operation**—Establishes contacts and enumerates individuals at Group Quarters locations. This operation group includes both Group Quarters Advance Visit and Group Quarters Enumeration (which itself includes Service-Based Enumeration, Military Group Enumeration, and Domestic Military/Maritime Vessels Enumeration operations).
26. **Island Areas Enumeration Operation**—Lists all residential and other living quarters and enumerates these units in American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands.
27. **Federally Affiliated Americans Overseas Count Operation**—Obtains counts of U.S. military and federal civilian employees stationed overseas and their dependents living with them that can be allocated to a home state for the purposes of reapportioning seats in the U.S. House of Representatives.
28. **Telephone Questionnaire Assistance and Fulfillment Operation**—Provides assistance over the phone to 2010 Census callers.
29. **Data Capture and Integration (DCI) Operation**—Provides a means to capture both questionnaire data and geographic data from data collection operations and integrates them into a common set of formats for further processing.

4. Provide Census Results

The Provide Census Results operational planning category is concerned with the refinement of the collected census response data and dissemination of census results. Response data collected from census forms processing and field enumeration are refined and edited to produce an accurate count with complete data characteristics. These counts with characteristic data are then summarized, which removes personally identifiable information. A wide array of census products are then produced and disseminated.

- 30. **Geographic Boundary and Districting Operation**—Determines and updates the geographic area boundaries for districting and tabulation.
- 31. **Response Processing Production Operation**—Processes integrated response data provided by the DCI operation to unduplicate responses, ensure that complete information is collected, conduct statistical methods, and format data files used to produce census results.
- 32. **Count Review Operation**—Designed to enhance the accuracy of the census and provides the Federal-State Cooperative Program for Population Estimates (FSCPE) with the opportunity to review and provide feedback on count tabulations prior to the release of Public Law 94-171 data.
- 33. **Data Products and Dissemination Production (DPD) Operation**—Tabulates and disseminates 2010 Census products, including apportionment counts and Public Law 94-171 redistricting data. The DPD produces many data products, including state and national summary files, tabulated informational files, and data comparison tables. The DPD is responsible for printed and electronic informational products that include population and housing unit tabulations, geographical maps, and a number of data products that specifically pertain to the island areas.

The Data Access and Dissemination System (DADS) program is the primary provider of dissemination services via the Internet through the American FactFinder (AFF) system. This system was redesigned and enhanced for the 2010 Census and for dissemination of other Census Bureau data products. The DADS program is also the provider of tabulation services for the decennial census. Tabulation services refer to the activities related to aggregating data collected on individual responses to a survey or census into summarized statistical data suitable for public release. Dissemination services refer to the activities related to the internal staging and release of approved statistics for posting on the Internet. These services include the provision of interim results or output so that other areas of the Census Bureau can process and release data in different media and formats, (e.g., CD-ROM, DVD, File Transfer Protocol [FTP], Adobe Acrobat Portable Document Format [PDF] for printed publications).

- 34. **Archiving Operation**—Provides 2010 Census records to the National Archives and Records Administration (NARA).

5. Measure Census Coverage

The Measure Census Coverage operational planning category includes coverage measurement operations that are separate from and independent of the census operations. They are designed to provide estimates of net coverage error and omissions and erroneous enumerations for persons in housing units and for the housing units themselves. These activities provide the needed inputs that allow census coverage to be measured. This planning category consists of the Census Coverage Measurement (CCM) program and the Demographic Analysis operation.

The focus of the CCM program is to measure the coverage error in the 2010 Census with the goal of improving future census operations. CCM produces estimates of net coverage error and estimates of the coverage error components for both housing units and persons living in housing units. Components of coverage error include omissions and erroneous enumerations (including duplicates). Measuring the coverage error of persons in group quarters and of group quarters facilities is not within the scope of the

CCM program. The CCM is a sample survey and, as is typical, is conducted separately and independently of the census operations to ensure that the coverage error estimates are unbiased.

35. **CCM Sample Design Operation**—Designs and implements the sample to support the estimation of coverage errors in the 2010 Census for the United States and Puerto Rico, excluding remote Alaska.
36. **CCM Independent Listing Field Operation**—Creates the list of CCM addresses by canvassing the selected sample block cluster areas using a paper instrument called the CCM Independent Listing Book (ILB).
37. **CCM Initial Housing Unit Matching and Follow-Up Operation**—Determines the reasons for differences between the housing unit addresses in the CCM sample and the initial census address list using automated computer matching, clerical matching, and in-person follow-up techniques.
38. **CCM Person Interview Field Operation**—Collects person and housing unit information for selected housing units in each sample block cluster by performing in-person interviews using a computer-assisted data collection instrument.
39. **CCM Person Matching and Follow-Up Operation**—Determines the reasons for the differences between the persons in the CCM sample and the persons in the 2010 Census using automated computer matching, clerical matching, telephone and in-person follow-up techniques.
40. **CCM Final Housing Unit Matching and Follow-Up Operation**—Determines the reasons for the differences between the housing unit addresses in the CCM sample and the final 2010 Census address list using automated computer matching, clerical matching, and in-person follow-up techniques.
41. **CCM Estimation Operation**—Produces estimates of net coverage error and the components of coverage error for housing units and persons living in housing units in the United States and Puerto Rico, excluding remote Alaska.
42. **Demographic Analysis Operation**—Produces independent assessments of census coverage using population and housing unit benchmarks in support of the 2010 Census and the evaluation of 2010 Census results.

6. Analyze and Research the Census

The Analyze and Research the Census operational planning category includes 2010 Census assessments, evaluations, and experiments. Assessments are used to document final volumes and rates for individual operations or processes, using data from production files and activities; quality control files and activities; and information collected from debriefings and lessons learned. Evaluations analyze the outcomes of prespecified census operations, such as the effectiveness of integrated communications. Experiments are studies that occur during the census to learn about new or different methodologies, which inform the 2020 Census design.

43. **Evaluations, Experiments, and Assessments Operation**—Includes all of the analyses of the design and operations of the 2010 Census, as well as experimental design changes that could inform the 2020 Census. Evaluations and assessments are performed and experiments are conducted to analyze the 2010 Census and to inform early research in the 2020 Census test cycle.
44. **Count Question Resolution Operation**—Conducts an administrative review to handle external challenges to official 2010 Census counts of housing units and group quarters and their associated population.

THUMBNAIL DESCRIPTIONS OF 2010 CENSUS OPERATIONS

Address Canvassing—A field operation where census workers systematically canvass all census blocks looking for living quarters and updating the address and map information on a hand-held computer.

Be Counted Program—A program designed for persons who believe they were not counted in the 2010 Census. The Census Bureau will place unaddressed census questionnaires at selected public sites so that individuals that did not receive one in the mail can complete the census.

Census Coverage Follow-Up—A census operation designed to ensure that no person is left out or counted in more than one place in the census and to clarify responses previously collected to improve the accuracy of the census.

Census Coverage Measurement (CCM) Final Housing Unit Follow-Up—A coverage measurement field operation designed to gather additional information to determine reasons for differences between the Independent Listing operation and census records.

Census Coverage Measurement (CCM) Independent Listing Operation—A coverage measurement field operation to construct a list of all housing units, independent of the census, contained within select CCM block clusters.

Census Coverage Measurement (CCM) Initial Housing Unit Follow-Up—A coverage measurement field operation designed to gather information to determine reasons for differences between the Independent Listing operation results and the preliminary census address file.

Census Coverage Measurement (CCM) Person Follow-Up—A coverage measurement field operation designed to collect additional information about persons or households to determine reasons for differences between the CCM Person Interview and the census enumeration.

Census Coverage Measurement (CCM) Person Interview—A coverage measurement field operation designed to collect information about the current resident(s) of each sample housing unit and certain persons who had moved out of the sample address between Census Day and the time of the CCM Person Interview.

Enumeration at Transitory Locations—A census operation where census workers conduct a personal interview with individuals who do not have a usual home elsewhere.

Field Verification—A census operation where census workers verify the existence of units that had been geocoded to a census block but did not match an address in the Master Address File.

Group Quarters Advance Visit—A census operation designed to inform the group quarters contact person of the upcoming enumeration.

Group Quarters Enumeration—A census operation designed to count people living or staying in places such as college residence halls, skilled-nursing facilities, group homes, military barracks, and correctional facilities.

Group Quarters Validation—A census operation designed to determine the correct classification of addresses identified as “other living quarters” during the address canvassing operation.

Mailout/Mailback—A census operation where most households in the United States will be mailed a census questionnaire by the U.S. Postal Service. Household respondents will be asked to fill out the questionnaires and mail them back to data capture centers.

Military Group Quarters Enumeration—A part of the Group Quarters Enumeration operation conducted on military bases and carried out in coordination with the military base point of contact to count military personnel.

Military/Maritime Vessel Enumeration—A part of the Group Quarters operation conducted to enumerate persons on U.S. owned and operated flagged military and maritime vessels.

Nonresponse Follow-Up—A census operation where census workers visit housing units that did not return a completed questionnaire by mail to conduct a personal interview to obtain the required information.

Nonresponse Follow-Up Reinterview—A quality check operation designed to ensure that the production enumerator followed field procedures and to identify enumerators who intentionally or unintentionally produced data errors so that work can be redone.

Questionnaire Assistance Center—A center established by a local census office to assist people with completing their questionnaires. The centers were established in community centers, large apartment buildings, childcare and educational centers, and so forth. The centers are staffed by volunteers and Census Bureau employees; also called walk-in questionnaire assistance centers.

Remote Alaska—A method of data collection used to enumerate the most sparsely settled, isolated parts of Alaska—areas accessible only by small plane, boat, snowmobile, 4-wheel-drive vehicle, dog sled, or a combination of these.

Remote Update/Enumerate—A method of data collection conducted with a “team enumeration” method in sparsely inhabited areas of Maine and Alaska, where all enumeration is completed in just one visit.

Service-Based Enumeration—A group quarters operation designed to enumerate persons receiving services at shelters, soup kitchens, regularly scheduled mobile food vans, and those staying at preidentified nonsheltered outdoor locations.

Telephone Questionnaire Assistance—A customer service operation assisting respondents who call in to inquire about census activities going on in their neighborhood or who want to obtain clarification to questions on the census questionnaire or who request to fill out the form through an interview over the phone.

Update/Enumerate—A method of data collection conducted only in communities determined by local census officials where continually low response rates have been established from previous censuses or ongoing survey efforts, and mailing or hand-delivering forms is not cost beneficial. Enumeration is done by census takers who personally interview each household to collect information and update census address lists and maps at the same time.

Update/Leave—A census operation where census workers update paper versions of census address lists and maps and leave questionnaires at housing units in mainly rural areas without street names and/or house numbers. Household respondents are expected to fill out the questionnaires and mail them to data capture centers.

Vacant Delete Check—A census operation where census workers visit addresses that workers recorded in Nonresponse Follow-Up as either vacant or not a housing unit on Census Day, April 1.

TIMELINE OF 2010 CENSUS OPERATIONS

Operation	Conducted
Address Canvassing	April 6, 2009–July 19, 2009
CCM Independent Listing Operation	August 28, 2009–December 5, 2009
Group Quarters Validation	September 28, 2009–October 23, 2009
Remote Alaska	January 22, 2010–May 5, 2010
Group Quarters Advance Visit	February 1, 2010–March 19, 2010
Telephone Questionnaire Assistance	February 25, 2010–July 30, 2010
Questionnaire Assistance Centers	February 26, 2010–April 19, 2010
Update/Leave	March 1, 2010–April 2, 2010
CCM Initial Housing Unit Follow-Up	March 4, 2010–April 23, 2010
Mailout/Mailback	March 15, 2010–September 30, 2010
Be Counted Program	March 19, 2010–April 19, 2010
Update/Enumerate	March 22, 2010–May 29, 2010
Enumeration at Transitory Locations	March 22, 2010–April 16, 2010
Remote Update Enumerate	March 22, 2010–May 29, 2010

2010 Census—School District Reference Map	E-2

INTRODUCTION

There are three large format map types that support the 2010 Census Summary File 2 Data Release. Each of these map types are produced in Adobe's portable document format (PDF). These georeferenced PDF files are available through the U.S. Census Bureau's Web site. In addition to the maps, other geographic products include the TIGER/Line® Shapefiles, Census Block Relationship files, Census Tract Relationship files, and other Geographic Entity information.

MAP DESCRIPTIONS

2010 Census—Census Block Map

The 2010 Census Block Map Series, also referred to as the Geographic Unit (GU) block maps, is produced to support the 2010 Decennial Census data release. These maps display tabulation geography down to the census block level. The 2010 Census Block Maps are produced for the following entities: counties and statistically equivalent entities, minor civil divisions (MCDs), census county divisions (CCDs) and statistically equivalent entities, incorporated places, census designated places (CDPs), consolidated cities, sub-MCDs, federal American Indian reservations, state American Indian reservations, Oklahoma tribal statistical areas (OTSAs), Alaska Native village statistical areas (ANVSAs), tribal designated statistical areas (TDSAs), state designated tribal statistical areas (SDTSAs), tribal subdivisions, and Hawaiian home lands (HHLs).

These large-scale maps show the boundaries and numbers for all census blocks within an entity. In addition to state and county, these maps show the boundaries, names and codes for American Indian areas, Alaska Native areas, Hawaiian home lands, county subdivisions, places, and census tracts. These maps also show and label base features, such as roads, railroads, and hydrography. The intent of this series is to show each entity on the fewest number of map sheets possible and at the maximum practical scale, depending on the size and shape of the entity and the density of the census blocks it contains. Census block density affects the display of the census blocks numbers and feature identifiers. Each entity is covered by one or more parent map sheets at a single scale. Inset map sheets at larger scales were created as required to show the map content described above. An index map showing the sheet configuration is included for all entities requiring more than one parent map sheet. The map sheet size is 36 x 32 inches.

Each map is accompanied by a Census Block to Map Sheet relationship file. These semicolon-delimited text files include a record for each census block within the entity, consisting of the corresponding state, county, census tract, and census block codes for the block and a list of all map sheet numbers that the block appears on for that map. When the map entity is a federal American Indian reservation or a tribal subdivision, the Census Block to Map Sheet relationship file also includes the related tribal census tract and tribal block group for each census block.

2010 Census—Census Tract Reference Map

These county-based reference maps show and label the census tracts as delineated to support 2010 Census data dissemination. These maps also show the boundaries and names of American Indian areas, Alaska Native areas, Hawaiian home lands, counties, county subdivisions, and places. Additionally, these maps display a base feature network including roads, railroads, and water bodies. These features are labeled as map scale permits. The map sheet configuration is optimized to keep the number of map sheets for each county to a minimum. Each county will be covered by one or more parent map sheets at a single scale. Inset map sheets at larger scales are created where there are clusters of census tracts that cannot be identified at the parent map scale. An index map showing the sheet configuration is created for all counties requiring more than one parent map sheet. The map sheet size is 36 by 32 inches.

2010 Census—School District Reference Map

These reference maps show and label the unified, secondary, and elementary school districts as delineated by the state participants of the School District Review Program. These county-based maps also show and label states, counties, and places. Additionally, these maps display a base feature network including roads and water bodies. Major highways and selected water bodies are labeled. Each county will be covered by one or more parent map sheets at a single scale. Inset map sheets at larger scales are created where there are clusters of school districts that cannot be identified at the parent map scale. An index map showing the sheet configuration is created for all counties requiring more than one parent map sheet. For states and state-equivalents, including the District of Columbia, Florida, Hawaii, Maryland, Nevada, and West Virginia, where school districts are coextensive with counties, a state-based map identifying the counties and corresponding school districts is produced. The map sheet size is 36 by 32 inches.

WHERE YOU ARE COUNTED IS IMPORTANT

For the 2010 Census, the U.S. Census Bureau is committed to counting every person. Just as important, however, is the Census Bureau's commitment to counting every person in the correct place. The fundamental reason the decennial census is conducted is to fulfill the constitutional requirement (Article I, Section 2) to apportion the seats in the U.S. House of Representatives among the states. Thus, for a fair and equitable apportionment, it is crucial that people are counted in the right place during the 2010 Census.

THE CONCEPT OF USUAL RESIDENCE

Planners of the first U.S. decennial census in 1790 established the concept of "usual residence" as the main principle in determining where people were to be counted. This concept has been followed in all subsequent censuses and is the guiding principle for the 2010 Census. Usual residence is defined as the place where a person lives and sleeps most of the time. This place is not necessarily the same as the person's voting residence or legal residence.

Determining usual residence is easy for most people. Given our nation's wide diversity in types of living arrangements, however, the usual residence for some people is not as apparent. A few examples are people experiencing homelessness, snowbirds, children in shared custody arrangements, college students, live-in employees, military personnel, and people who live in workers' dormitories.

Applying the usual residence concept to real living situations means that people will not always be counted at the place where they happen to be staying on Thursday, April 1, 2010 (Census Day). For example, people who are away from their usual residence while on vacation or on a business trip on Census Day should be counted at their usual residence. People who live at more than one residence during the week, month, or year should be counted at the place where they live most of the time. People without a usual residence, however, should be counted where they are staying on Census Day.

THE RESIDENCE RULE

The residence rule is used to determine where people should be counted in the United States during the 2010 Census. The rule says:

Count people at their usual residence, which is the place where they live and sleep most of the time.

People in certain types of facilities or shelters (i.e., places where groups of people live together) on Census Day should be counted at the facility or shelter.

People who do not have a usual residence, or cannot determine a usual residence, should be counted where they are on Census Day.

This residence rule also is used to determine where people are counted in the 2010 Census of Puerto Rico.

The following sections describe how the residence rule applies for people in various living situations.

PEOPLE AWAY FROM THEIR USUAL RESIDENCE ON CENSUS DAY

People away from their usual residence on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip, visiting, traveling outside the United States, or working elsewhere without a usual residence there (for example, as a truck driver or traveling salesperson)—Counted at the residence where they live and sleep most of the time.

VISITORS ON CENSUS DAY

Visitors on Thursday, April 1, 2010 (Census Day) who will return to their usual residence—Counted at the residence where they live and sleep most of the time.

Citizens of foreign countries who are visiting the United States on Thursday, April 1, 2010 (Census Day), such as on a vacation or a business trip—Not counted in the census.

PEOPLE WHO LIVE IN MORE THAN ONE PLACE

People living away most of the time while working, such as people who live at a residence close to where they work and return regularly to another residence—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if usual residence cannot be determined, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

People who live at two or more residences (during the week, month, or year), such as people who travel seasonally between residences (for example, snowbirds)—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if usual residence cannot be determined, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

Children in shared custody or other arrangements who live at more than one residence—Counted at the residence where they live and sleep most of the time. If time is equally divided, they are counted at the residence where they are staying on Thursday, April 1, 2010 (Census Day).

PEOPLE WITHOUT A USUAL RESIDENCE

People who cannot determine a usual residence—Counted where they are staying on Thursday, April 1, 2010 (Census Day).

People at soup kitchens and regularly scheduled mobile food vans—Counted at the residence where they live and sleep most of the time. If they do not have a place they live and sleep most of the time, they are counted at the soup kitchen or mobile food van location where they are on Thursday, April 1, 2010 (Census Day).

People at targeted non-sheltered outdoor locations—Counted at the outdoor location where people experiencing homelessness stay without paying.

STUDENTS

Boarding school students living away from their parental home while attending boarding school below the college level, including Bureau of Indian Affairs boarding schools—Counted at their parental home rather than at the boarding school.

College students living at their parental home while attending college—Counted at their parental home.

College students living away from their parental home while attending college in the United States (living either on-campus or off-campus)—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

College students living away from their parental home while attending college in the United States (living either on-campus or off-campus) but staying at their parental home while on break or vacation—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

U.S. college students living outside the United States while attending college outside the United States—Not counted in the census.

Foreign students living in the United States while attending college in the United States (living either on-campus or off-campus)—Counted at the on-campus or off-campus residence where they live and sleep most of the time.

MOVERS ON CENSUS DAY

People who move into a residence on Thursday, April 1, 2010 (Census Day) who have not been listed on a questionnaire for any residence—Counted at the residence they move into on Census Day.

People who move out of a residence on Thursday, April 1, 2010 (Census Day) and have not moved into a new residence on Thursday, April 1, 2010 (Census Day) and who have not been listed on a questionnaire for any residence—Counted at the residence from which they moved.

People who move out of a residence or move into a residence on Thursday, April 1, 2010 (Census Day) who have already been listed on a questionnaire for any residence—If they have already been listed on one questionnaire, do not list them on any other questionnaire.

PEOPLE WHO ARE BORN OR DIE ON CENSUS DAY

Babies born on or before 11:59:59 p.m. on Thursday, April 1, 2010 (Census Day)—Counted at the residence where they will live and sleep most of the time, even if they are still in the hospital on April 1, 2010 (Census Day).

Babies born after 11:59:59 p.m. on Thursday, April 1, 2010 (Census Day)—Not counted in the census.

People who die before Thursday, April 1, 2010 (Census Day)—Not counted in the census.

People who die on Thursday, April 1, 2010 (Census Day)—Counted in the census if they are alive at any time on April 1, 2010.

NONRELATIVES OF THE HOUSEHOLDER

Roomers or boarders—Counted at the residence where they live and sleep most of the time.

Housemates or roommates—Counted at the residence where they live and sleep most of the time.

Unmarried partners—Counted at the residence where they live and sleep most of the time.

Foster children or foster adults—Counted at the residence where they live and sleep most of the time.

Live-in employees, such as caregivers or domestic workers—Counted at the residence where they live and sleep most of the time.

U.S. MILITARY PERSONNEL

U.S. military personnel living in military barracks in the United States—Counted at the military barracks.

U.S. military personnel living in the United States (living either on base or off base) but not in barracks—Counted at the residence where they live and sleep most of the time.

U.S. military personnel on U.S. military vessels with a U.S. homeport—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel's homeport.

People in military disciplinary barracks and jails in the United States—Counted at the facility.

People in military treatment facilities with assigned active duty patients in the United States—Counted at the facility if they are assigned there.

U.S. military personnel living on or off a military installation outside the United States, including dependents living with them—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

U.S. military personnel on U.S. military vessels with a homeport outside the United States—Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

MERCHANT MARINE PERSONNEL ON U.S. FLAG MARITIME/MERCHANT VESSELS

Crews of U.S. flag maritime/merchant vessels docked in a U.S. port or sailing from one U.S. port to another U.S. port on Thursday, April 1, 2010 (Census Day)—Counted at the onshore U.S. residence where they live and sleep most of the time. If they have no onshore U.S. residence, they are counted at their vessel. If the vessel is docked in a U.S. port, crewmembers with no onshore U.S. residence are counted at the port. If the vessel is sailing from one U.S. port to another U.S. port, crewmembers with no onshore U.S. residence are counted at the port of departure.

Crews of U.S. flag maritime/merchant vessels engaged in U.S. inland waterway transportation on Thursday, April 1, 2010 (Census Day)—Counted at the onshore residence where they live and sleep most of the time.

Crews of U.S. flag maritime/merchant vessels docked in a foreign port, sailing from one foreign port to another foreign port, sailing from a U.S. port to a foreign port, or sailing from a foreign port to a U.S. port on Thursday, April 1, 2010 (Census Day)—Not counted in the census.

FOREIGN CITIZENS IN THE UNITED STATES

Citizens of foreign countries living in the United States—Counted at the U.S. residence where they live and sleep most of the time.

*Citizens of foreign countries living in the United States who are members of the diplomatic community—*Counted at the embassy, consulate, United Nations' facility, or other residences where diplomats live.

*Citizens of foreign countries visiting the United States, such as on a vacation or business trip—*Not counted in the census.

U.S. CITIZENS AND THEIR DEPENDENTS LIVING OUTSIDE THE UNITED STATES

*U.S. citizens living outside the United States who are employed as civilians by the U.S. government, including dependents living with them—*Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

*U.S. citizens living outside the United States who are not employed by the U.S. government, including dependents living with them—*Not counted in the census.

*U.S. military personnel living on or off a military installation outside the United States, including dependents living with them—*Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

*U.S. military personnel on U.S. military vessels with a homeport outside the United States—*Counted as part of the U.S. overseas population. They should not be included on any U.S. census questionnaire.

PEOPLE IN CORRECTIONAL FACILITIES FOR ADULTS

*People in correctional residential facilities on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

*People in federal detention centers on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

*People in federal and state prisons on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

*People in local jails and other municipal confinement facilities on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

PEOPLE IN GROUP HOMES AND RESIDENTIAL TREATMENT CENTERS FOR ADULTS

*People in group homes intended for adults (non-correctional)—*Counted at the facility.

*People in residential treatment centers for adults (non-correctional)—*Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

PEOPLE IN HEALTH CARE FACILITIES

*Patients in general or Veterans Affairs hospitals (except psychiatric units) on Thursday, April 1, 2010 (Census Day), including newborn babies still in the hospital on Census Day—*Counted at the residence where they live and sleep most of the time. Newborn babies should be counted at the residence where they will live and sleep most of the time.

*People in hospitals on Thursday, April 1, 2010 (Census Day) who have no usual home elsewhere—*Counted at the facility.

*People staying in in-patient hospice facilities on Thursday, April 1, 2010 (Census Day)—*Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

*People in mental (psychiatric) hospitals and psychiatric units for long-term non-acute care in other hospitals on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

*People in nursing facilities/skilled nursing facilities on Thursday, April 1, 2010 (Census Day)—*Counted at the facility.

PEOPLE IN JUVENILE FACILITIES

People in correctional facilities intended for juveniles on Thursday, April 1, 2010 (Census Day)—Counted at the facility.

People in group homes for juveniles (non-correctional) on Thursday, April 1, 2010 (Census Day)—Counted at the facility.

People in residential treatment centers for juveniles (non-correctional) on Thursday, April 1, 2010 (Census Day)—Counted at the facility.

PEOPLE IN RESIDENTIAL SCHOOL-RELATED FACILITIES

People in college/university student housing—Counted at the college/university student housing.

Boarding school students living away from their parental home while attending boarding school below the college level, including Bureau of Indian Affairs boarding schools—Counted at their parental home rather than at the boarding school.

People in residential schools for people with disabilities on Thursday, April 1, 2010 (Census Day)—Counted at the school.

PEOPLE IN SHELTERS

People in emergency and transitional shelters (with sleeping facilities) on Thursday, April 1, 2010 (Census Day) for people experiencing homelessness—Counted at the shelter.

People in living quarters for victims of natural disasters—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

People in domestic violence shelters on Thursday, April 1, 2010 (Census Day)—Counted at the shelter.

PEOPLE IN TRANSITORY LOCATIONS

People at transitory locations, such as recreational vehicle (RV) parks, campgrounds, hotels and motels (including those on military sites), hostels, marinas, racetracks, circuses, or carnivals—Counted at the residence where they live and sleep most of the time. If there is no residence where they live and sleep most of the time, they are counted where they live and sleep more than anywhere else. If time is equally divided, or if usual residence cannot be determined, they are counted at the place where they are staying on Thursday, April 1, 2010 (Census Day).

PEOPLE IN RELIGIOUS-RELATED RESIDENTIAL FACILITIES

People in religious group quarters, such as convents and monasteries—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

PEOPLE IN WORKERS' RESIDENTIAL FACILITIES

People in workers' group living quarters and Job Corps Centers—Counted at the residence where they live and sleep most of the time. If they do not have a residence where they live and sleep most of the time, they are counted at the facility.

Appendix H.

Characteristic Iterations

This appendix lists the 331 possible iterations for Summary File 2. The iterations comprise the total population, 75 race categories, 114 American Indian and Alaska Native categories (reflecting 60 tribal groupings), 47 Asian categories (reflecting 24 Asian groups), 43 Native Hawaiian and Other Pacific Islander categories (reflecting 22 Native Hawaiian and Other Pacific Islander groups) and 51 Hispanic/not Hispanic groups. In order for any of the tables (matrices) for a specific group to be shown in Summary File 2, the data must meet a minimum population threshold. For Summary File 2, all tables (matrices) are repeated for each race group, American Indian and Alaska Native tribal grouping, and Hispanic or Latino group if there are 100 or more people of that specific group in a particular geographic area. For example, if there are 100 or more people tabulated as "Vietnamese alone" in County A, then all tables for "Vietnamese alone" are shown in Summary File 2 for County A.

There are several concepts used to tabulate race information in the census for the six major race categories (White; Black or African American; American Indian or Alaska Native; Asian; Native Hawaiian or Other Pacific Islander; and Some Other Race) and various details within.

The concept "race alone" includes people who reported a single entry (e.g., Korean) and no other race, as well as people who reported two or more entries within the same major race group (e.g., Asian). For example, respondents who reported Korean and Vietnamese are part of the larger "Asian alone" race group.

For the major race groups, the concept "race alone or in combination" includes people who reported a single race alone (e.g., Asian) and people who reported that race in combination with one or more of the other major race groups (e.g., White, Black or African American, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, and Some Other Race). The concept "race alone or in combination," therefore, represents the maximum number of people who reported as that major race group, either alone, or in combination with another race(s). The sum of the six individual race "alone or in combination" categories may add to more than the total population because people who reported more than one race were tallied in each race category.

The concept "race alone or in any combination" applies only to detailed race iteration groups, such as American Indian and Alaska Native tribes, detailed Asian groups, and detailed Native Hawaiian and Other Pacific Islander groups. For example, Korean alone or in any combination includes people who reported a single response (e.g., Korean), people who reported Korean and another Asian group (e.g., Korean and Vietnamese), and people who reported Korean in combination with one or more other non-Asian race groups (e.g., Korean **and** White).

The American Indian categories shown represent tribal groupings, which refer to the combining of individual American Indian tribes, such as Fort Sill Apache, Mescalero Apache, and San Carlos Apache into the general Apache tribal grouping.

The Alaska Native categories shown represent tribal groupings, which refer to the combining of individual Alaska Native tribes such as King Salmon Tribe, Native Village of Kanatak, and Sun'aq Tribe of Kodiak into the general Aleut tribal grouping.

The category "Two or More Races" refers to combinations of two or more of the six major race categories, and provides 57 unique race combinations. Within this approach, a response of "White" and "Asian" was tallied as Two or More Races, while a response of "Korean" and "Vietnamese" was not because "Korean" and "Vietnamese" are both Asian responses.

For this census, Hispanic origins are not races. People who identified their origin as Hispanic, Latino, or Spanish may be of any race.

Iteration Code 160 (Black or African American; American Indian and Alaska Native; Asian; Native Hawaiian and Other Pacific Islander; Some Other Race) is on the iteration list because it appears on the Redistricting Data File. However, it does not meet the 100 person threshold so no data will be shown for this group in SF 2.

Please note that the groups listed below have a corresponding characteristic iteration code, shown in the first column. In the summary file, these codes are located in the characteristic iteration (CHARITER) field of the geographic header record. In American FactFinder, the data user will be able to pick from a list of population groups.

Iteration Code	Iterations
001	Total Population
002	White alone
003	White alone or in combination with one or more other races
004	Black or African American alone
005	Black or African American alone or in combination with one or more other races
006	American Indian and Alaska Native alone (300, A01–Z99)
278	American Indian tribes, specified, alone (A01–M38, T01–Z99)
204	Apache alone (A09–A23)
279	Arapaho alone (A24–A33)
280	Assiniboin Sioux alone (A38–A44)
206	Blackfeet alone (A45–A50)
281	Canadian and French American Indian alone (T01–V23)
282	Central American Indian alone (V24–V83)
320	Cherokee alone (B21–B39)
210	Cheyenne alone (B40–B45)
212	Chickasaw alone (B53–B56)
214	Chippewa alone (B67–B99)
216	Choctaw alone (C08–C16)
218	Colville alone (C35–C38)
220	Comanche alone (C39–C43)
222	Cree alone (C59–C63)
224	Creek alone (C64–C80)
226	Crow alone (C83–C86)
228	Delaware alone (C93–D04)
285	Eastern Tribes alone (D20–D26, D28–D41)
286	Hopi alone (D74–D75)
232	Houma alone (D78–D86)
234	Iroquois alone (D93–E09)
236	Kiowa alone (E30–E36)
240	Lumbee alone (E78–E83)
242	Menominee alone (F11–F14)
288	Mexican American Indian alone (V84–W66)
244	Navajo alone (F62–F70)
246	Osage alone (G04–G09)
248	Ottawa alone (G14–G22)
250	Paiute alone (G23–G49)
252	Pima alone (G84–G91)
254	Potawatomi alone (H21–H33)
321	Pueblo alone (H38, H40, H42–H65)

	American Indian and Alaska Native alone (300, A01–Z99)—Con.
	American Indian tribes, specified, alone (A01–M38, T01–Z99)—Con.
258	Puget Sound Salish alone (H70–H92)
260	Seminole alone (J47–J57)
295	Shawnee alone (J66–J73)
262	Shoshone alone (J81–J92)
322	Sioux alone (K16–K21, K23–K53)
296	South American Indian alone (W67–X24)
297	Spanish American Indian alone (X25–Z99)
323	Tohono O’Odham alone (K78–K86)
270	Ute alone (L06–L14)
272	Yakama alone (L79–L84)
274	Yaqui alone (L91–L99)
276	Yuman alone (M22–M33)
187	Alaska Native tribes, specified, alone (M52–R98, S01–S99)
200	Alaskan Athabaskan alone (M52–N27)
202	Aleut alone (R11–R98, S01–S99)
188	Inupiat alone (N67–P29, P33–P37)
324	Tlingit–Haida alone (N28–N55, N59–N66)
189	Tsimshian alone (N56–N58)
190	Yup’ik alone (P30–P32, P38–R10)
009	American Indian and Alaska Native alone or in combination with one or more other races (300, A01–Z99) & (100–299) or (300, A01–Z99) or (400–999)
193	American Indian tribes, specified, alone or in any combination (A01–M38, T01–Z99) & (100–299) or (300, A01–Z99) or (400–999)
205	Apache alone or in any combination (A09–A23) & (100–299) or (300, A01–Z99) or (400–999)
194	Arapaho alone or in any combination (A24–A33) & (100–299) or (300, A01–Z99) or (400–999)
195	Assiniboine Sioux alone or in any combination (A38–A44) & (100–299) or (300, A01–Z99) or (400–999)
207	Blackfeet alone or in any combination (A45–A50) & (100–299) or (300, A01–Z99) or (400–999)
196	Canadian and French American Indian alone or in any combination (T01–V23) & (100–299) or (300, A01–Z99) or (400–999)
197	Central American Indian alone or in any combination (V24–V83) & (100–299) or (300, A01–Z99) or (400–999)
325	Cherokee alone or in any combination (B21–B39) & (100–299) or (300, A01–Z99) or (400–999)
211	Cheyenne alone or in any combination (B40–B45) & (100–299) or (300, A01–Z99) or (400–999)
213	Chickasaw alone or in any combination (B53–B56) & (100–299) or (300, A01–Z99) or (400–999)
215	Chippewa alone or in any combination (B67–B99) & (100–299) or (300, A01–Z99) or (400–999)
198	Chippewa Cree alone or in any combination (C01–C04) & (100–299) or (300, A01–Z99) or (400–999)
217	Choctaw alone or in any combination (C08–C16) & (100–299) or (300, A01–Z99) or (400–999)
199	Chumash alone or in any combination (C20–C24) & (100–299) or (300, A01–Z99) or (400–999)
219	Colville alone or in any combination (C35–C38) & (100–299) or (300, A01–Z99) or (400–999)
221	Comanche alone or in any combination (C39–C43) & (100–299) or (300, A01–Z99) or (400–999)

American Indian and Alaska Native alone or in combination with one or more other races (300, A01–Z99) & (100–299) or (300, A01–Z99) or (400–999)—Con.
American Indian tribes, specified, alone or in any combination (A01–M38, T01–Z99) & (100–299) or (300, A01–Z99) or (400–999)—Con.

223	Cree alone or in any combination (C59–C63) & (100–299) or (300, A01–Z99) or (400–999)
225	Creek alone or in any combination (C64–C80) & (100–299) or (300, A01–Z99) or (400–999)
227	Crow alone or in any combination (C83–C86) & (100–299) or (300, A01–Z99) or (400–999)
